Background & Objectives

- Statement of Problem
- Research Goals
- Research Hypotheses
- Study Objectives

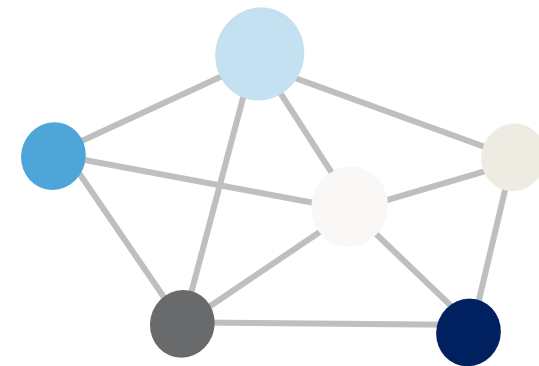

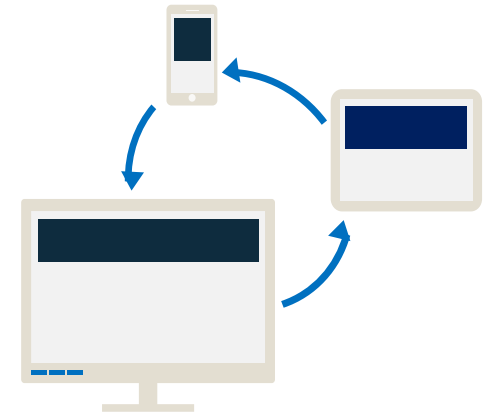

Statement of Problem

Digital connectivity among the residents of Seattle is not maximized.

- This lack of digital connectedness is a result of inequitable access to the internet, devices, and digital skills.

We accept that an increase in digital access for Seattle residents will result in a **healthier populace**, including one that has:

- More civically and socially engaged residents;
- Lowered rates of poverty;
- Higher levels of education and employment;
- And ultimately, a higher quality of life.

Research Goals

Achieve a complete understanding of the current level of the City of Seattle's digital connectedness, particularly for communities of color, non-English speakers, people with disabilities, older adults, and other communities most impacted by the digital divide.

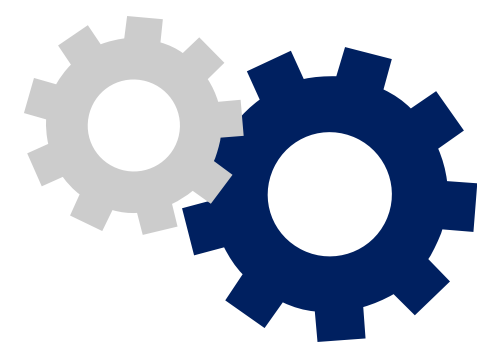

Previous national studies have found a link between home broadband Internet adoption and educational success, greater household incomes, and improved access to government and health resources.

Recognizing this, the City of Seattle hopes to:

- Identify strategic and tactical opportunities to increase levels of digital connectedness;
- Lower the digital equity divide; and
- Ultimately ensure digital equity for all residents.

Research Hypotheses

Hypothesis #1

City residents will **naturally adopt and use an increasing number of technology platforms** as their activities of daily living become increasingly digitized – creating regular opportunities for individuals to interact digitally. The converse of this, however, is that **an increasingly digitized environment may accelerate or widen the digital equity gap** for those who cannot (or choose to not) adopt quickly enough.

Therefore, the City's focus should be:

1. **Increasing access to Internet connectivity and devices** to all groups, especially to those who are underserved.
2. **Installing and increasing programs for focused and targeted skill set development** in order to bring all residents to a level needed by their situation and what they need to accomplish in their daily lives.

Hypothesis #2

City residents, in every demographic category, are **accelerating their usage of wireless smartphones and their personal wireless/cellular networking capabilities**. This phenomenon will continue to grow and overlap with broadband access.

Certain groups may be **more likely to rely solely on wireless/cellular networks**, and this has implications for technology planning and technology interventions intent on increasing digital engagement.

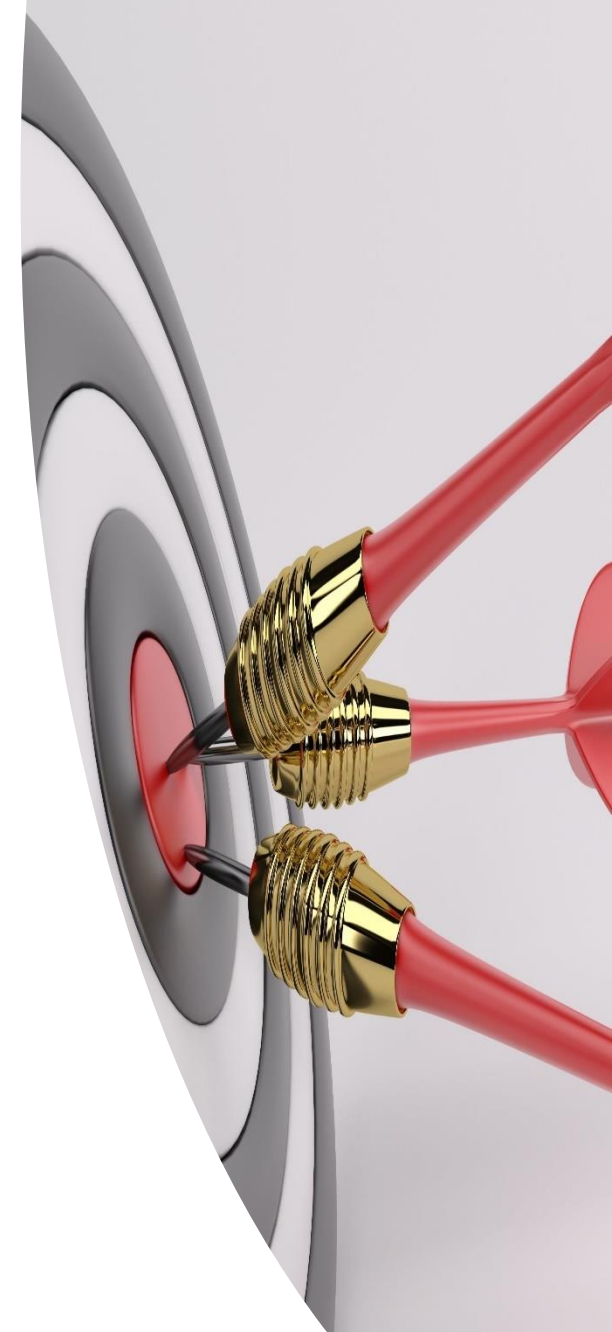

Hypothesis #3

City residents who are not currently digitally connected, or who are under-connected, are experiencing at least one of the following:

- Living in areas where broadband or wireless **connectivity is limited**.
- Paying for personal broadband or wireless **connectivity is too expensive (may be a real or perceived economic barrier)**.
- **Identify with groups of people who are currently underserved** by broadband providers and community partners (e.g. minorities, elderly, immigrant/refugee, non-English or Spanish speakers, insecurely housed, living at or below the poverty level, and/or living with or supporting someone with a disability).
- **Lack the skill set** or comfort level to fully engage digitally.

Study Objectives

- A. Quantify and describe Seattle's level of digital engagement, digital divide, and level and source of digital inequality (city-wide and by council district).
- B. Explore the linkages between digital inequality and socioeconomic, demographic, and psychographic factors.
- C. Discover/profile digital equity and digital connectedness segments within the City of Seattle population. Understand the interrelationships between variables and factors both from a predictive and prescriptive point of view.
- D. Understand from a causal point of view the digital divide and how these contributory factors have changed. Attempt to predict how the divide will continue to evolve over the course of the next five years.
- E. Identify opportunities for targeted and strategic interventions to increase digital engagement levels at a faster pace than that which would occur naturally.

Study Methodology

- Methodology and Sample Groups
- Research Caveats
- Weighting Summary
- Comparison to Census Results on Internet Subscriptions and Types of Devices in the Home

Methodology

A total of 4,315 surveys were collected from May 23rd through June 25th, 2018, representing 4,315 Seattle households and 10,358 Seattle residents.

- Conducted as a multi-mode survey: across mail, online, telephone, and in-person.
- Completed in both English (4,312 surveys) and Spanish (3 surveys).
- The overall average length of the online surveys was 34.0 minutes.
- The overall survey response was 18% (e.g. 18% of those invited to respond returned a survey).
- 15 returned surveys were excluded from the total results due to extensive incomplete data.

All eligible respondents are:

- Individuals living within Seattle city limits;
- Able to conduct the survey in either English or Spanish;
- Has the ability to complete the survey via mail with paper and pencil or pen, online via computer, tablet, or smartphone, or in-person via paper and pencil or pen; and
- Able to answer on behalf of the whole household on their use of technology and the internet (though if they needed help completing the survey, they could ask another household member or the survey helpline to assist them).

Sample Groups

A stratified sampling plan across five distinct demographic/geographic groups (and within that the seven Council Districts) was used in order to maximize representativeness and inclusivity.

General Population

Mail-in Paper: n1,979

Online: n958

Residents were selected from a stratified sampling plan, which pulled equal amounts of sample from each of the seven council districts. Addresses were identified via Address-Based Sample (ABS) and pulled randomly and proportionate to the total population number within each council district.

Targeted Low Income Population

Mail-in Paper: n258

Online: n127

Residents were selected among census tracts that are predominately lower socio-economic status (SES). Addresses were identified within these census tracts via Address-Based Sample (ABS) and pulled randomly and proportionate to the total population number within each census tract.

SHA Housing Population

Mail-in Paper: n230

Online: n44

Residents were selected among all Seattle Housing Authority (SHA) owned properties in the City of Seattle. Addresses were identified within these buildings and communities via Address-Based Sample (ABS) and pulled randomly and proportionate to the total population number of those living in SHA owned properties, with the exception of limiting the largest communities to no more than 5% of the group.

Living in City Sanctioned Tiny Home Villages

In-Person Paper: n50

The City of Seattle IT team coordinated with the Human Services Department to distribute and collect paper surveys among residents of sanctioned tiny-home villages in the city limits. The surveys were distributed to the residents of the villages with guidelines to have one survey per household, though multiple responses were possible.

Seattle Public Schools Parents/Guardians

Online: n669

An email invitation was sent to 31,554 parents or guardians of Seattle Public School students which invited them to respond online. Duplicate individuals within each household were identified and only one email address per household received the invitation and reminder emails.

Research Caveats

Surveys based on random samples are subject to sampling error, due to the fact that not everyone in the entire population was surveyed. The reliability of survey results is often reported as a range within which the actual result is expected to fall. This range is based on a specified level of probability. For this report, that level of probability is 95 percent.

Data based on the total sample of 4,315 has a sampling error of $\pm 1.5\%$ at the 95 percent statistical significance threshold. Thus, if a result of 50 percent is attained based on this sample, we can be sure, 95 percent of the time (or 19 times out of 20), that the result of a census would be between 48.5 percent and 51.5 percent.

Data based on sub-groups is subject to greater margins of error. Examples of sub-groups and the associated margins of error are:

	Base for Percentages	Margin of Error*
Total	4,315	$\pm 1.5\%$
Low Income Census Tract Audience	385	$\pm 5.0\%$
(e.g.) Smaller groups of respondents	100	$\pm 9.8\%$

* For a result of 50% at a 95% confidence interval

Percentages may not sum to 100 percent due to rounding and allowable multiple responses. Unless otherwise noted, percentages shown are of the responding population. Base size varies. The total sample data is weighted, and proportions shown reflects weighted data. Base sizes shown reflect unweighted data.

Ensuring Inclusivity

To meet the project study mandate of representing all of Seattle, we collected responses from a wide range of residents including the following groups:

*Limited sample size. Sub-segment analysis warrants further research and/or a large sample size. Respondents that are "Insecurely Housed" are primarily composed of those living in city sanctioned tiny-home villages.

Weighting

- The 2018 Seattle Connectedness study is a survey of households that collects data on the **individual** responding to the survey as well as the entire **household**. In the latter case, the individual responding is asked to provide data for their entire household.
- To account for this difference in perspective, we classified each question in the survey as a household characteristic (e.g. household size and income) or an individual characteristic (e.g. age, gender, and ethnicity).
- Once classified, we applied either a household post-hoc weighting scheme based to the total population of Seattle households (319,125 based on the 2016 American Community Survey) or an individual post-hoc weighting scheme based to the total population of Seattle residents (657,398 based on the 2016 American Community Survey).
- This is an important distinction to make as it has implications on how the data should be interpreted. For example, we have selected to calculate how many households have adequate internet access rather than individuals because the adequacy of the internet connection where the survey respondent lives impacts all members of the household, not just the individual respondent. On the other hand, we have selected to calculate how individual respondents rely on others to access and use the internet and devices since this reliance may vary across household members. In this case, the survey respondent was asked to only respond about their own personal reliance on others (if any).
- Notes in the report footers have been added to indicate if the data is expressed as an individual characteristic weighted to the total population of Seattle residents or as a household characteristic weighted to the total population of Seattle households.

Individual Weighting

- The individual post-hoc weighting scheme was used to balance data on individual-level characteristics to the total population of Seattle residents (not households).
- This weighting scheme includes age, gender, ethnicity, education, and council district.

AGE	Weighted Proportion	Unweighted Proportion	GENDER	Weighted Proportion	Unweighted Proportion
Ages 18-34	39%	17%	Male	50%	46%
Ages 35-54	33%	41%	Female	49%	52%
Ages 55-64	14%	17%	Gender non-conforming*	1%	2%
Ages 65 and older	14%	24%	EDUCATION	Weighted Proportion	Unweighted Proportion
ETHNICITY	Weighted Proportion	Unweighted Proportion	Less than HS Grad	6%	2%
White	66%	77%	HS Grad and Some College	33%	24%
Black	7%	4%	Bachelor's Degree or Higher	61%	74%
Hispanic	7%	4%	COUNCIL DISTRICT	Weighted Proportion	Unweighted Proportion
Asian	14%	10%	Council District 1	13%	15%
Nat. HI/ Pacific Islander	<1%	<1%	Council District 2	14%	14%
Am. Indian/ Alaska Native	<1%	<1%	Council District 3	14%	12%
Other	<1%	<1%	Council District 4	14%	14%
Mixed	5%	4%	Council District 5	15%	18%
			Council District 6	14%	15%
			Council District 7	15%	11%

*Gender non-conforming / genderqueer / non-binary

Household Weighting

- The household post-hoc weighting scheme was used to balance data on household-level characteristics to the total population of Seattle households (not residents/individuals).
- This weighting scheme includes council district, household income, any children in the household (HH), any children enrolled in an SPS (Seattle Public Schools) in the household, and those living in an SHA (Seattle Housing Authority) owned or managed property.

COUNCIL DISTRICT	Weighted Proportion	Unweighted Proportion	HOUSEHOLD INCOME	Weighted Proportion	Unweighted Proportion
Council District 1	12%	15%	Below \$25,000	17%	17%
Council District 2	11%	14%	\$25,000-\$49,999	18%	14%
Council District 3	16%	12%	\$50,000-\$74,999	15%	13%
Council District 4	14%	14%	\$75,000-\$99,999	12%	12%
Council District 5	14%	18%	\$100,000-\$149,999	17%	19%
Council District 6	14%	15%	\$150,000-\$199,999	9%	10%
Council District 7	19%	11%	\$200,000+	12%	15%
CHILDREN IN HH	Weighted Proportion	Unweighted Proportion	LIVING IN SHA PROPERTY	Weighted Proportion	Unweighted Proportion
Children under 18 in HH	24%	39%	Yes	3%	6%
No Children under 18 in HH	76%	61%	No	97%	94%
CHILDREN IN SPS IN HH	Weighted Proportion	Unweighted Proportion			
Children under 18 in HH	10%	23%			
No Children under 18 in HH	90%	77%			

Responses by Council Districts

Council District	*n=	%
Council District 1 (West Seattle/ South Park)	632	15%
Council District 2 (South Seattle)	610	14%
Council District 3 (Central Seattle)	527	12%
Council District 4 (Northeast Seattle)	582	14%
Council District 5 (North Seattle)	775	18%
Council District 6 (Northwest Seattle)	649	15%
Council District 7 (Pioneer Square to Magnolia)	476	11%

n=64, Not classified

*Unweighted values

When compared to census (2017 ACS) data, the Connectedness Study shows Seattle residents are continuing a path towards ubiquitous digital adoption.

Since 2017, there has been an increase in the number of households (HHs) reporting an internet capable device (from 95% to 98%). On the other hand, there has been a significant decline in households reporting they have no paid internet subscription (from 9% to 6%).

	2017 American Community Survey (Census)	Seattle Connectedness Study 2018		2017 American Community Survey (Census)	Seattle Connectedness Study 2018		2017 American Community Survey (Census)	Seattle Connectedness Study 2018
Any device	95%	98% ↑	Smartphone with no other type of computing device	3%	3%		With any broadband subscription	90% 92%
Desktop/Laptop	89%	92% ↑	Tablet or other portable wireless computer in HH	70%	64% ↓		With fixed broadband subscription (cable, DSL, etc.)	84% 88% ↑
Desktop/Laptop with no other type of computing device	3%	3%	No device	5%	2% ↓		Cellular data plan with no other type of internet subscription	6% 4%
Smartphone/Mobile phone	89%	93% ↑					Without an internet subscription	9% 6% ↓

Base: Total (n4315) – Household Weight.
Q2 - Please tell us about the technology devices you have in the place where you live. Does your household have one or more of?
Base: Total Answering (n4273) – Household Weight.
Q4 - What are all the ways you get internet in the place where you live?

*Other types of internet services (including dial-up and satellite internet services are not included in this table).

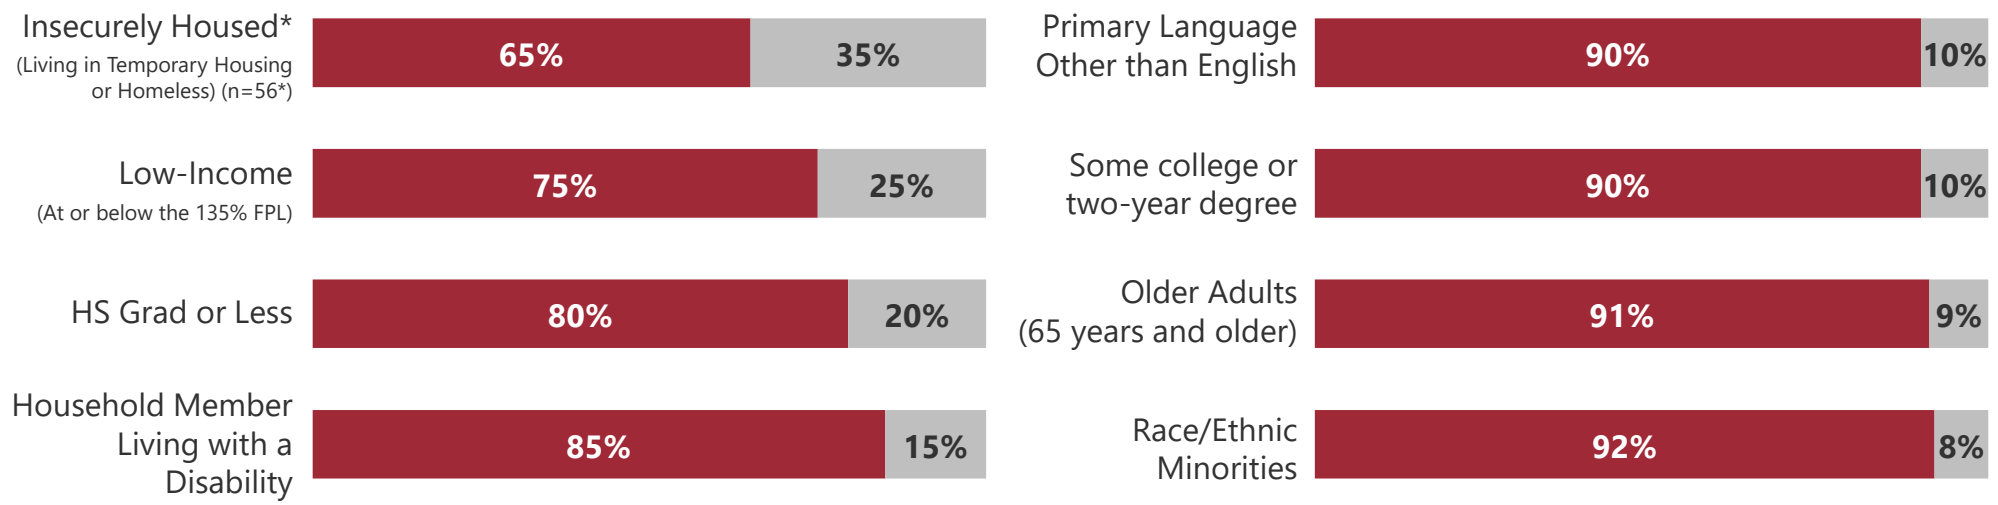

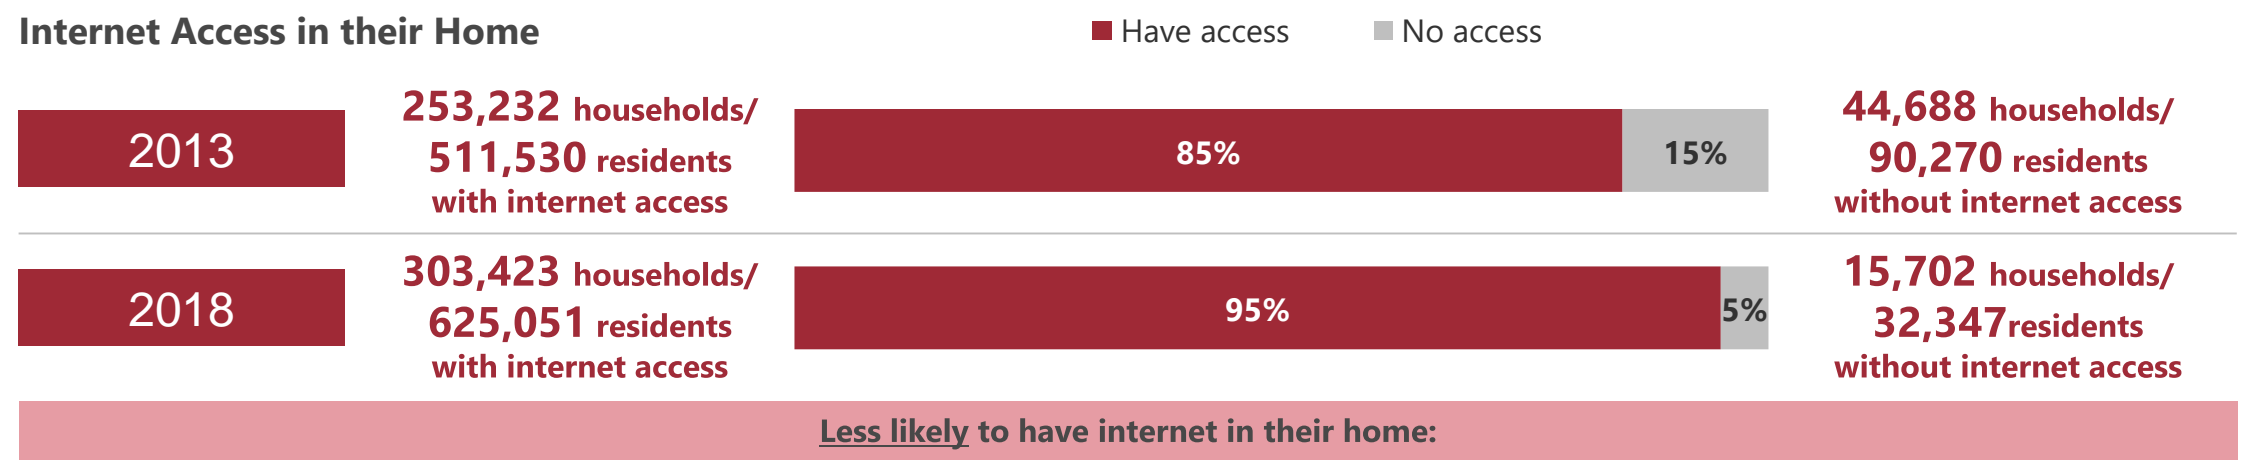

↑ = Sig. Higher than at Least One Other Group Shown ↓ = Sig. Lower than at Least One Other Group Shown

Digital Access and Devices

- Internet Access in Place of Residence
- Types of Devices in Household
- Typical Download Speed of Internet Connection
- Adequacy of the Internet Access

Compared to 2013, significantly more Seattle residents report internet access in their home (an increase from 85% of residents in 2013 to 95% in 2018).

Key groups, including many underserved and/or high needs segments, lag behind the general population when it comes to internet access in the home.

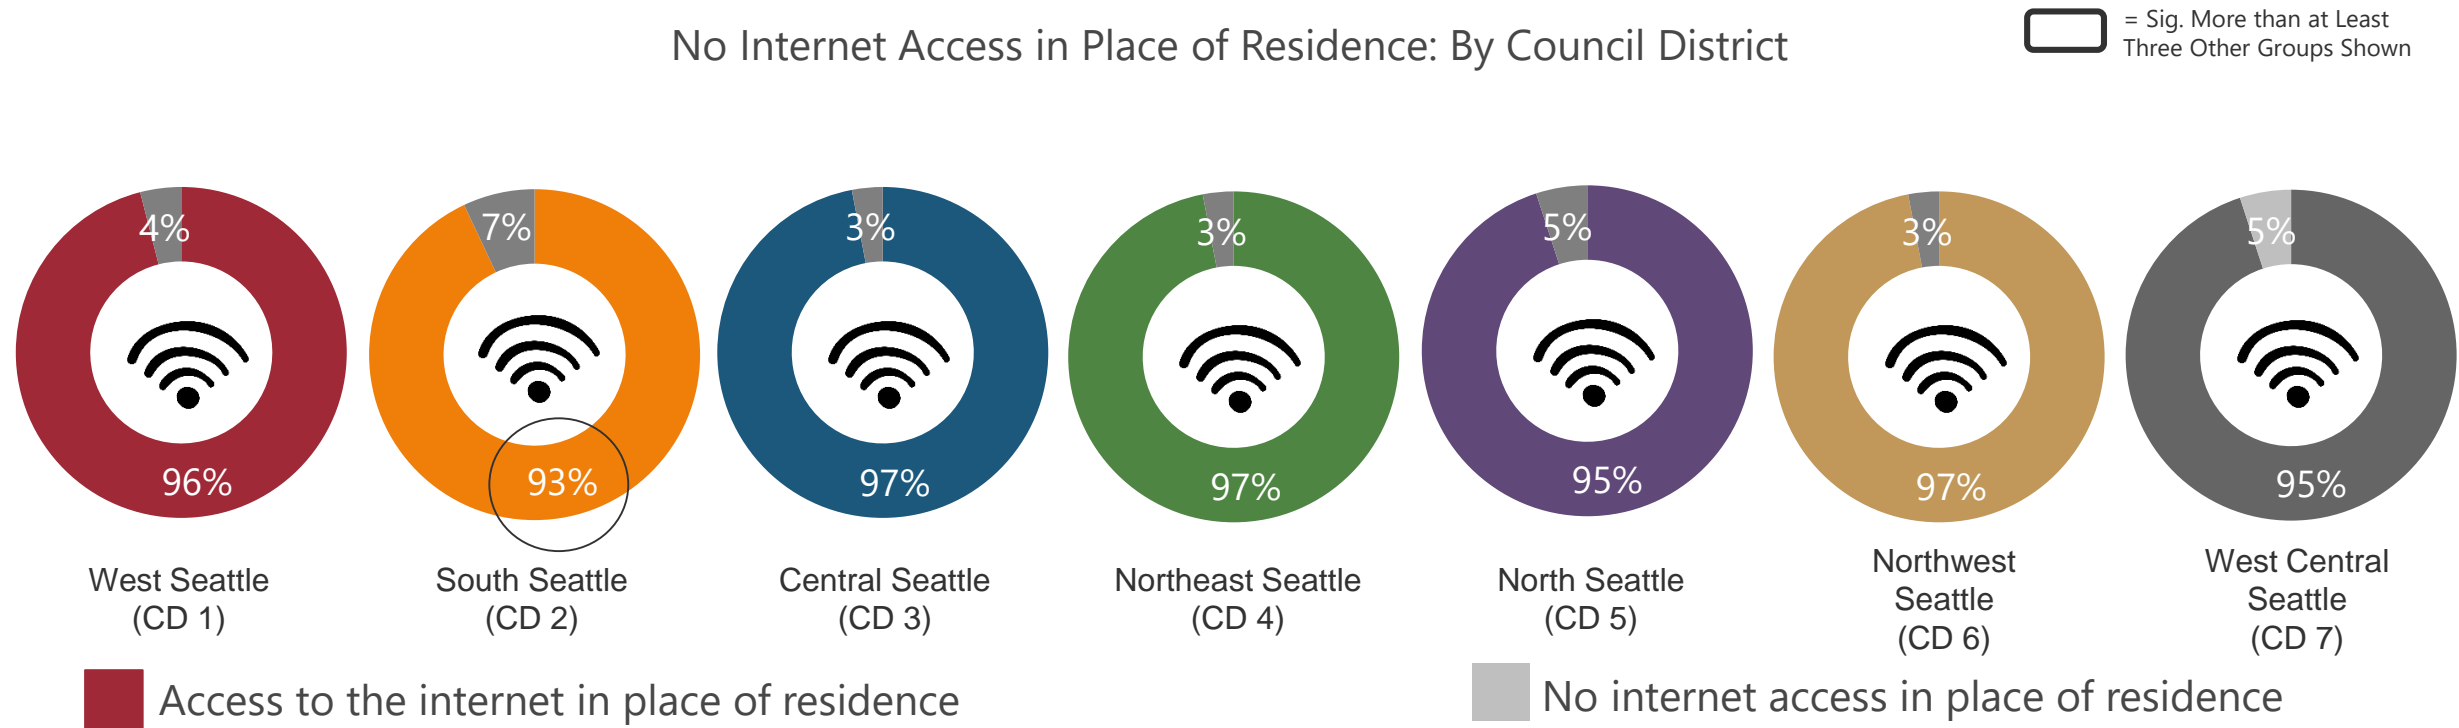

Specific Race/Ethnic Comparison:
Compared to White residents, Black and Hispanic residents are significantly more likely to be without internet access where they live, (12% Black, 9% Hispanic residents vs. 4% White residents). Asian residents (6%) are right at the average for the city as a whole.

Base: Total Answering – Total Pop (n4315). Household Weight.
*Limited sample size. Sub-segment analysis warrants further research and/or a large sample size.
Q1 - Does your household have a way to access the internet in the place where you currently live?

South Seattle (CD 2) reports a significantly lower rate of internet access (93% with internet) than most other Council Districts.

Central, NE and NW Seattle (CDs 3, 4, and 6) have the highest rates, with 97 percent of the population reporting an in-home way to access the internet.

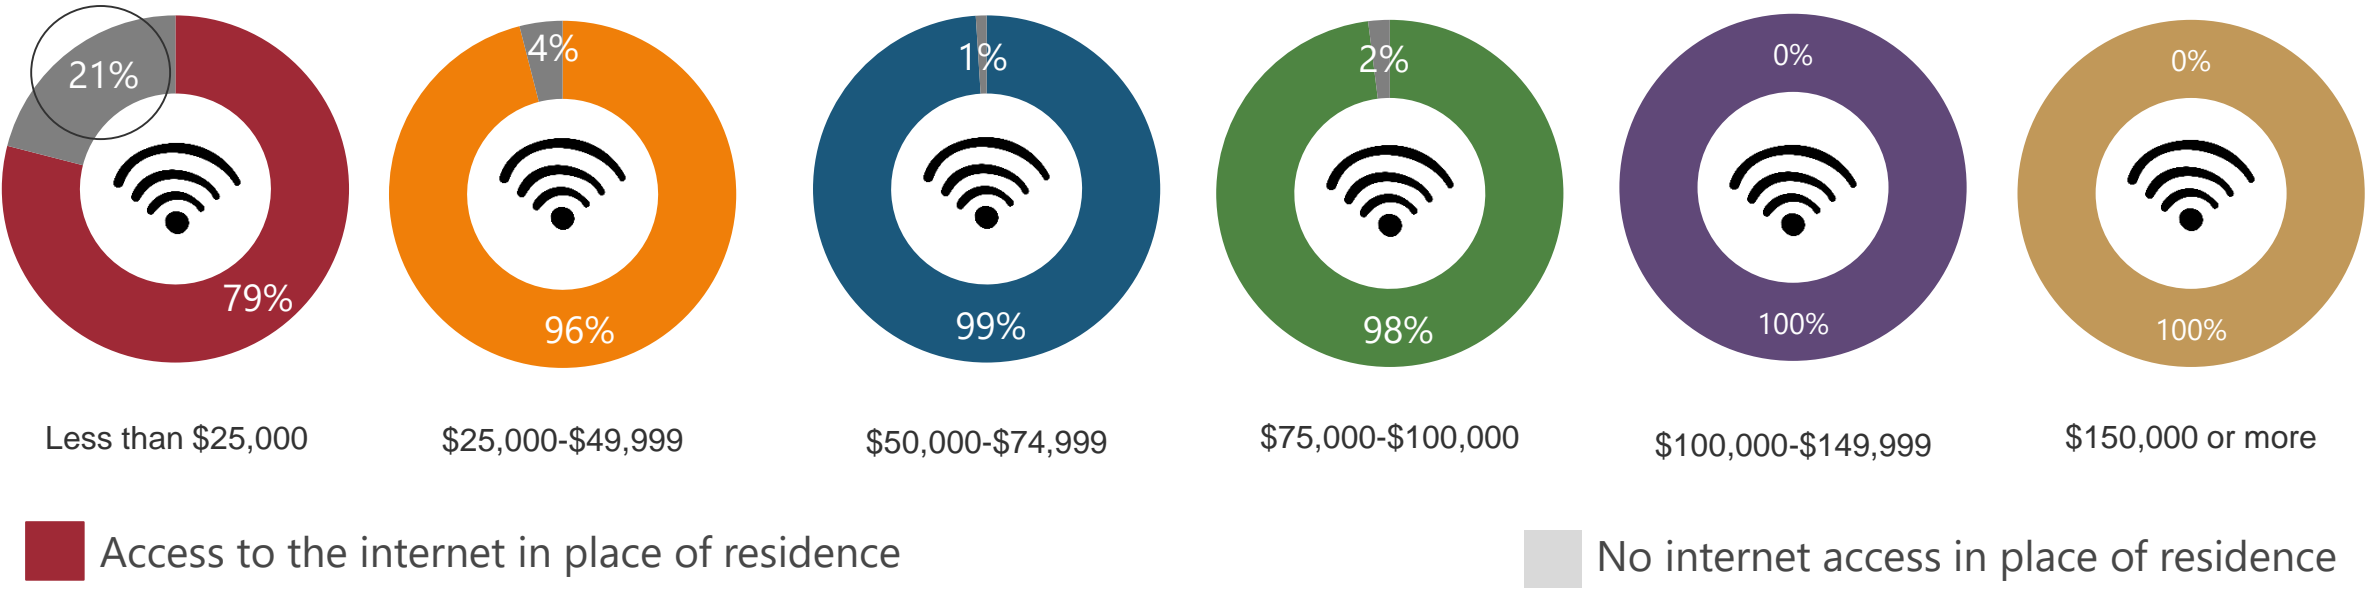

More than one out of five households with incomes under \$25,000 do not have internet access where they live.

Nearly all households with incomes over \$50,000 have internet access.

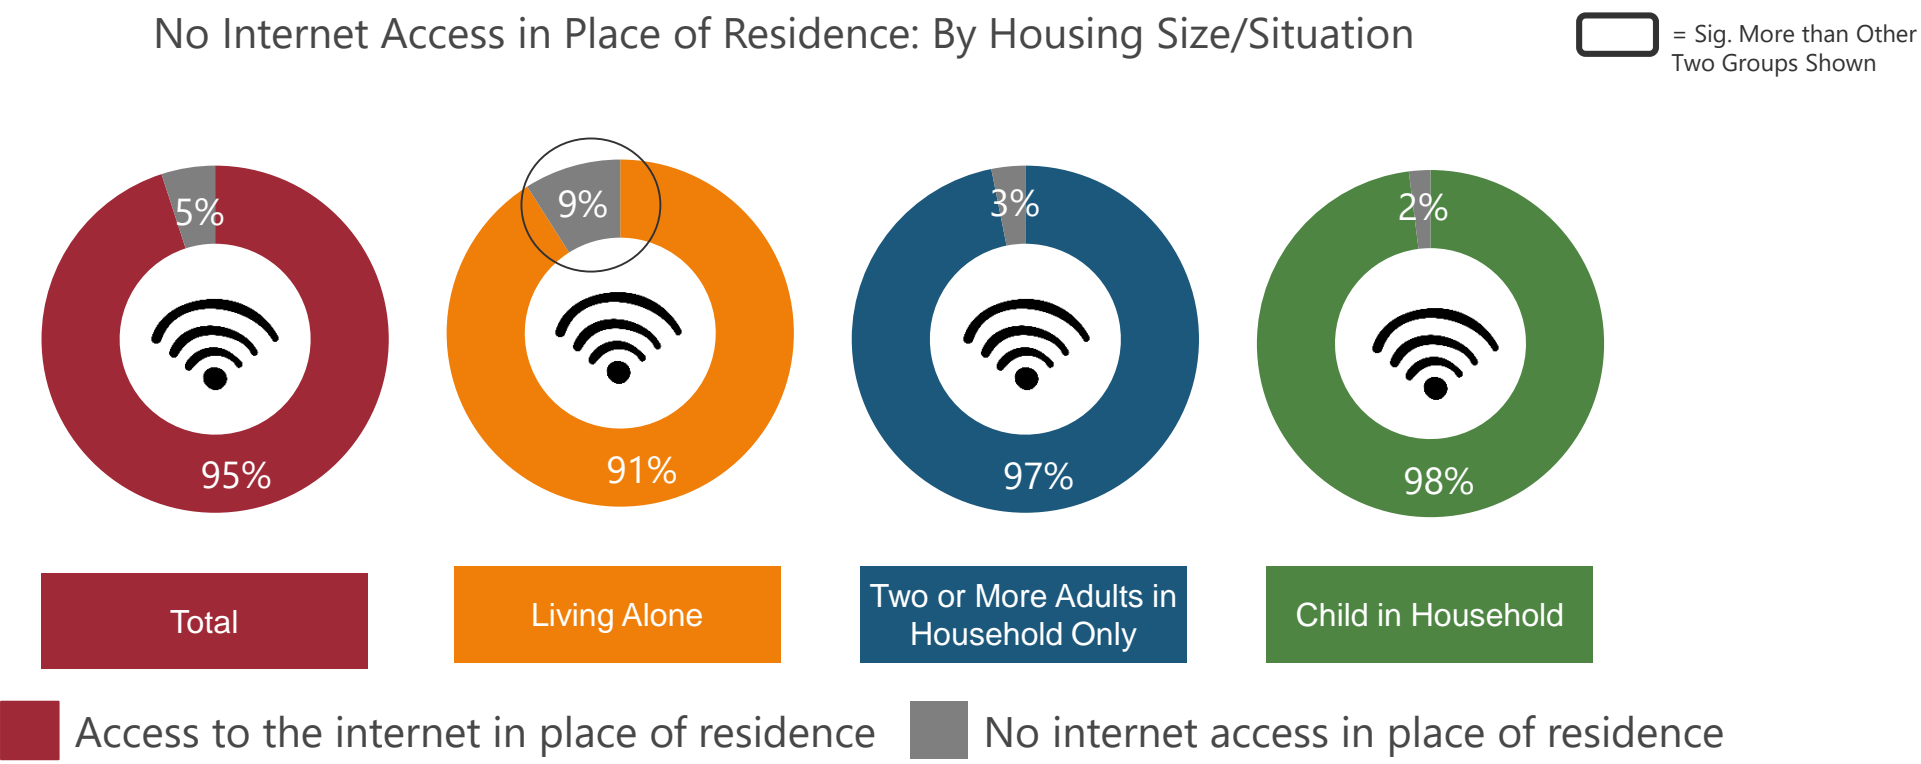

No Internet Access in Place of Residence: By Income

 = Sig. More than All Other Groups Shown

Base: Total Answering – <\$25K (n611), \$25K-\$50K (n502), \$50K-\$75K (n472), \$75K-\$100K (n434), \$100K-\$150K (n694), \$150K+ (n903). Household Weight.
Q1 - Does your household have a way to access the internet in the place where you currently live?

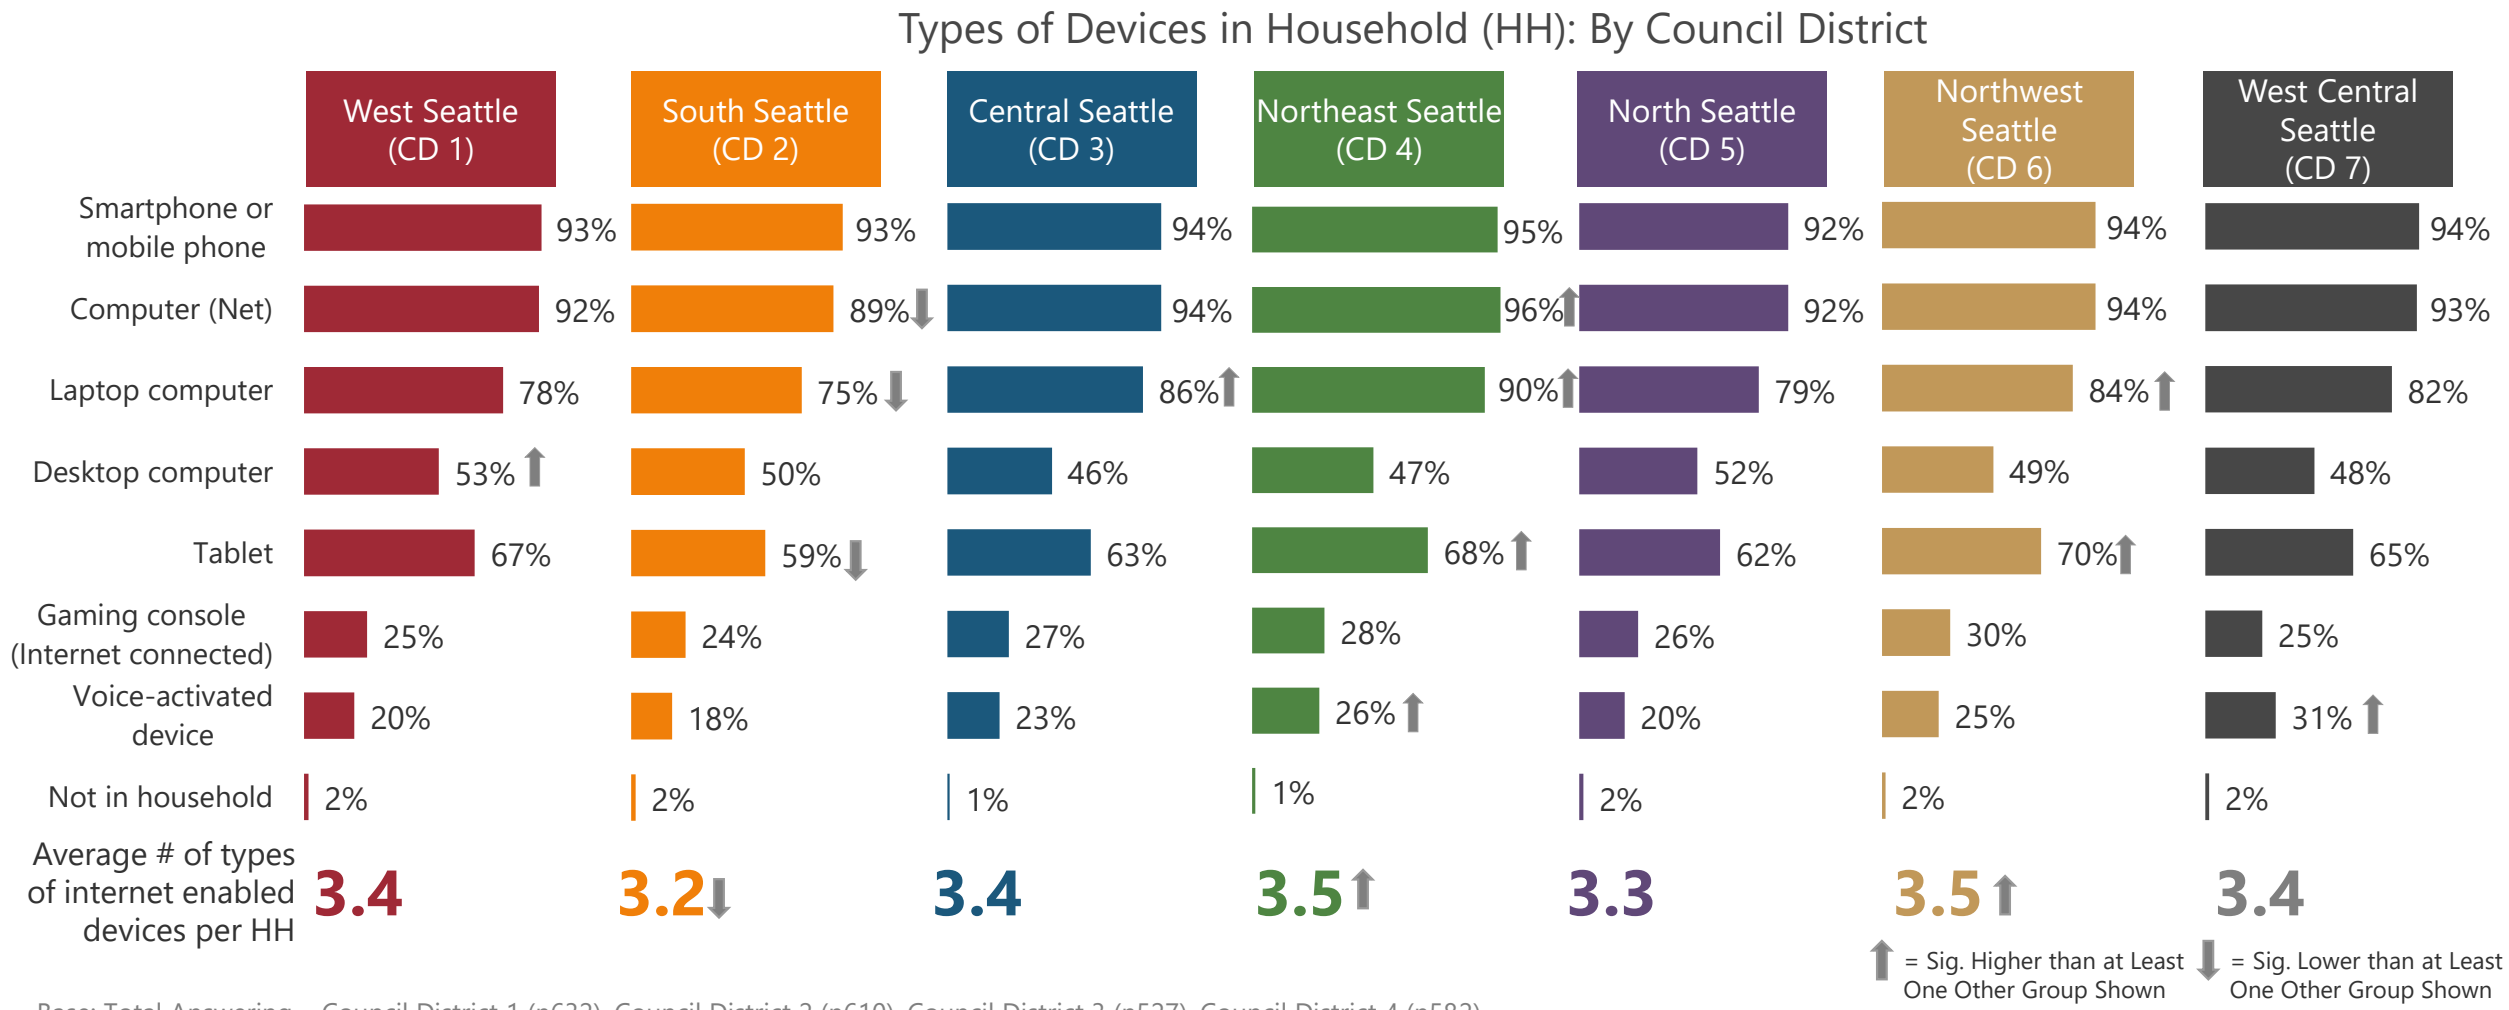

Households with only one adult are significantly less likely to have internet at home than larger households.

Base: Total Answering – Total Pop (n4315), Living Alone (n1122), Two or More Adults in Household Only (n1194), Child in Household (n1454). Household Weight.
Q1 - Does your household have a way to access the internet in the place where you currently live?

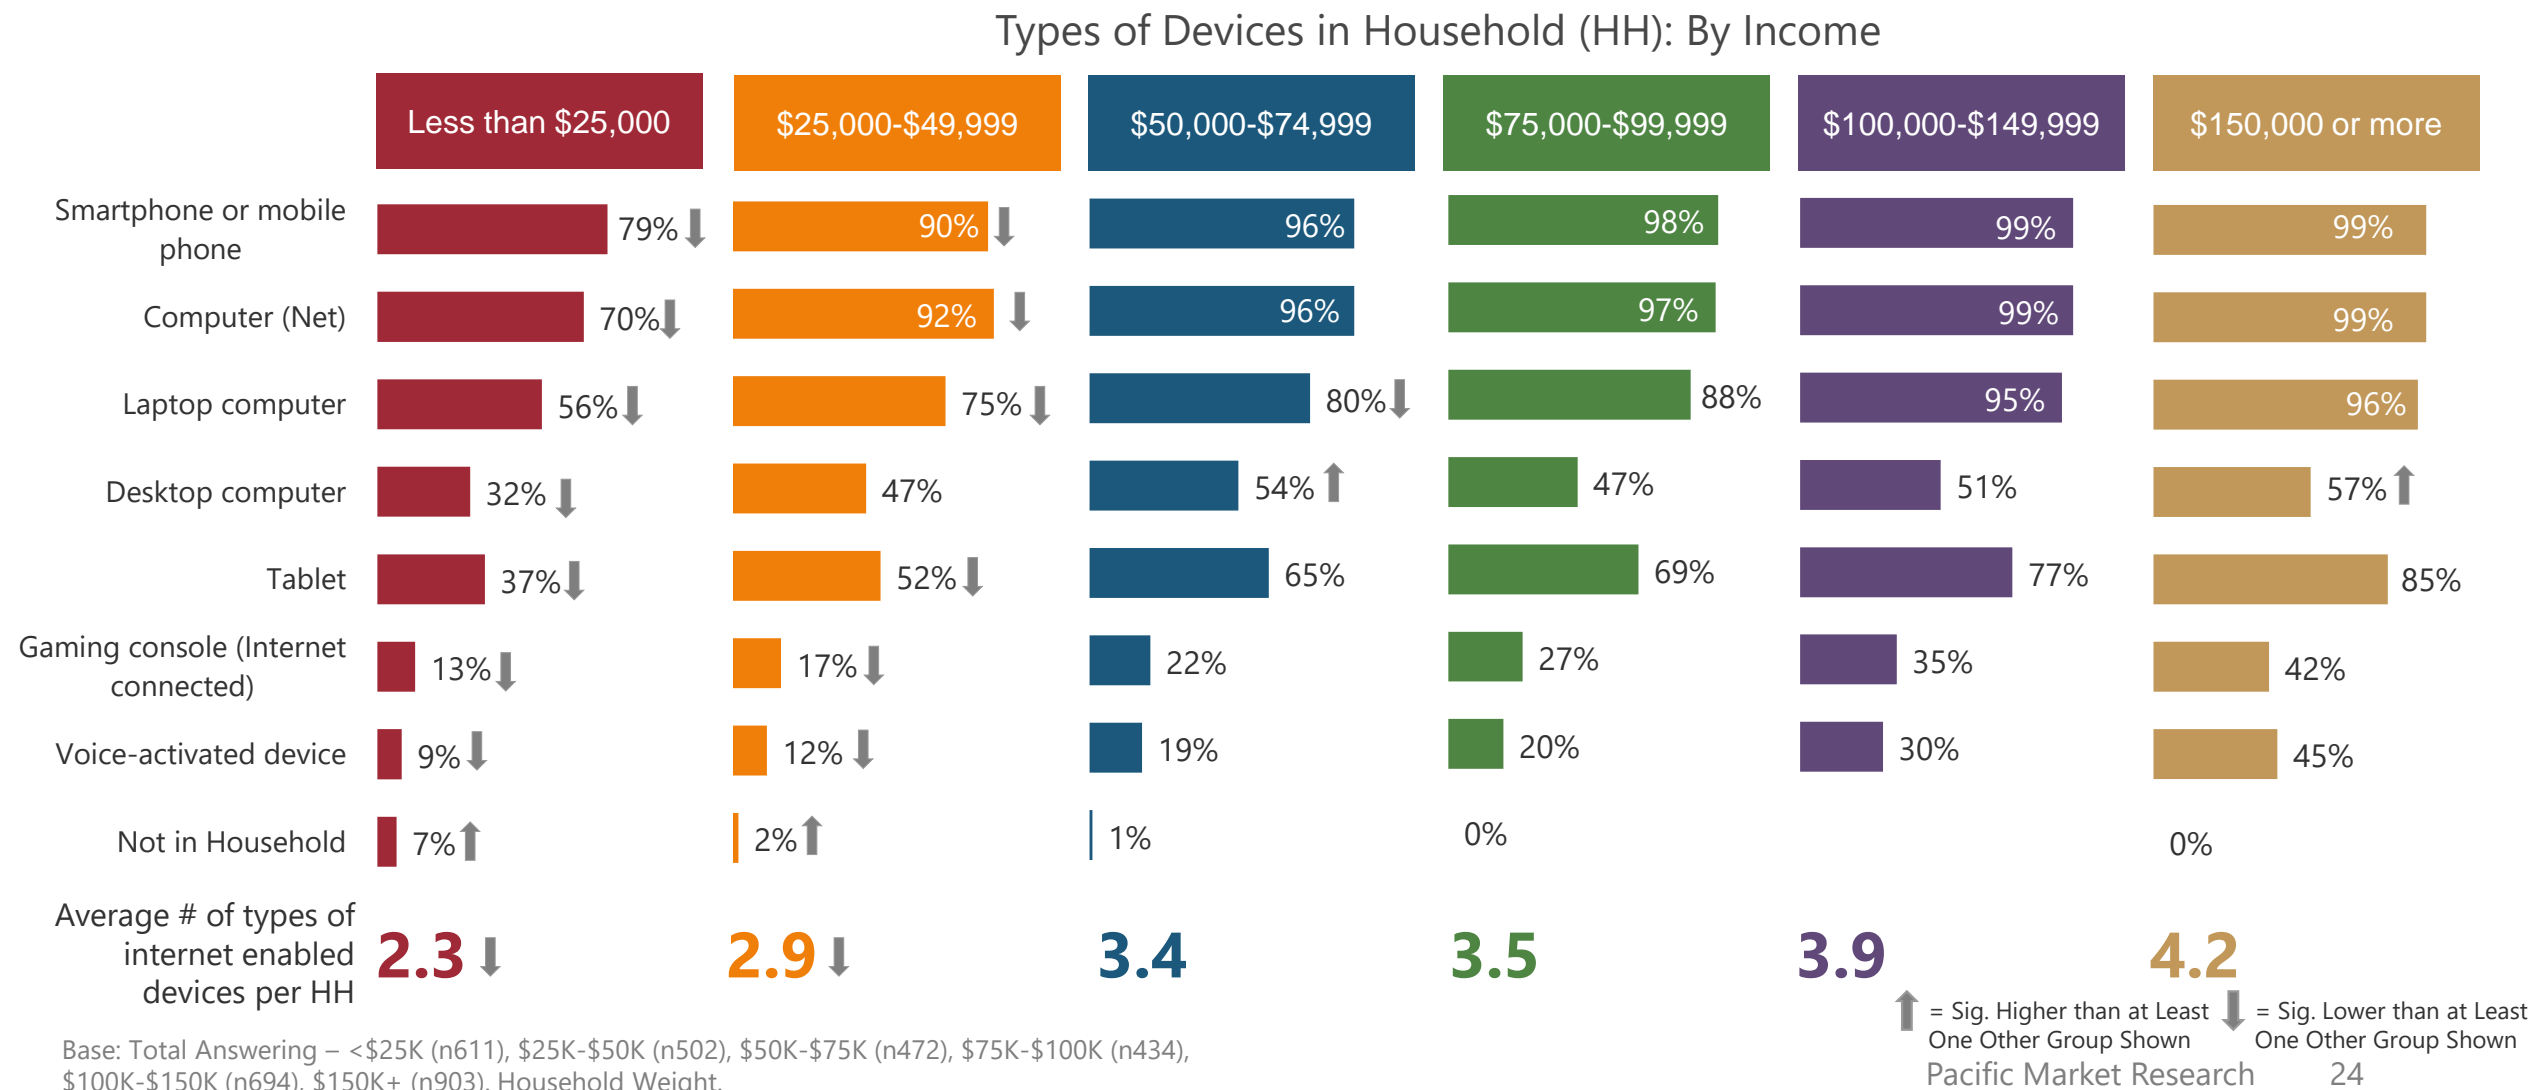

While smart/mobile phone penetration does not vary across Council Districts, ownership rates of other devices varies significantly.

South Seattle (CD 2) reports access to fewer types of devices, with lower rates of laptops, desktop computers, and tablets. Voice-activated devices are significantly more prevalent in Central/Pioneer Square to Magnolia (CD 7).

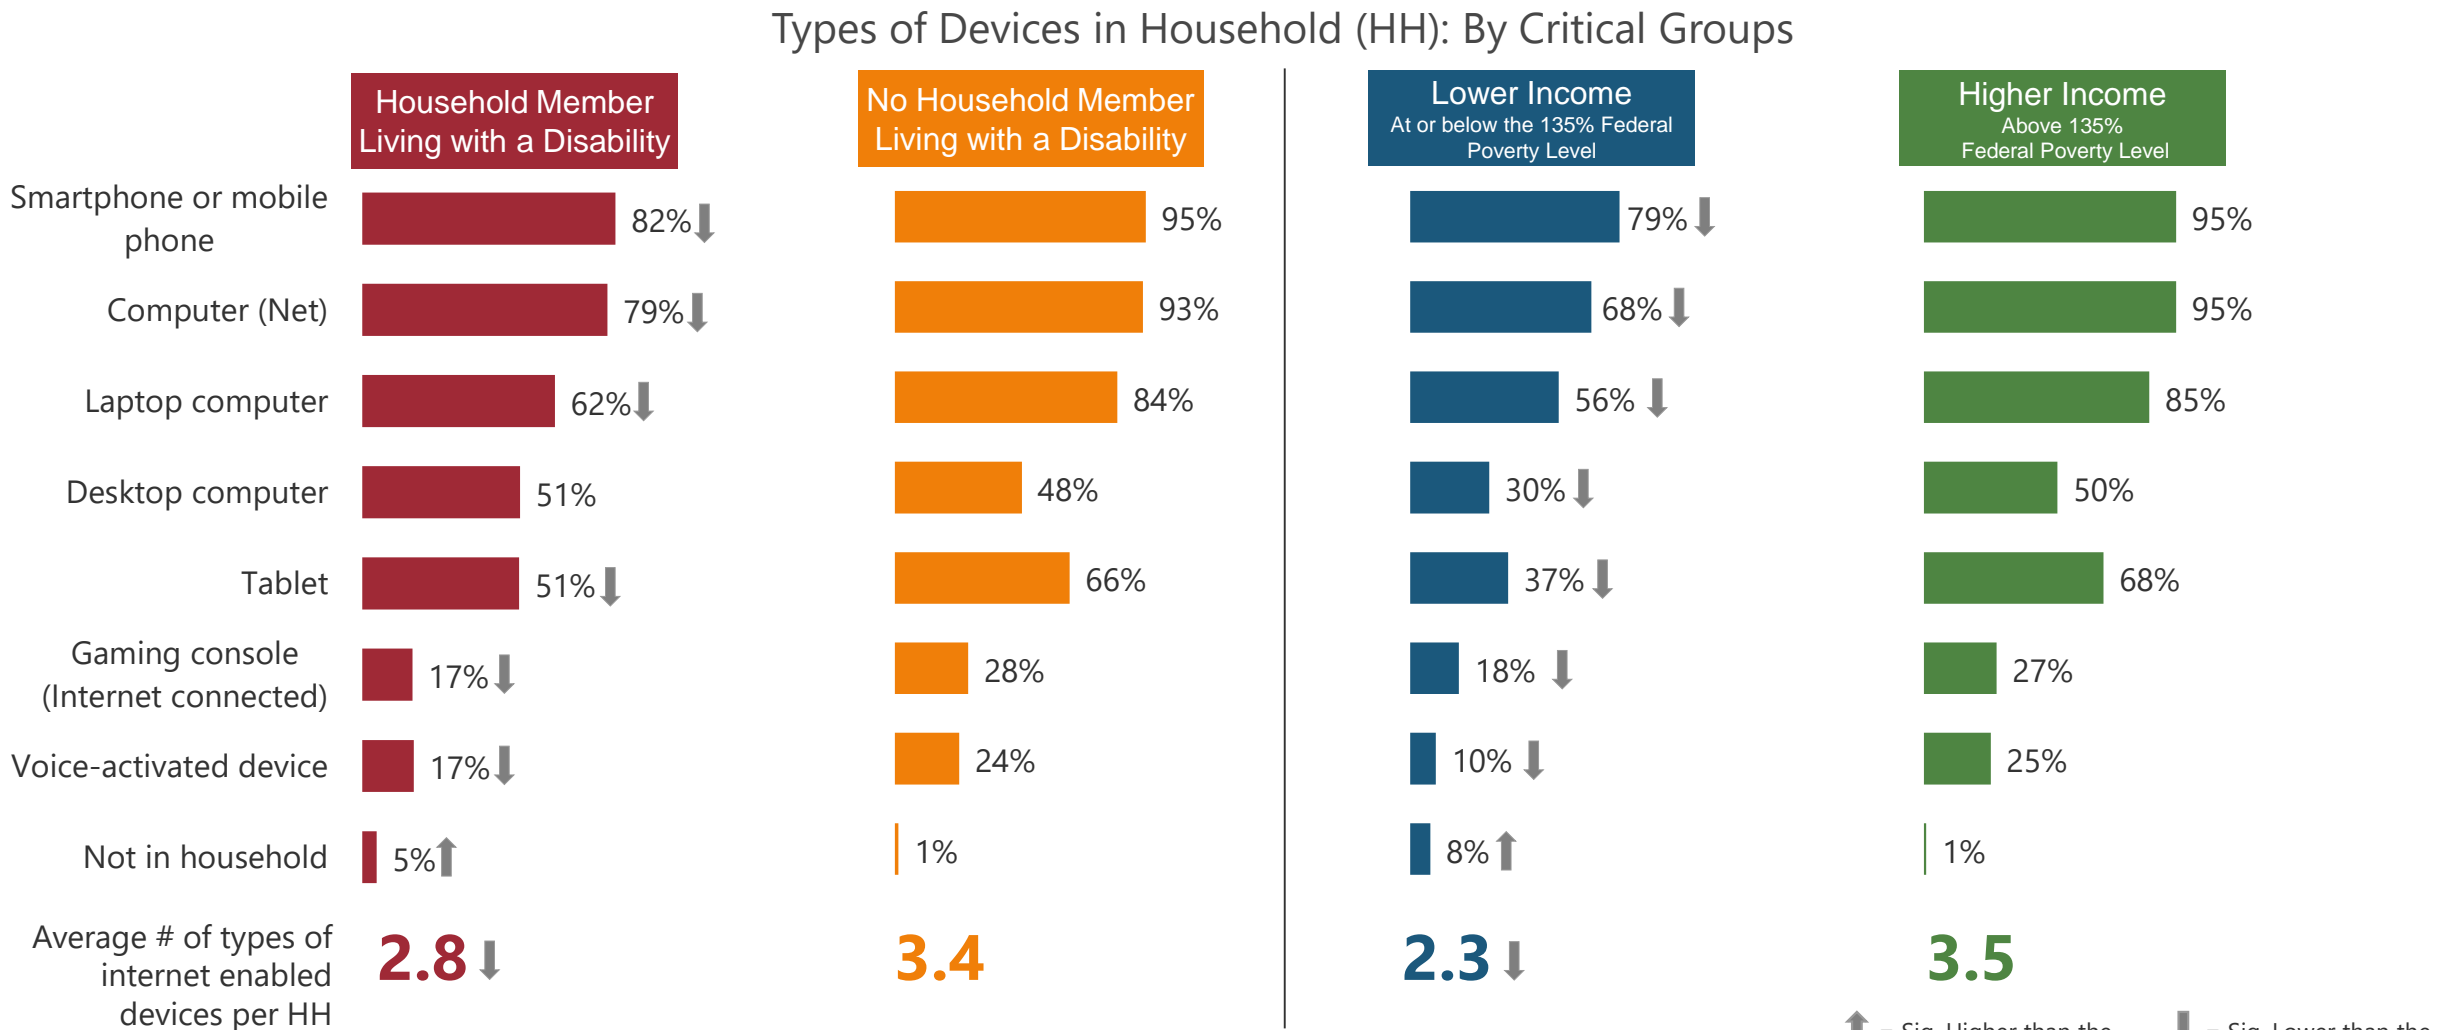

The number of types of internet enabled devices in the household increases in step with household income.

The average number of devices in the highest income households is almost double that of those living at the lowest income level.

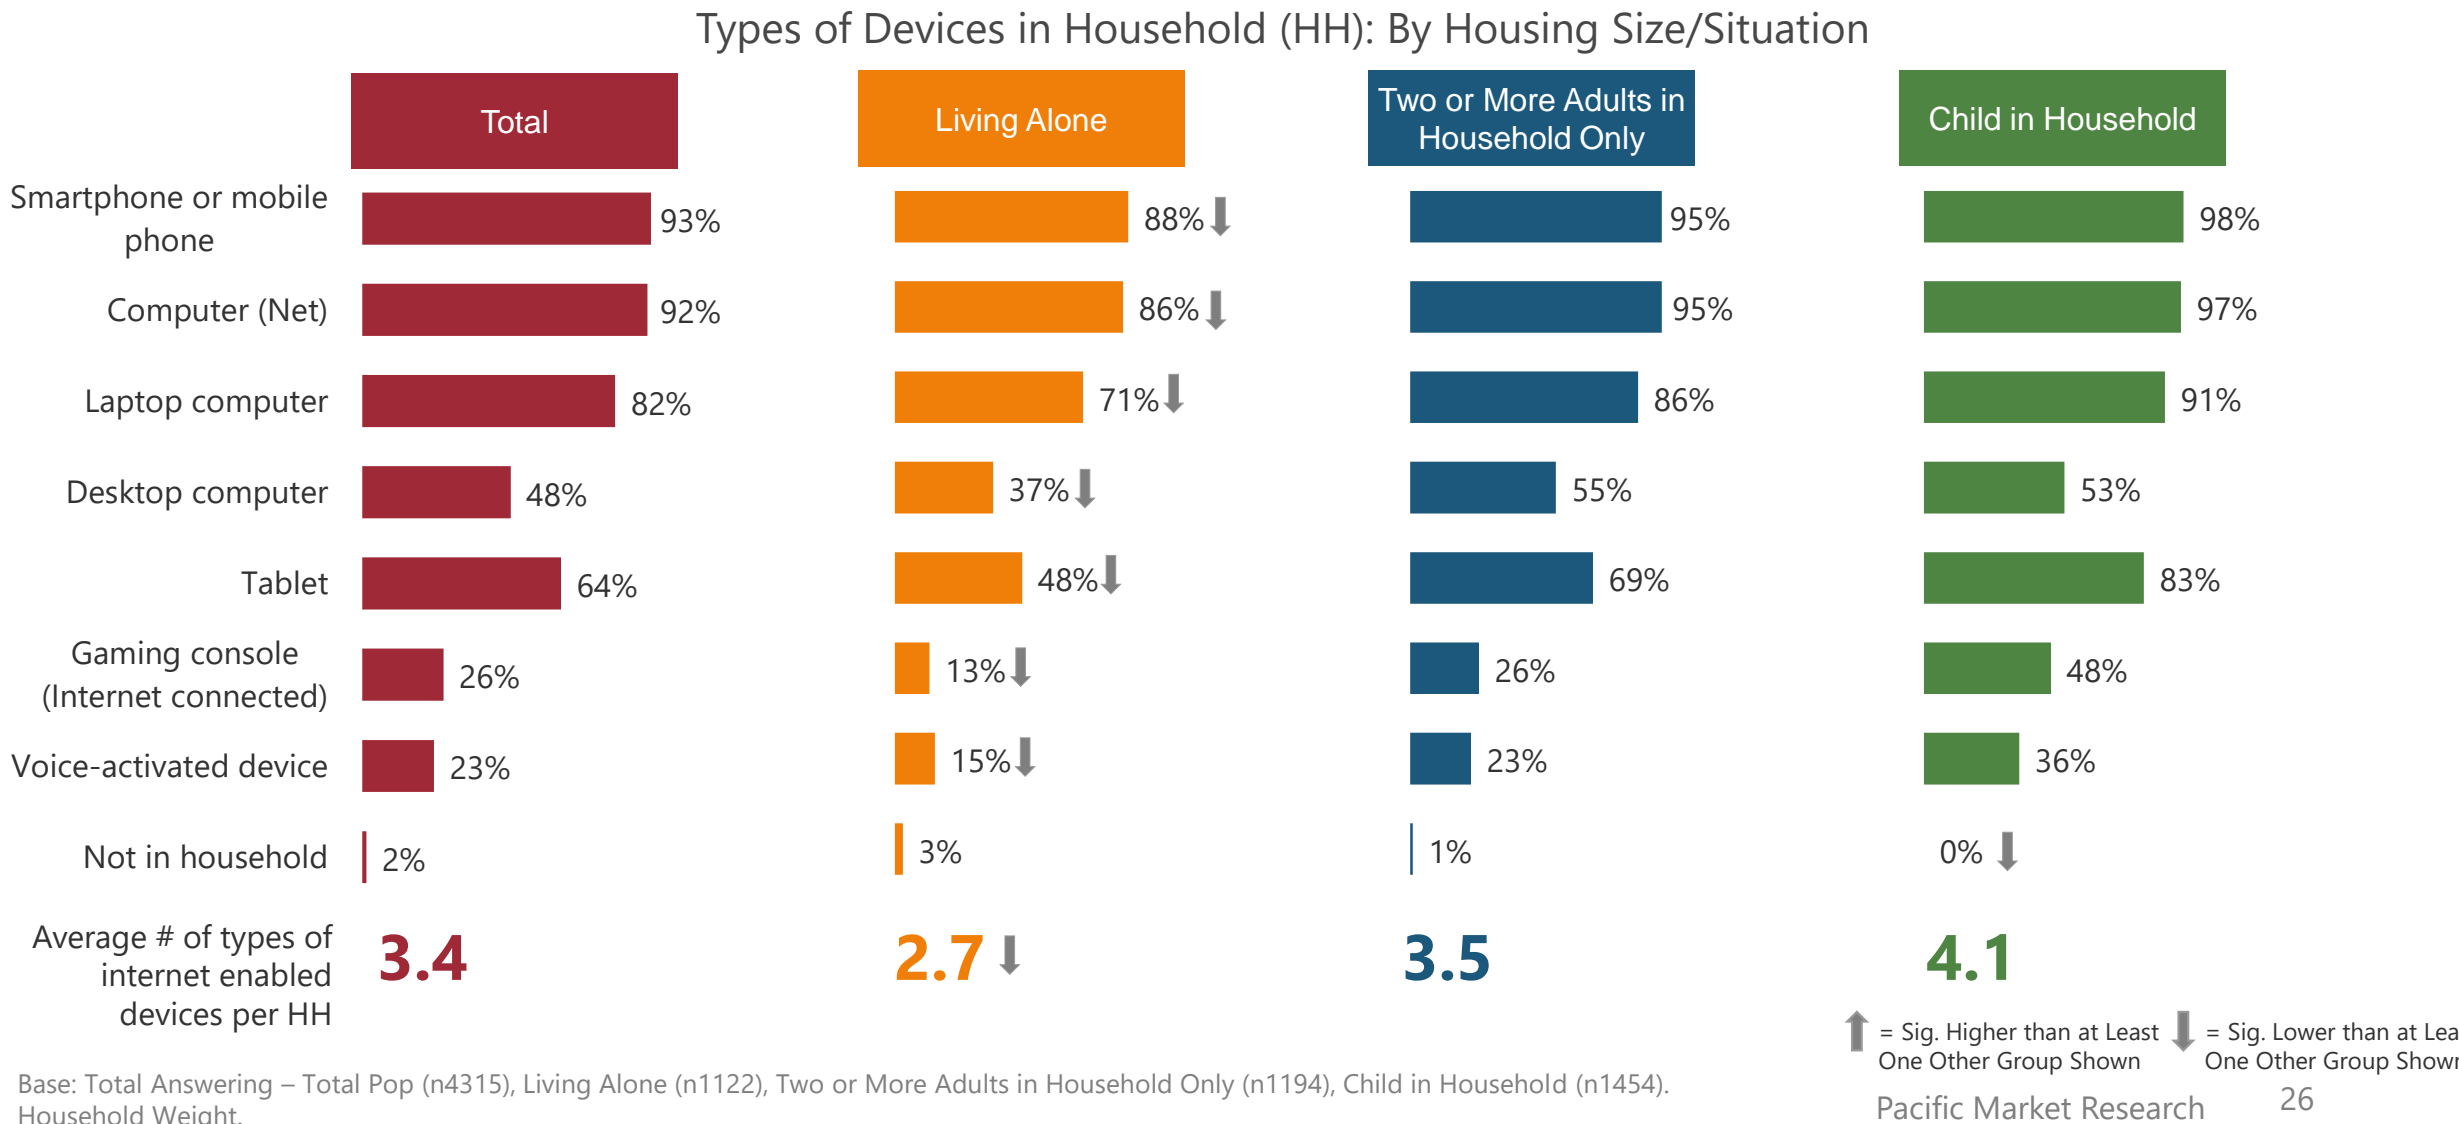

Base: Total Answering – <\$25K (n611), \$25K-\$50K (n502), \$50K-\$75K (n472), \$75K-\$100K (n434), \$100K-\$150K (n694), \$150K+ (n903). Household Weight.
Q2 - Please tell us about the technology devices you have in the place where you live...

Households with a member living with a disability and low income households (at or below 135% of the federal poverty level) are less likely to have a range of devices where they live.

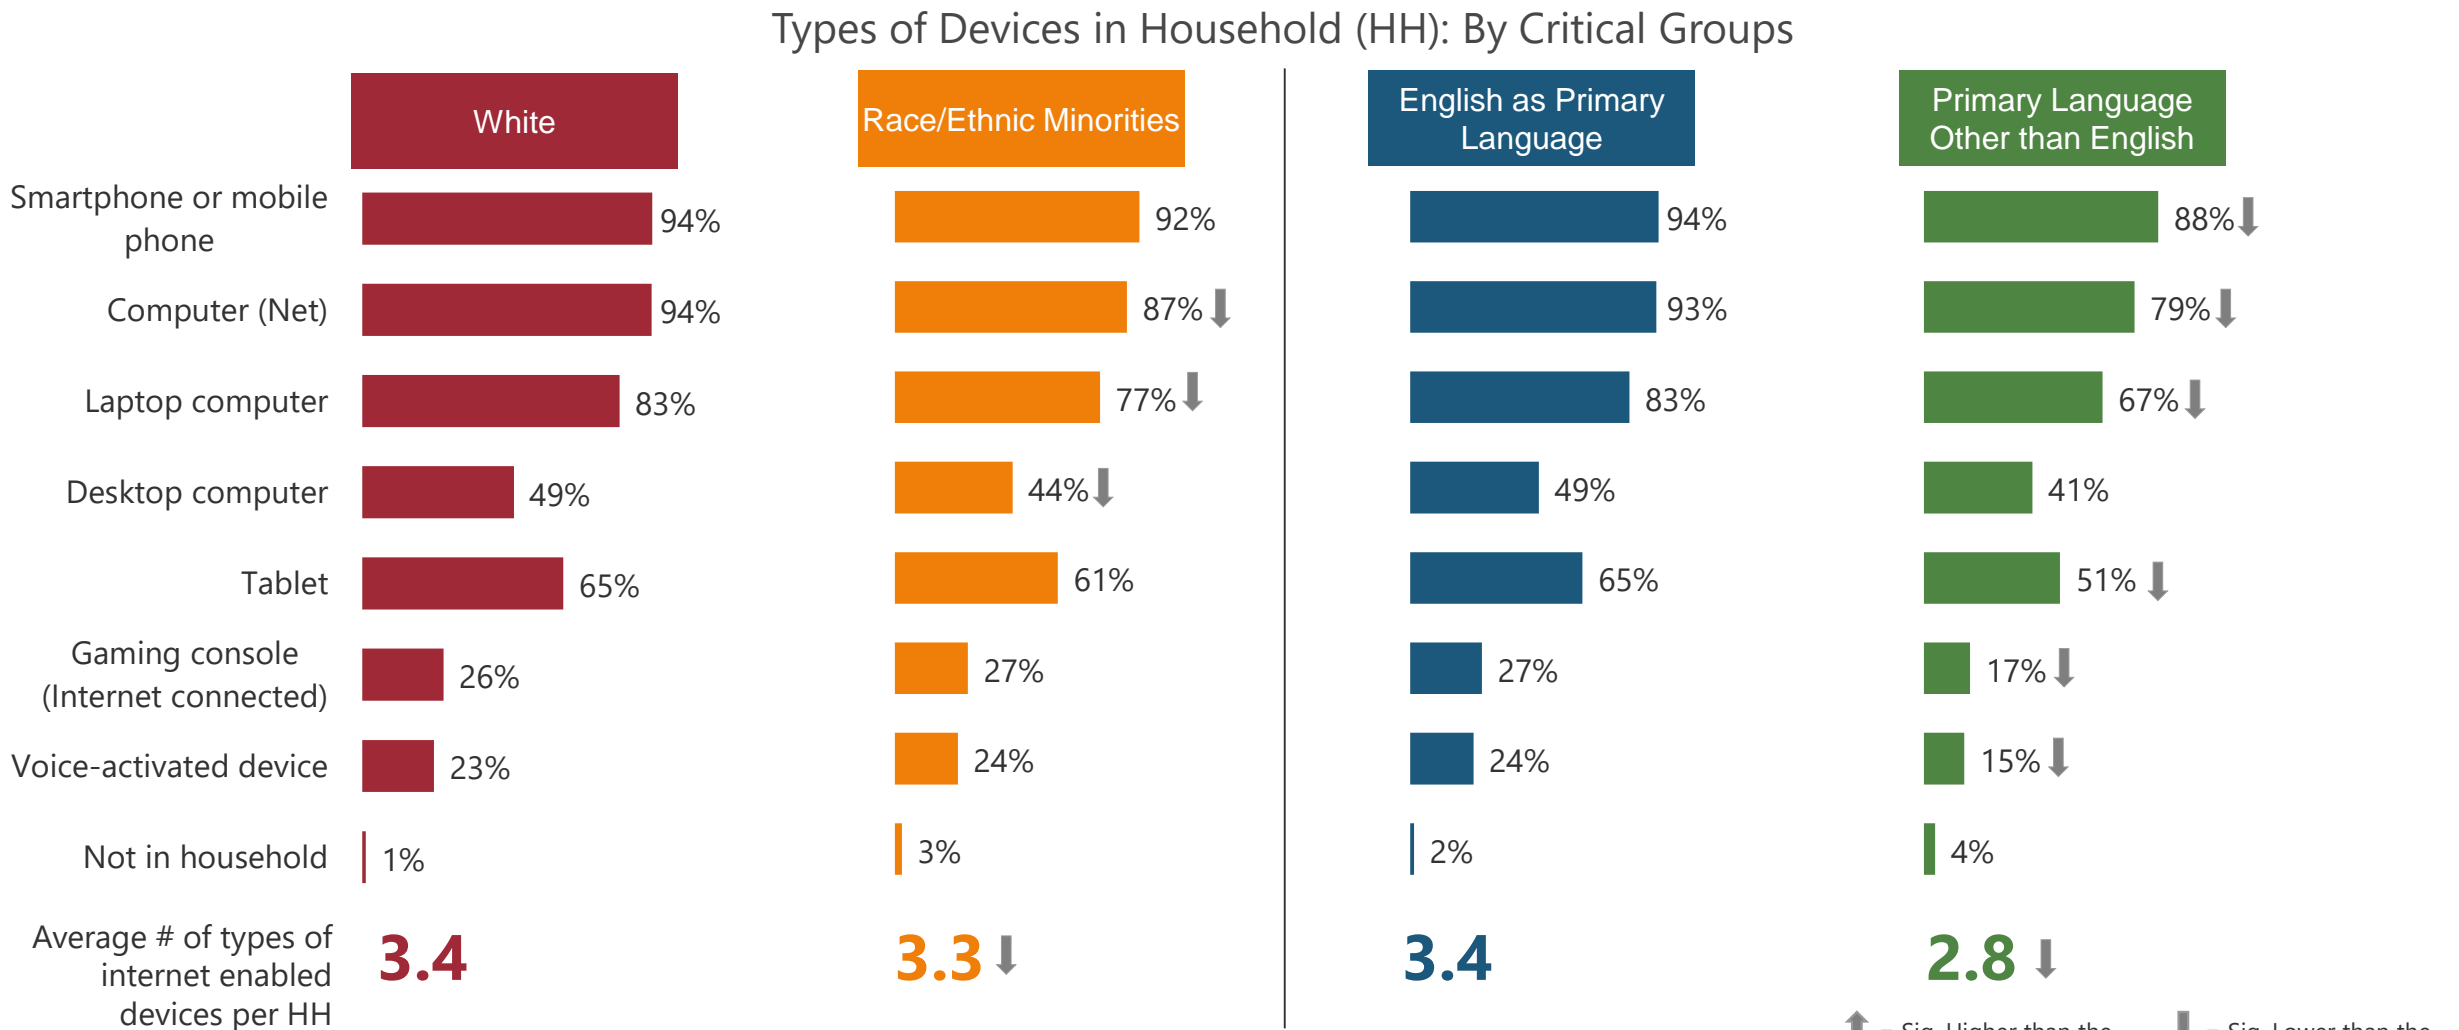

Base: Total Answering – Household Member Living with a Disability (n435), No Household Member Living with a Disability (n3861), Lower Income (n412), Higher Income (n3903). Household Weight.
Q2 - Please tell us about the technology devices you have in the place where you live...

Households with a single adult living alone are the least likely to have a number of types of internet enabled devices in the household.

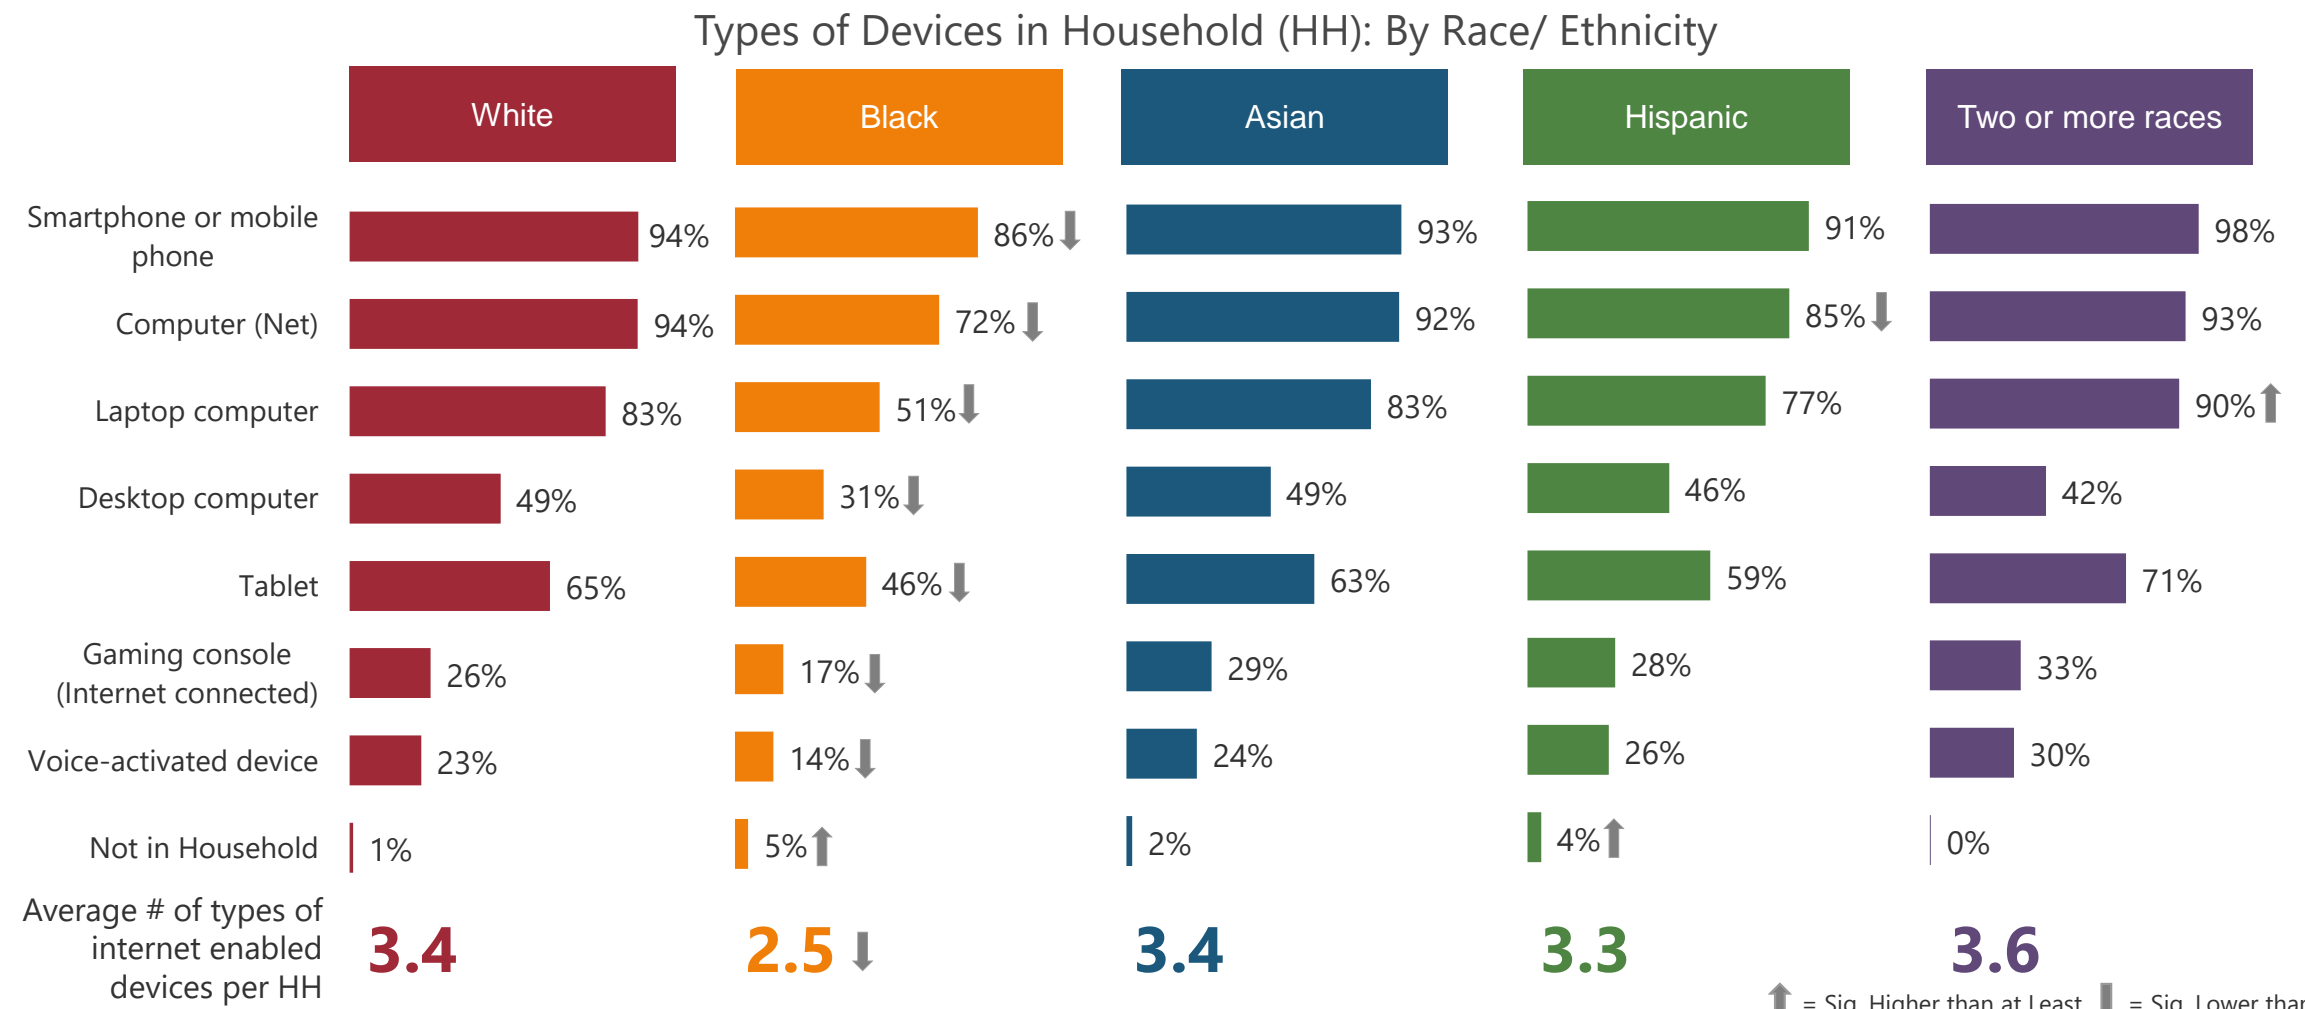

Base: Total Answering – Total Pop (n4315), Living Alone (n1122), Two or More Adults in Household Only (n1194), Child in Household (n1454). Household Weight.
Q2 - Please tell us about the technology devices you have in the place where you live...

Residents that do not primarily speak English or those that are part of a race or ethnic minority are less likely to have a range of internet enabled devices in their household – particularly computers.

Black residents are the least likely to have technology devices in their household, though a majority have a smart/mobile phone and either a desktop or laptop.

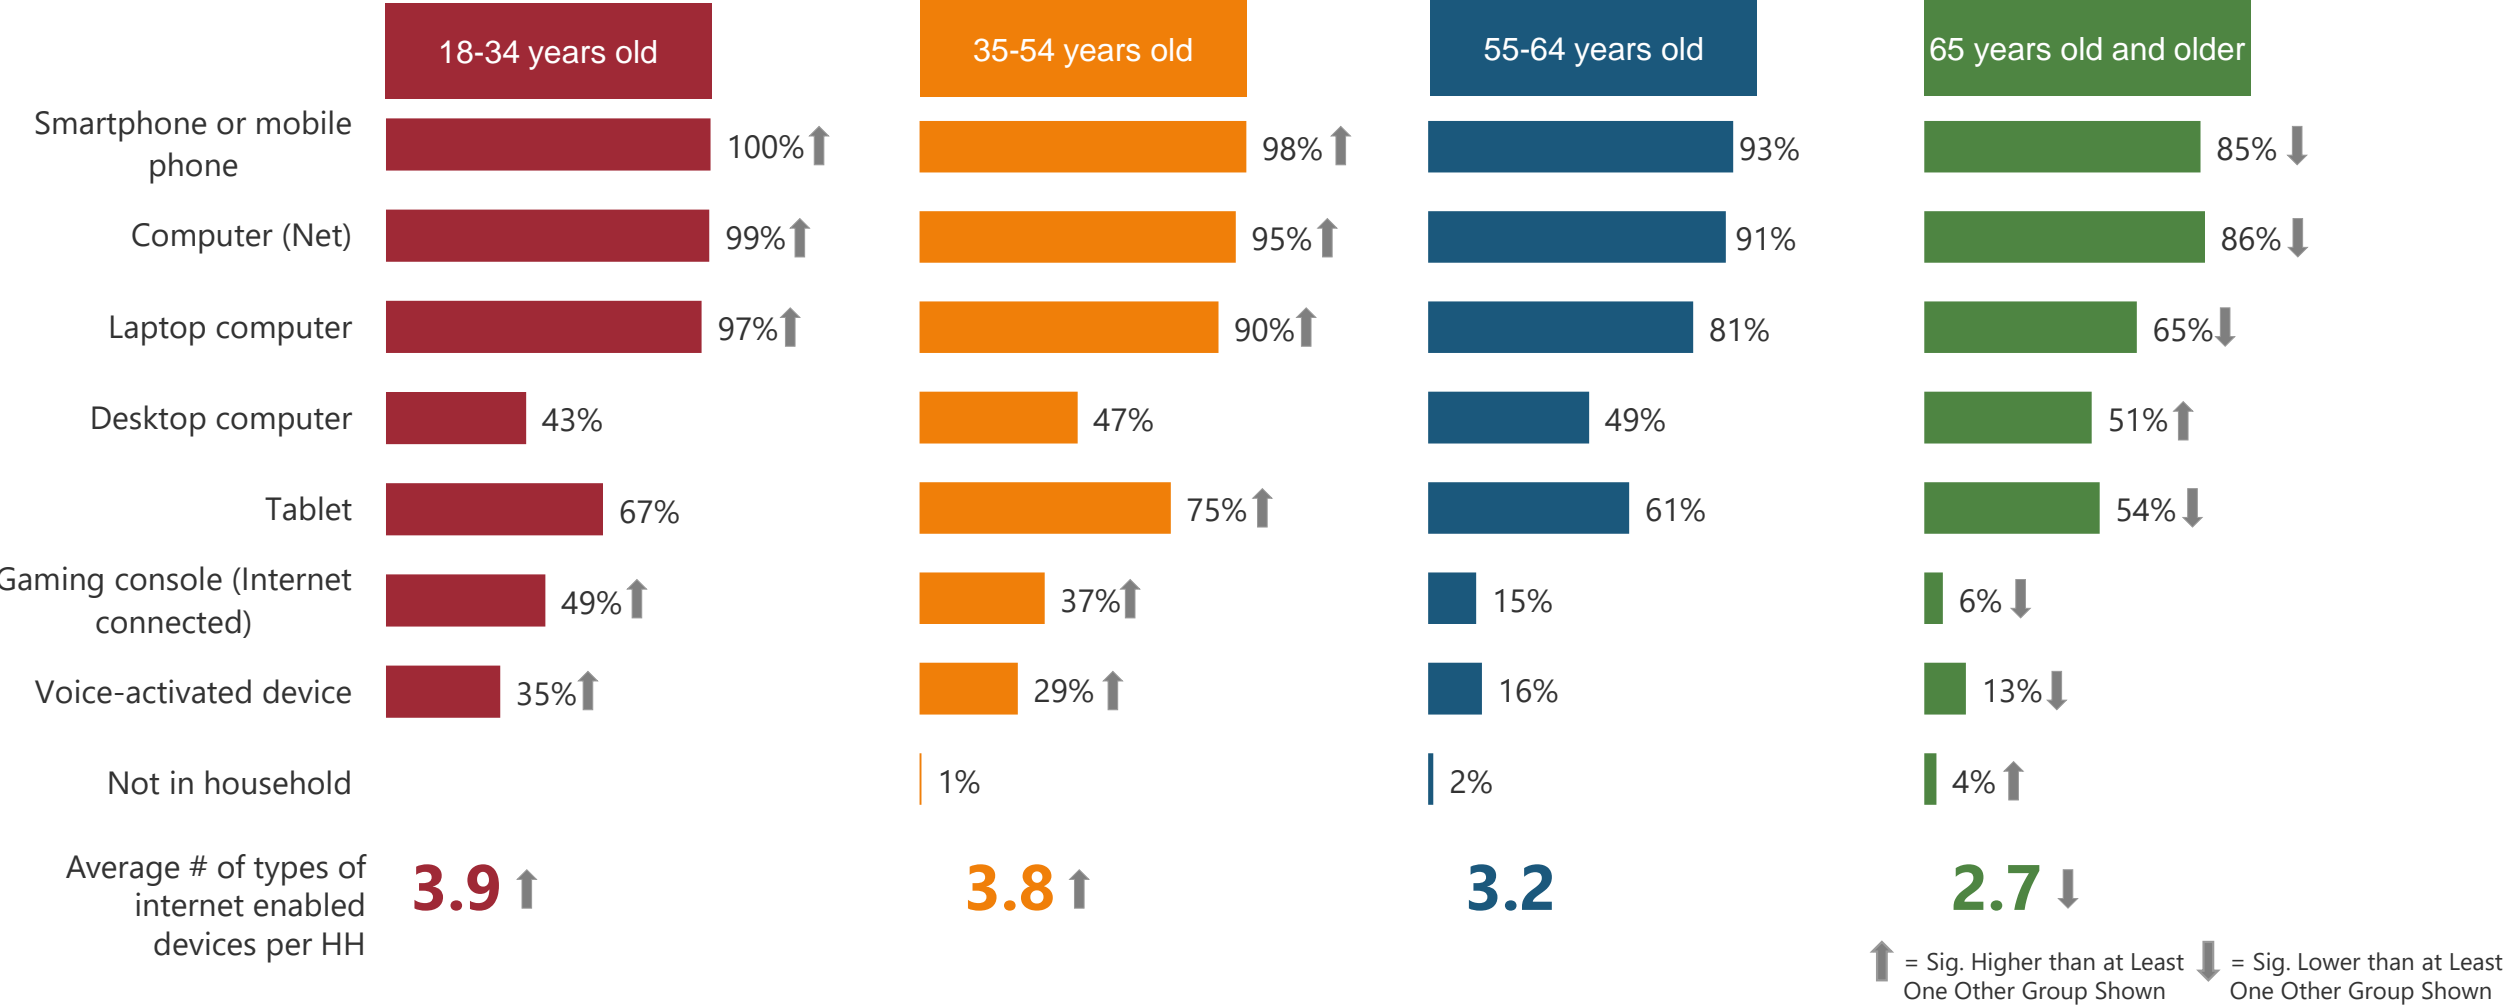

↑ = Sig. Higher than at Least One Other Group Shown ↓ = Sig. Lower than at Least One Other Group Shown

Base: Total Answering – White (n3077), Black (n165), Asian (n416), Hispanic (n169), Two or more races (n148).
Note: Native Hawaiian/ Pacific Islander, American India/Alaska Native, Other Races are not shown due to small base sizes. Household Weight.
Q2 - Please tell us about the technology devices you have in the place where you live...

The number of types of internet enabled devices in the household decreases among older residents.

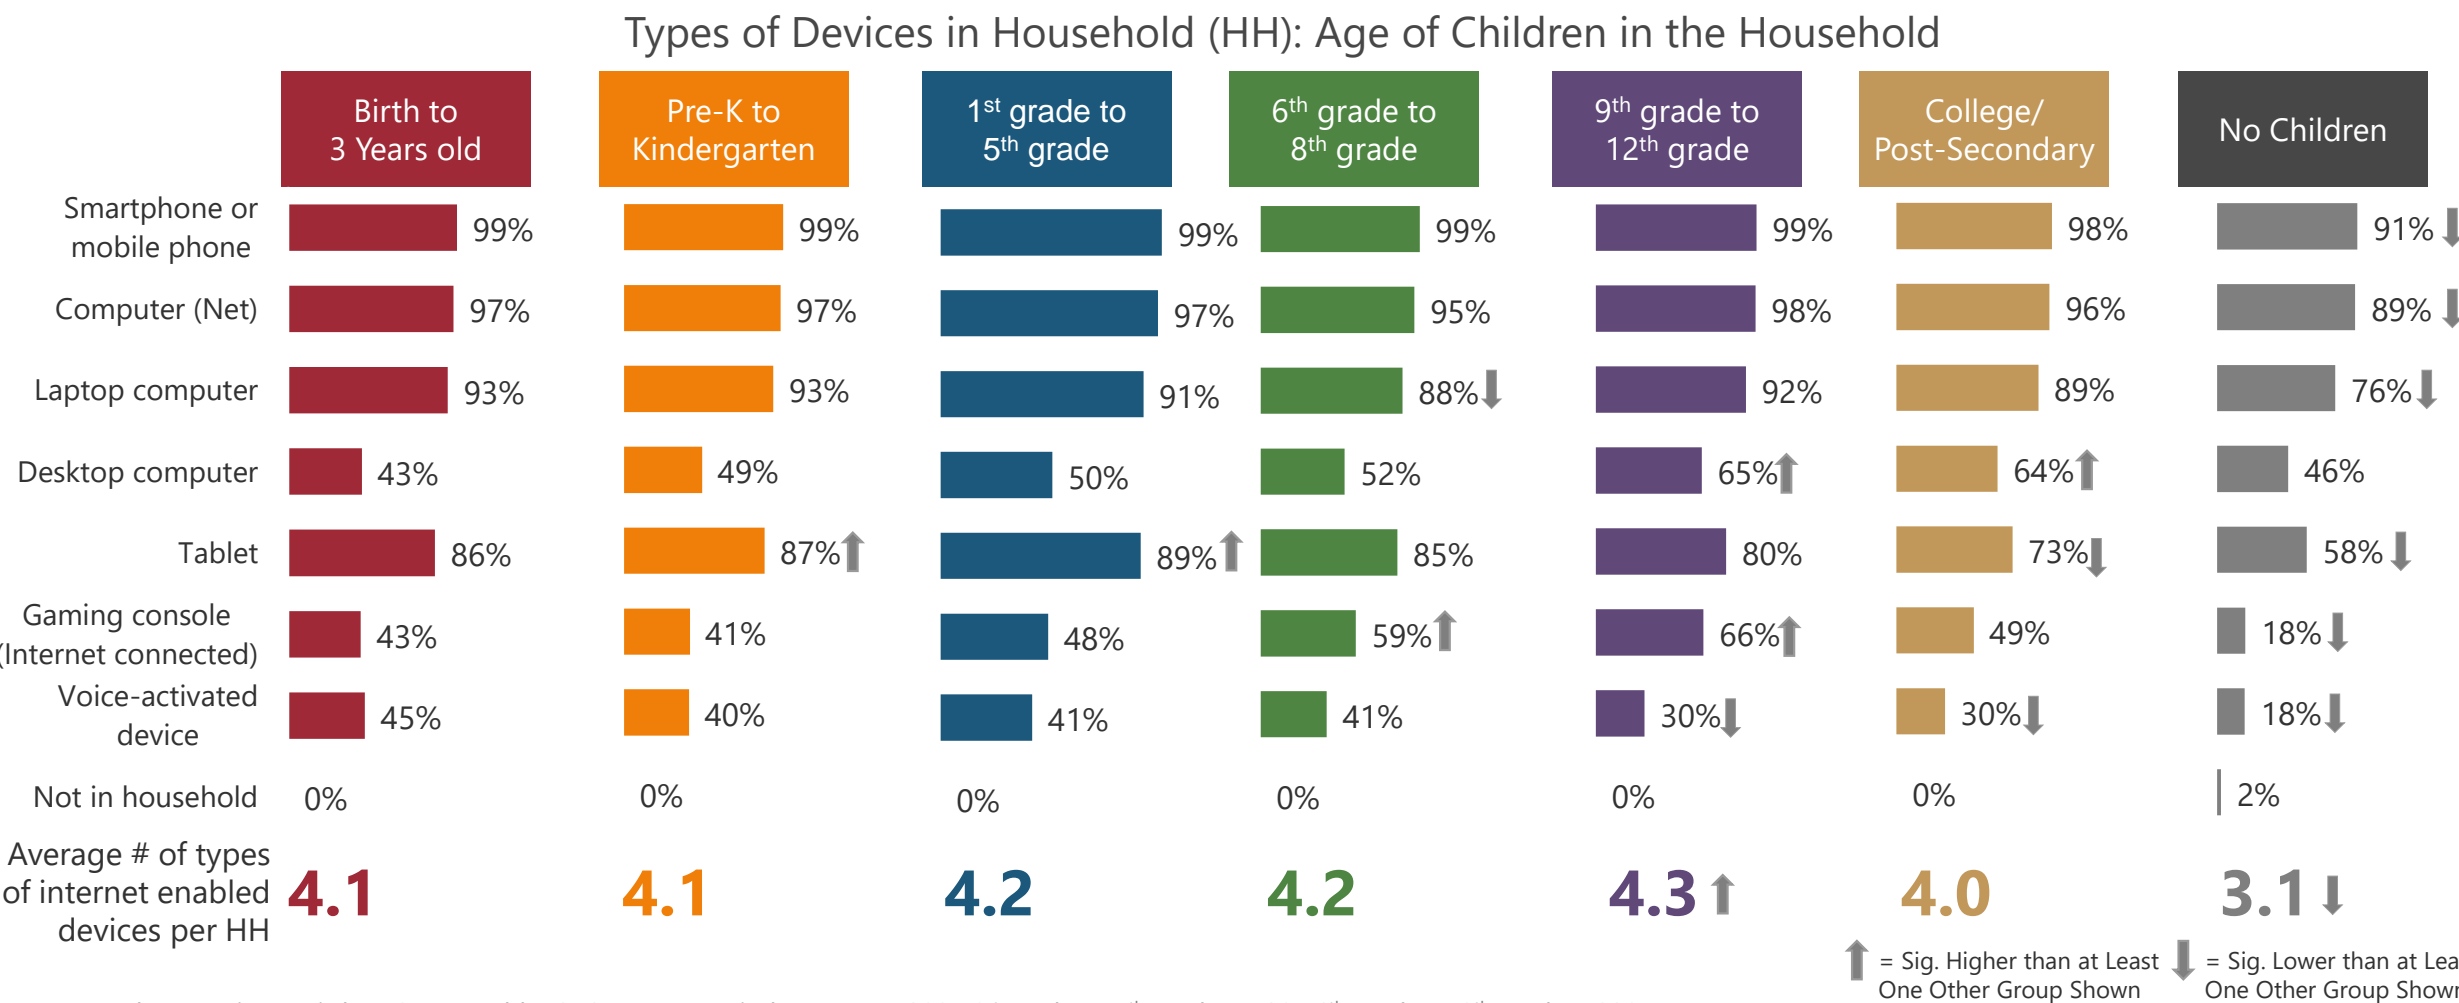

Residents under 55 years old are the most likely to have a wide variety of devices, with nearly all having a smart/mobile phone and a laptop or desktop computer.

Types of Devices in Household (HH): By Age

Households with children are more likely to have a variety of devices, especially smart/mobile phones and laptop computers.

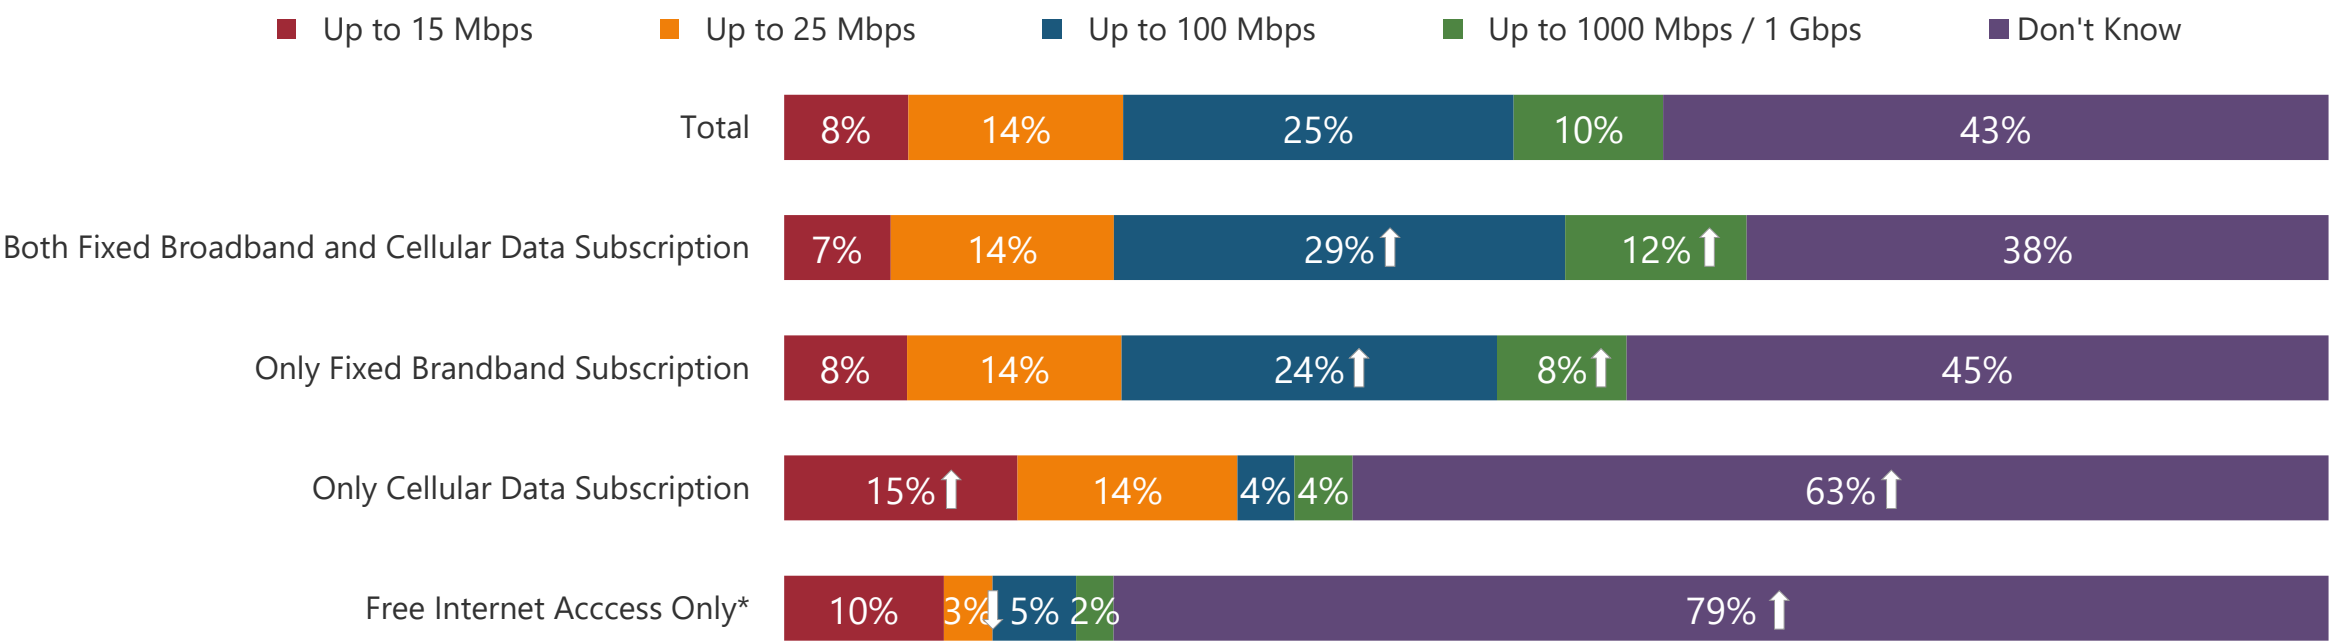

Households with younger children are more likely to have tablets, while those with older children are most likely to have desktop computers and gaming consoles.

Although two out of five residents do not know their household internet speed, most of those who do know believe their speed to be at least up to 100 Mbps.

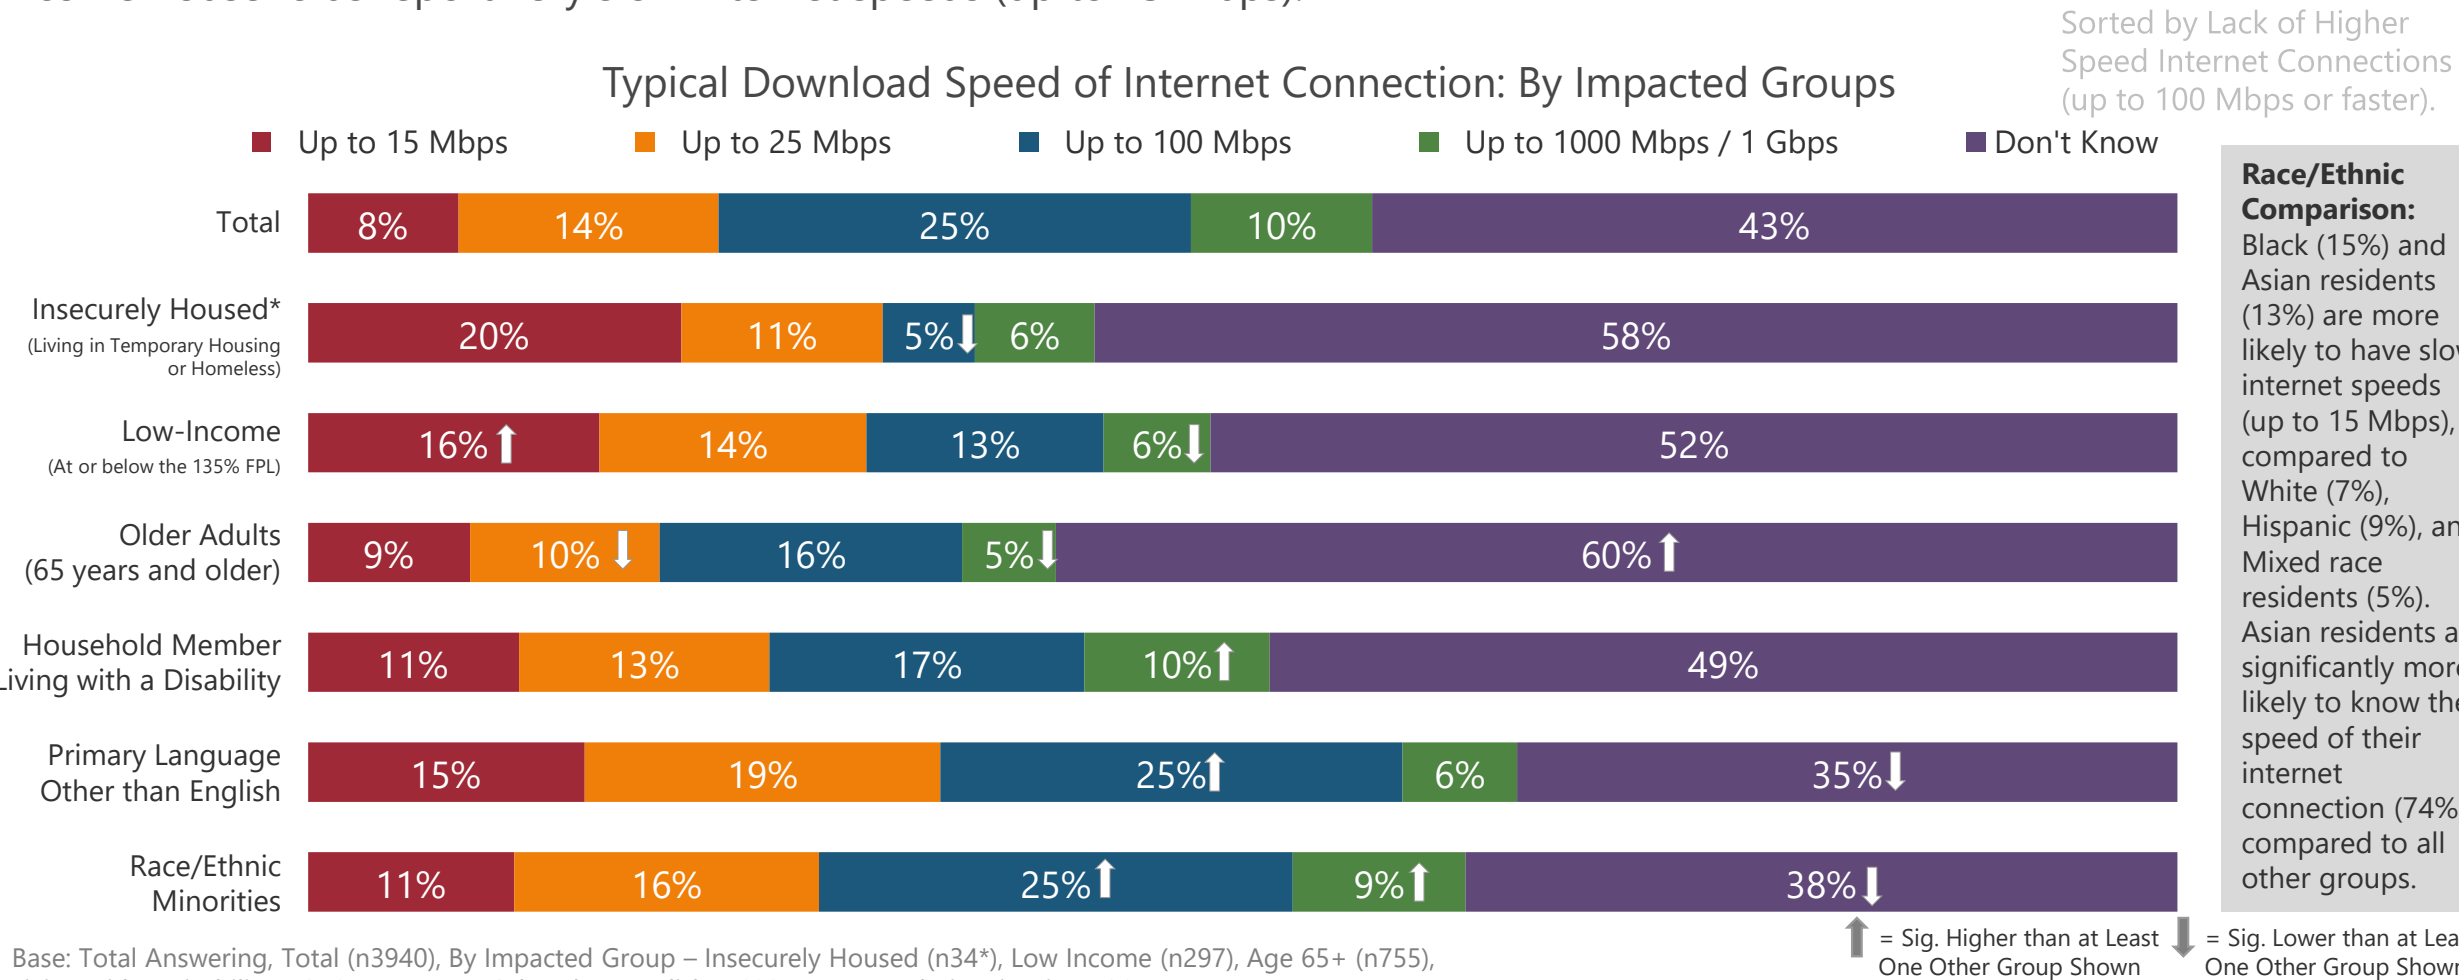

Households with a fixed broadband internet subscription are significantly more likely to have faster download speed. On the other hand, most of those who rely on cellular data or free/public access do not know their speed or believe it to be slower than up to 15 Mbps.

Typical Download Speed of Internet Connection: By Internet Subscription Type

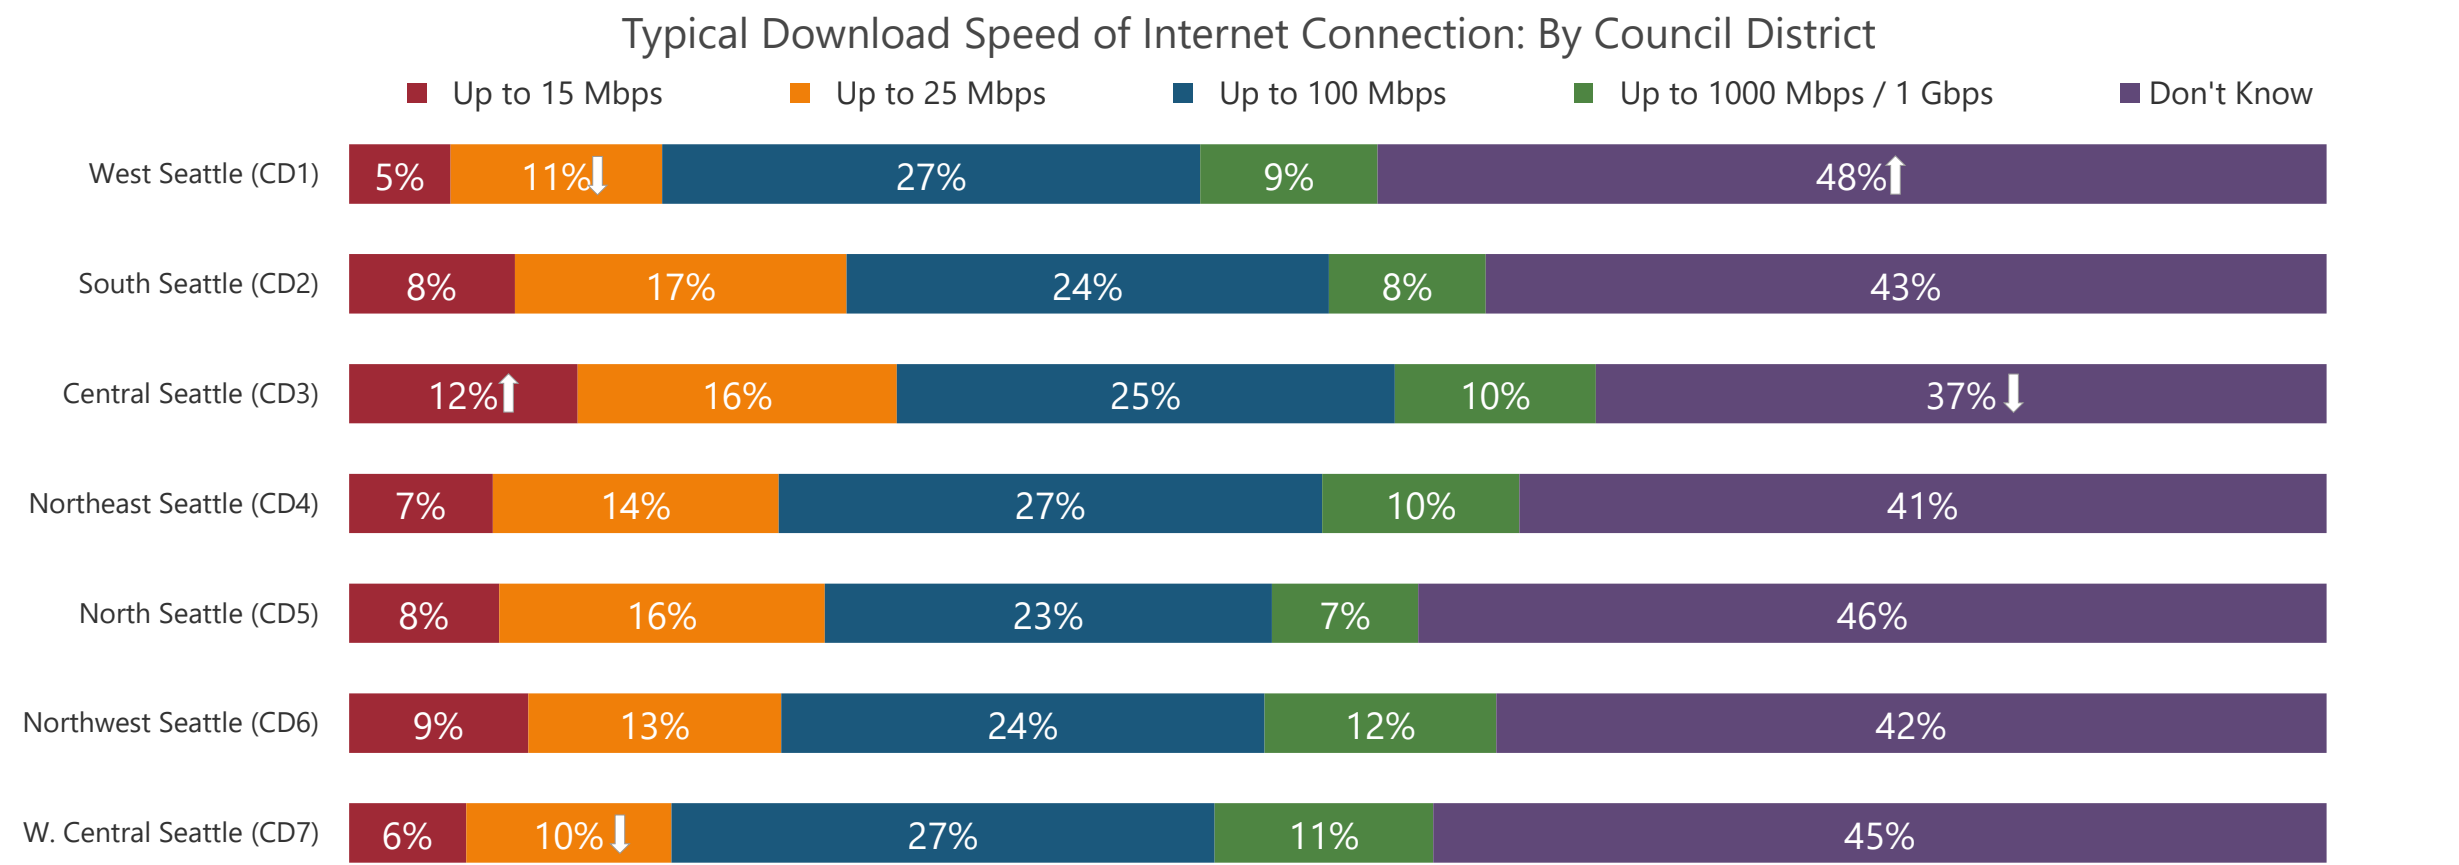

Over half of residents in the most digitally impacted groups (older adults, insecurely housed, low income, and those with a household member living with a disability) do not know the speed of their internet connection.

One out of three (35%) of those in households where English is not the primary language and three out of ten (30%) of low income households report very slow internet speeds (up to 25 Mbps).

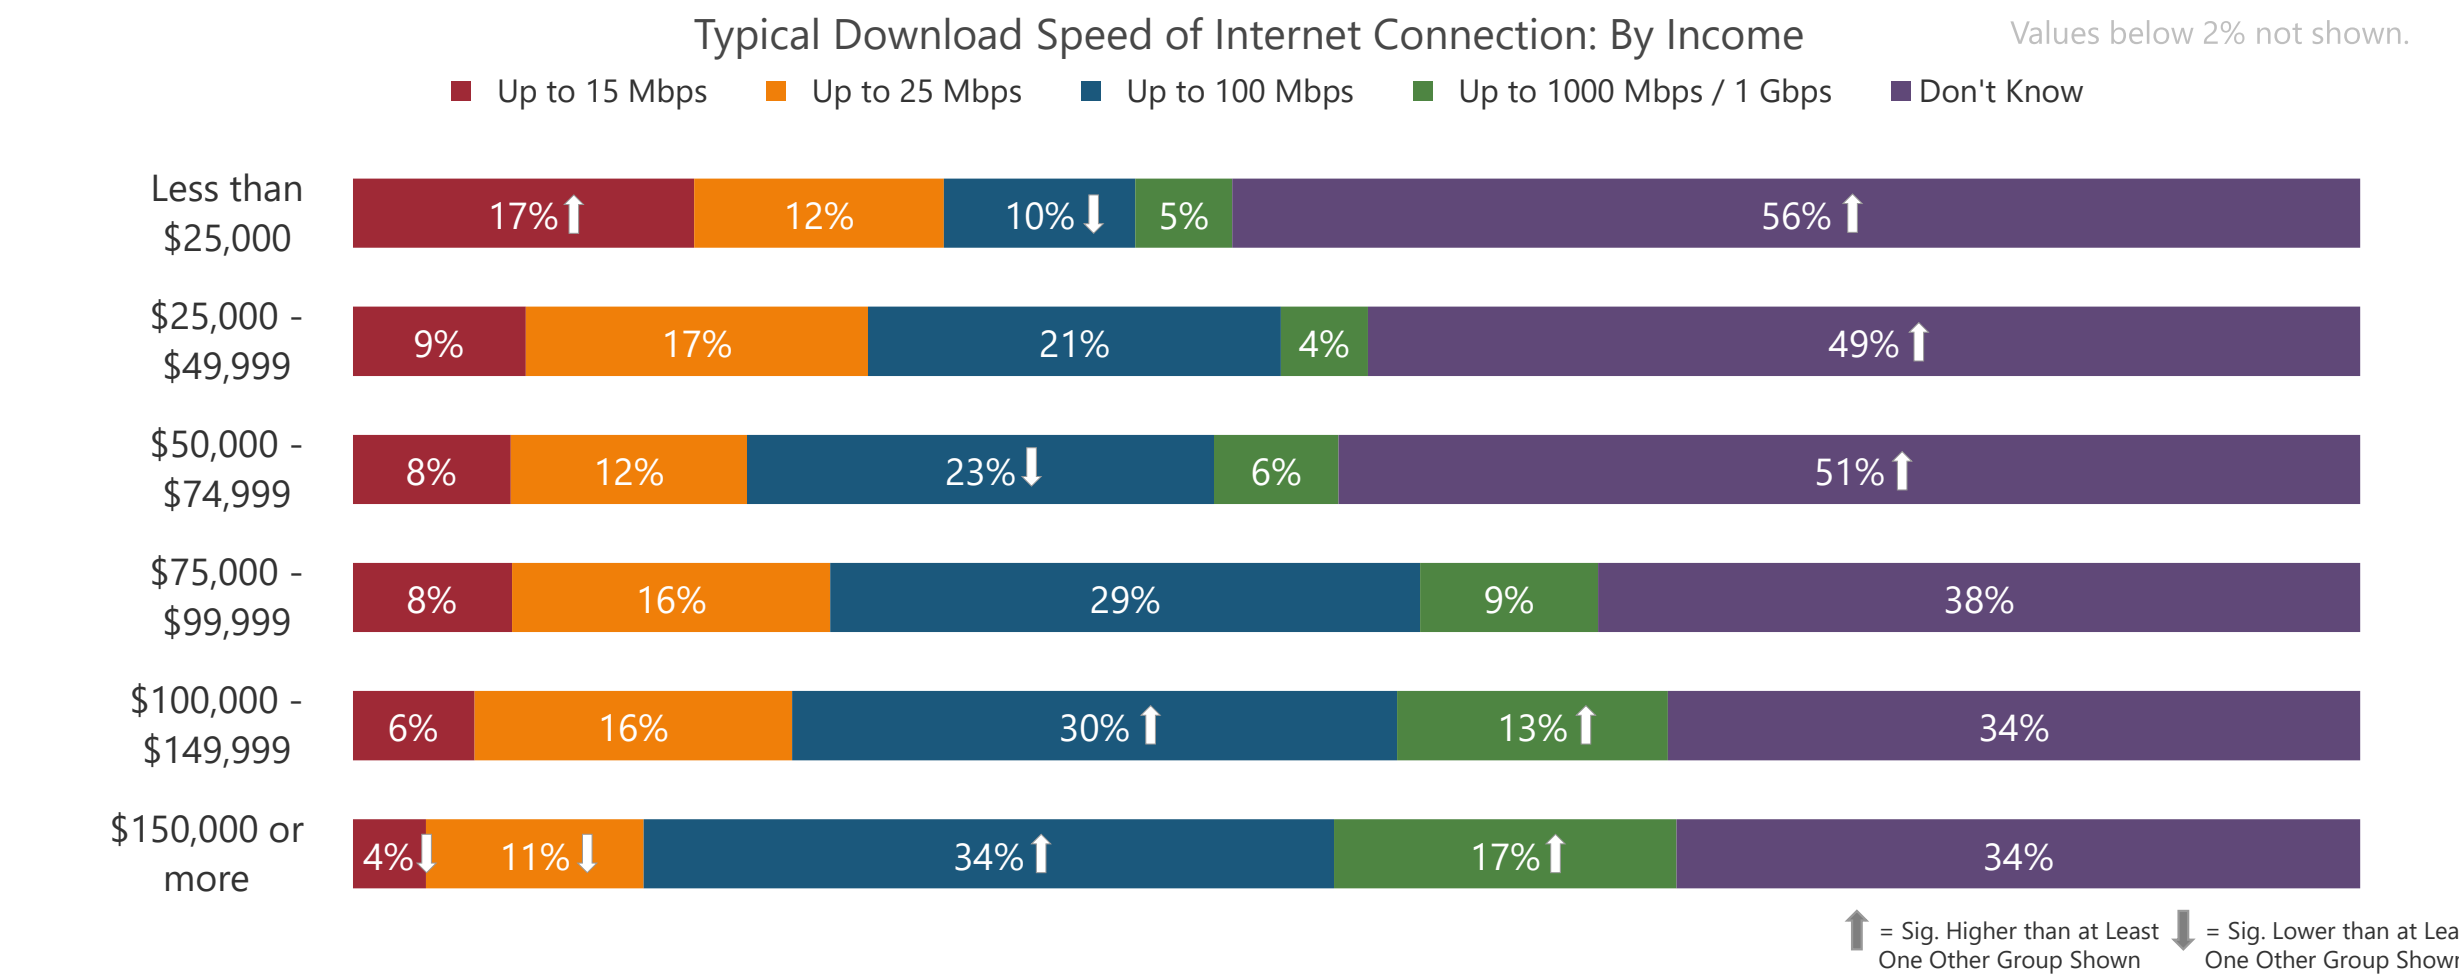

Internet connection speed varies throughout the city, though at least half of the households in each Council District report speeds over 25 Mbps (among those aware of their download speed).

Those in Central Seattle (Council District 3) are the most likely to report having the slowest broadband speeds (up to 25 Mbps).

Internet download speed correlates with household income.

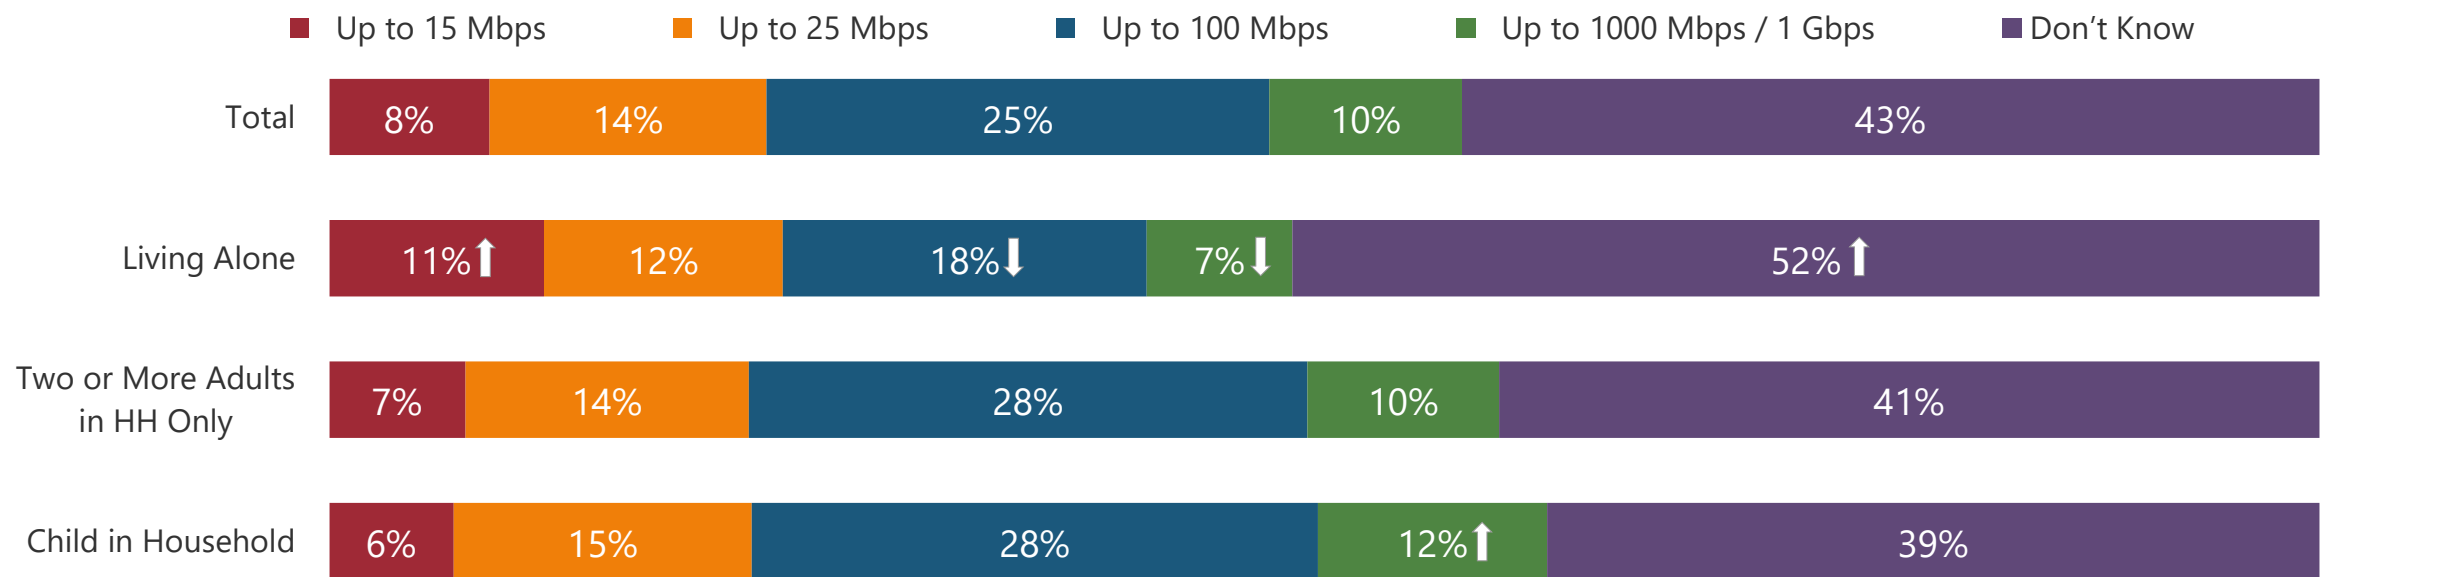

Households with lower incomes are more likely to not know their internet speed. Among those that know the speed of their connection, those with household income below \$25,000 are most likely to state they have slow speeds.

Households with multiple adults or households with children are more likely to have faster internet connections than single occupant households.

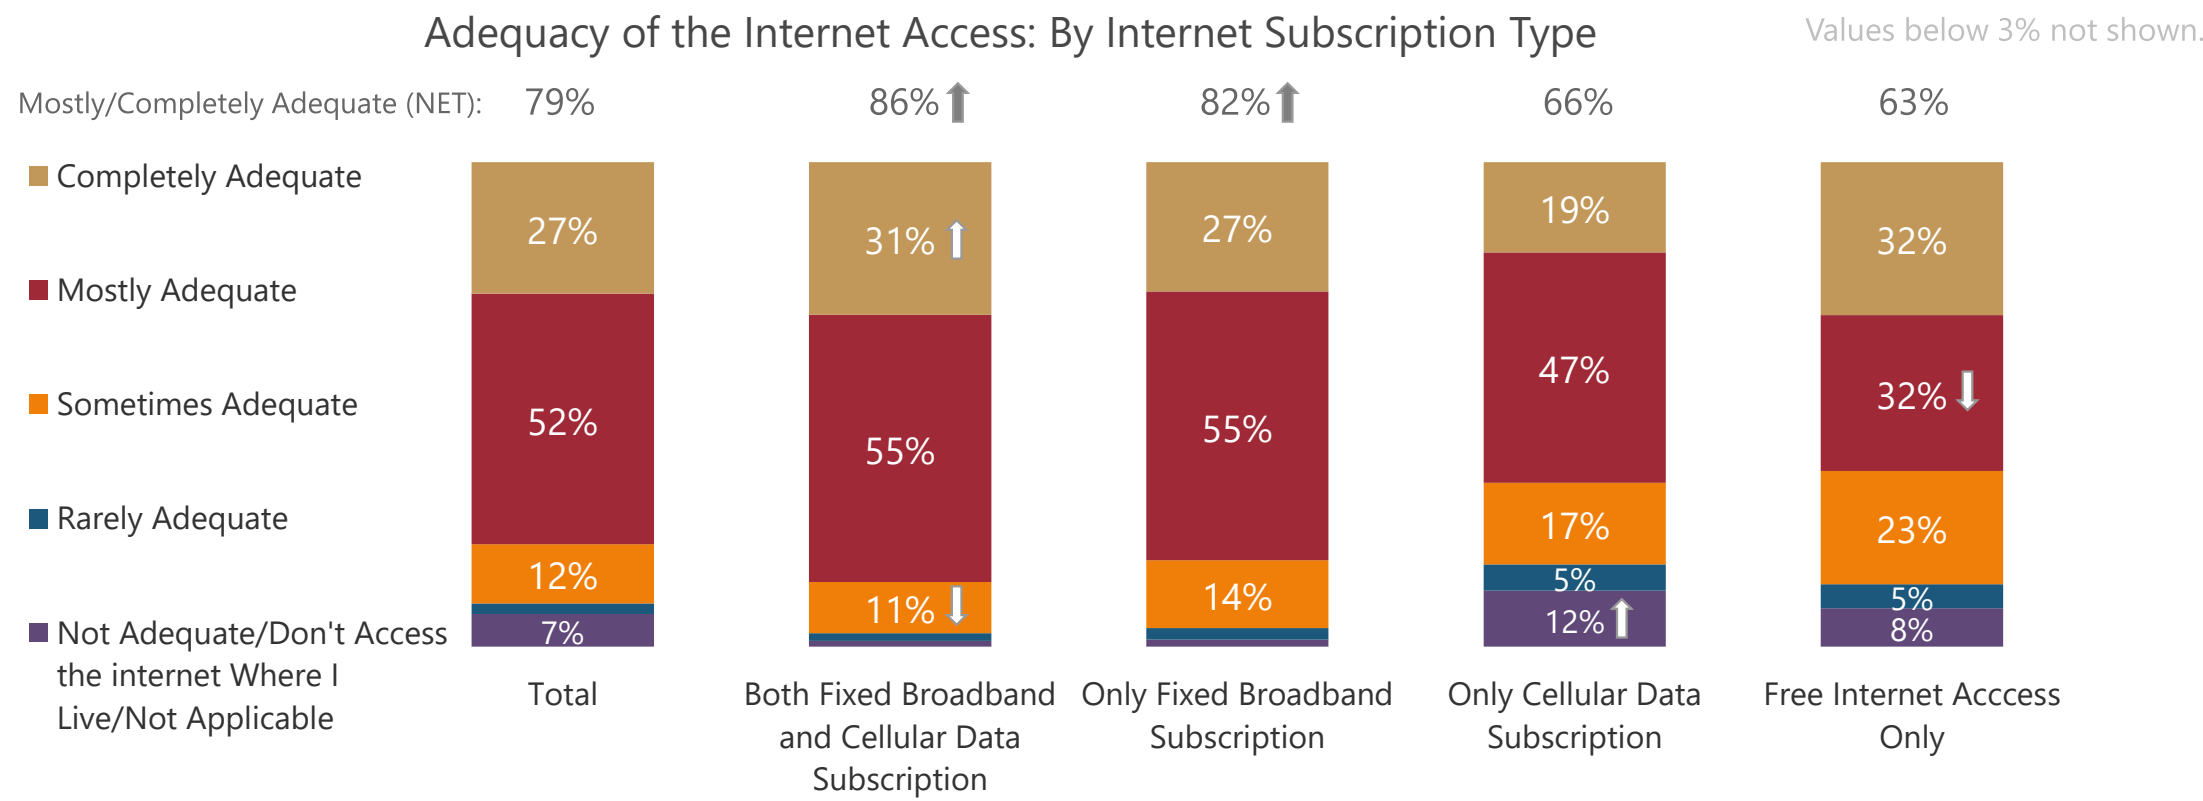

Single occupant households are more likely than their counterparts to have speeds up to 15 Mbps and to not know the download speed of their connection.

Typical Download Speed of Internet Connection: By Housing Size/Situation

↑ = Sig. Higher than at Least One Other Group Shown ↓ = Sig. Lower than at Least One Other Group Shown

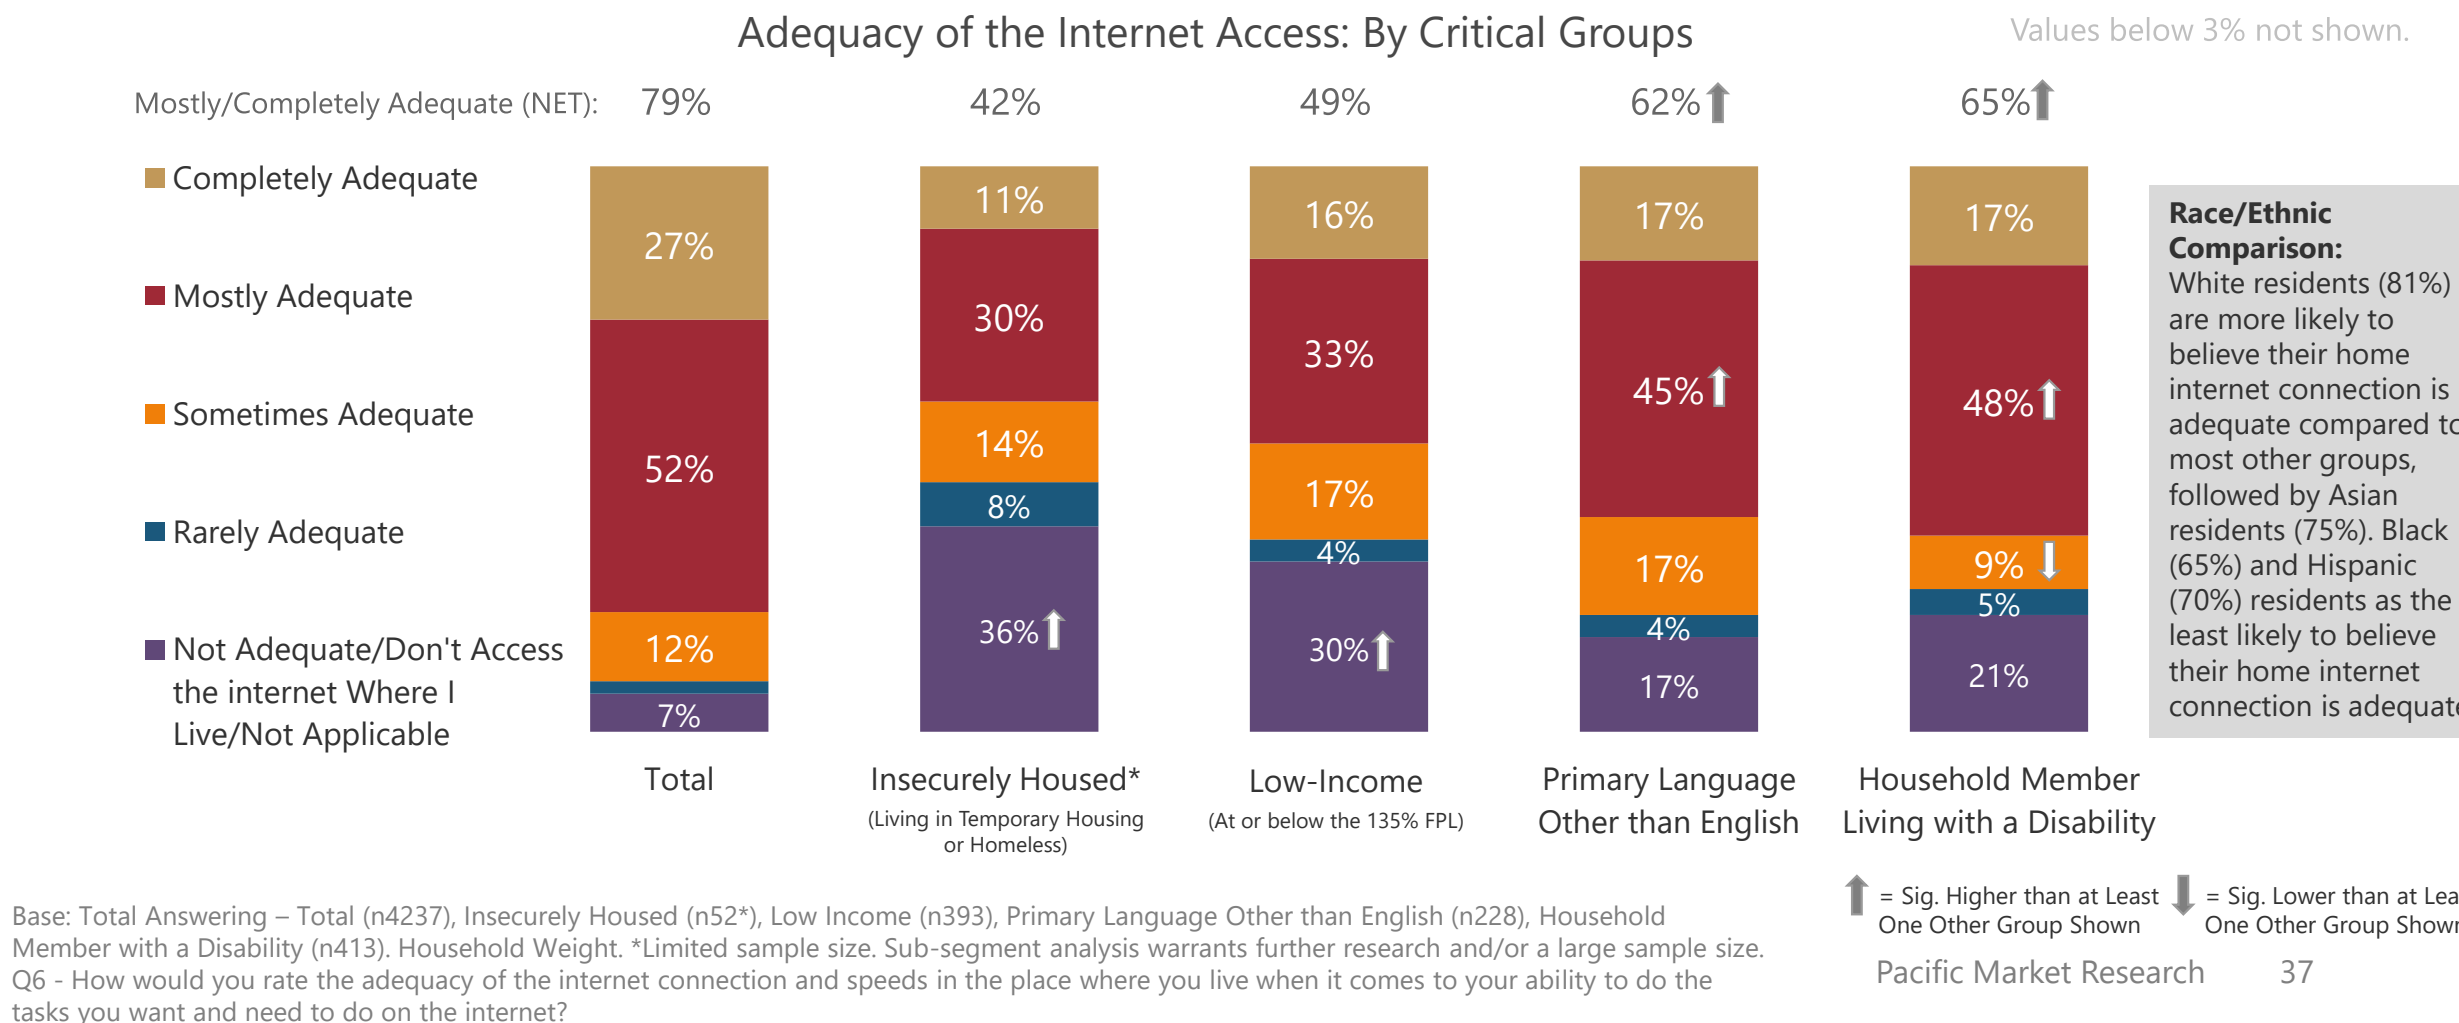

Households with a fixed broadband internet connection are more likely to report adequate connections. On the other hand, those who rely on cellular data only or free internet are less likely to feel they have adequate connections.

Base: Total Answering – Total (n4237), Both Fixed Broadband and Cellular Data Subscription (n1870), Only Fixed Broadband Subscription (n1900), Only Cellular Data Subscription (n145), Free Internet Access Only (n50). Household Weight.
Q6 - How would you rate the adequacy of the internet connection and speeds in the place where you live when it comes to your ability to do the tasks you want and need to do on the internet?

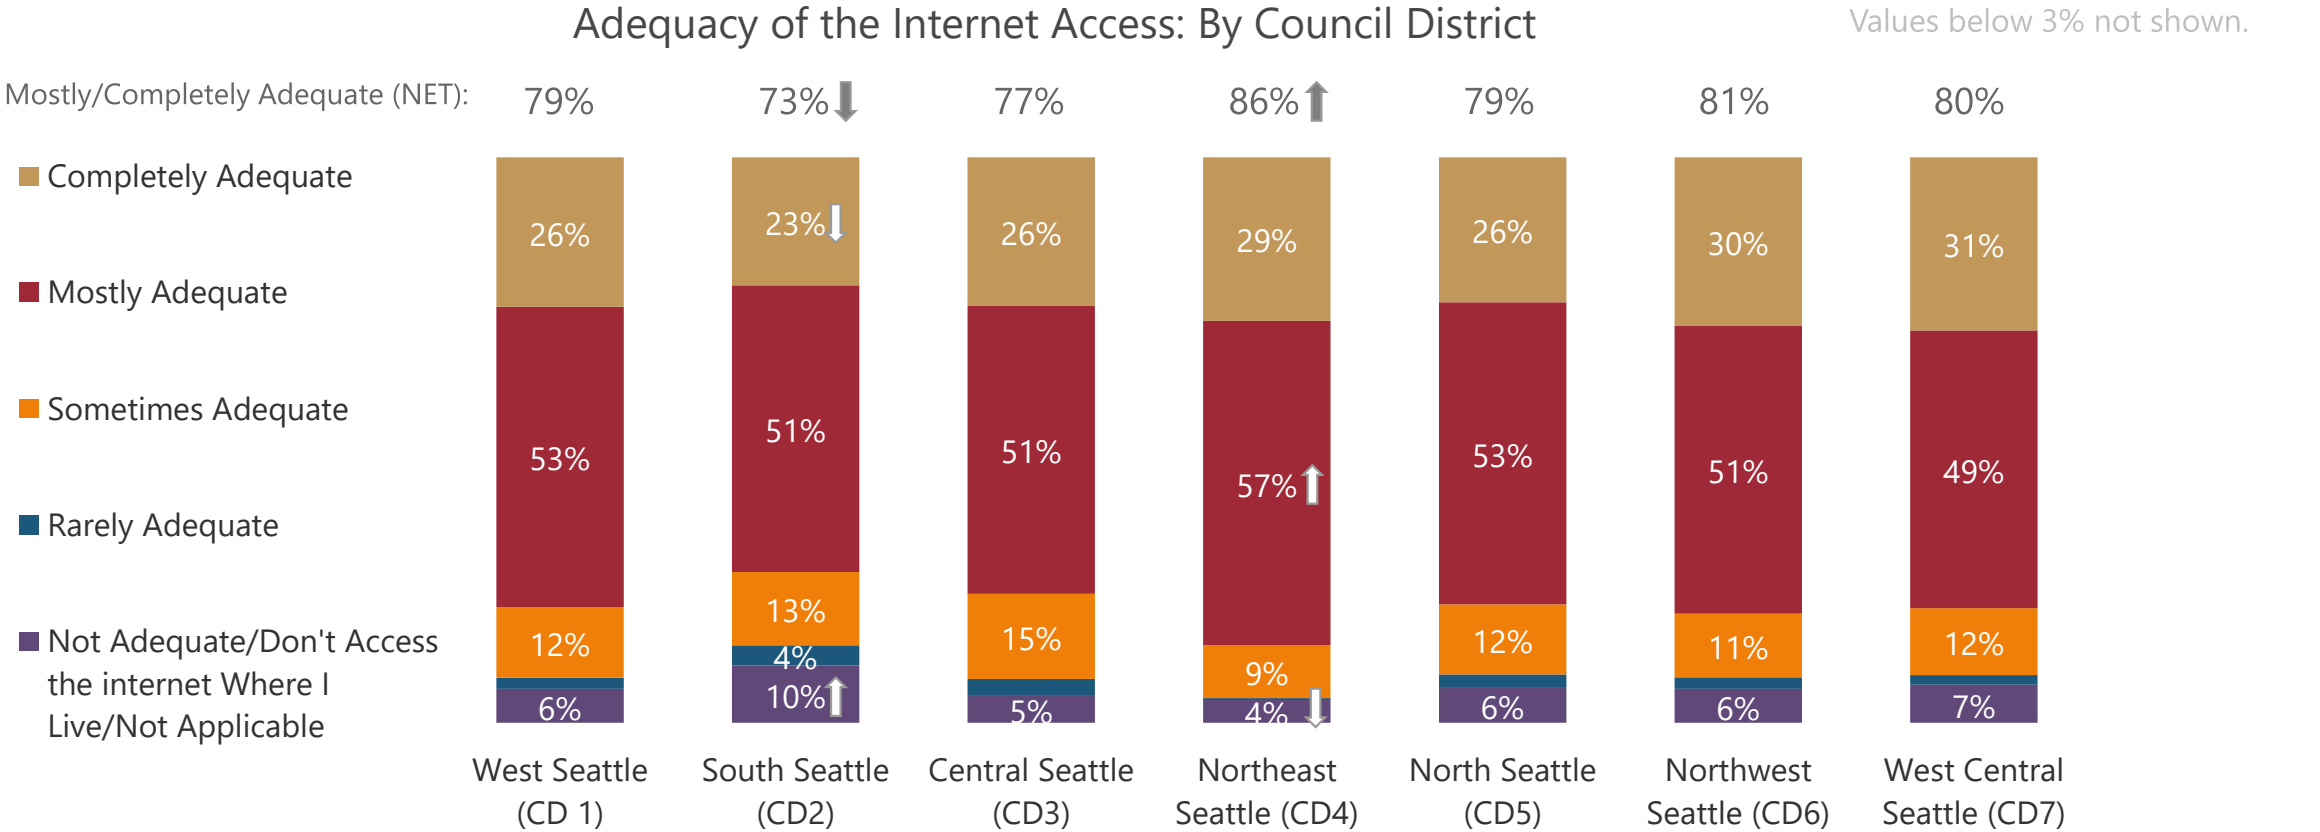

Residents that are insecurely housed or living at or below the poverty level are most likely to have inadequate access or no access at all where they live.

Those who primarily speak a language other than English or have a household member living with a disability are also less likely than the general population to assess their internet as adequate for their needs.

With the exception of those in South Seattle (CD 2), approximately four out of five residents feel their internet access is at least mostly adequate.

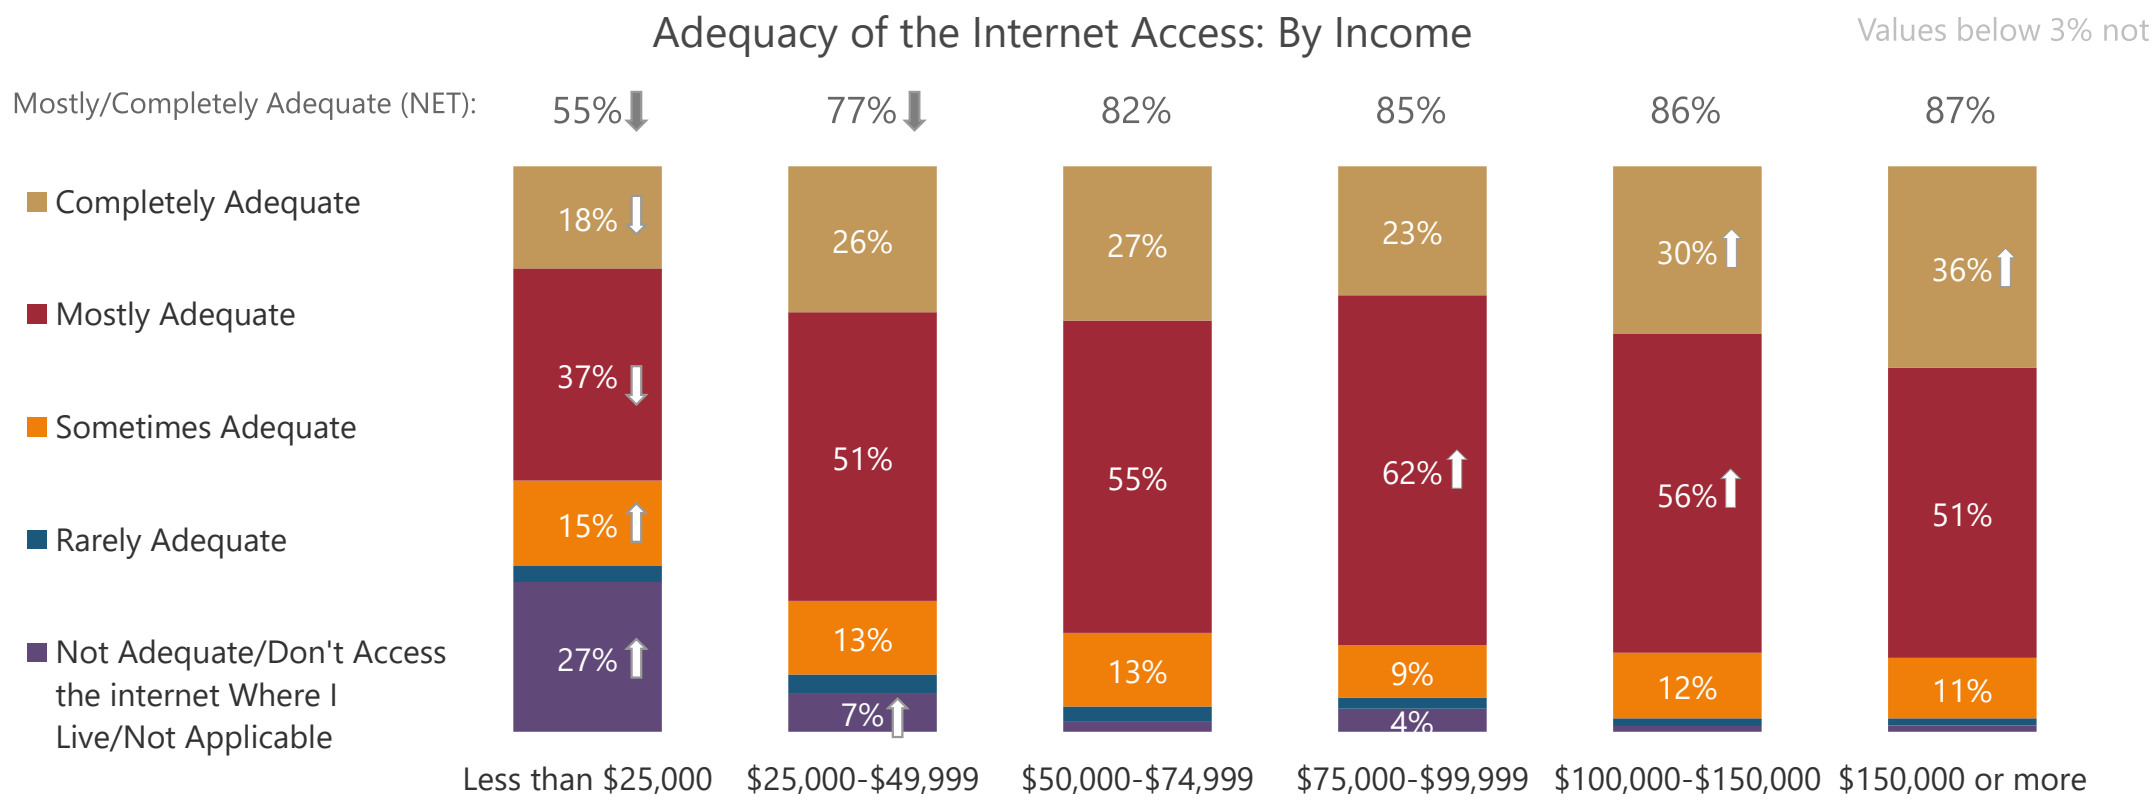

One in four (27%) of those living in South Seattle (CD 2) do not feel that the internet in their home is mostly or completely adequate for their needs.

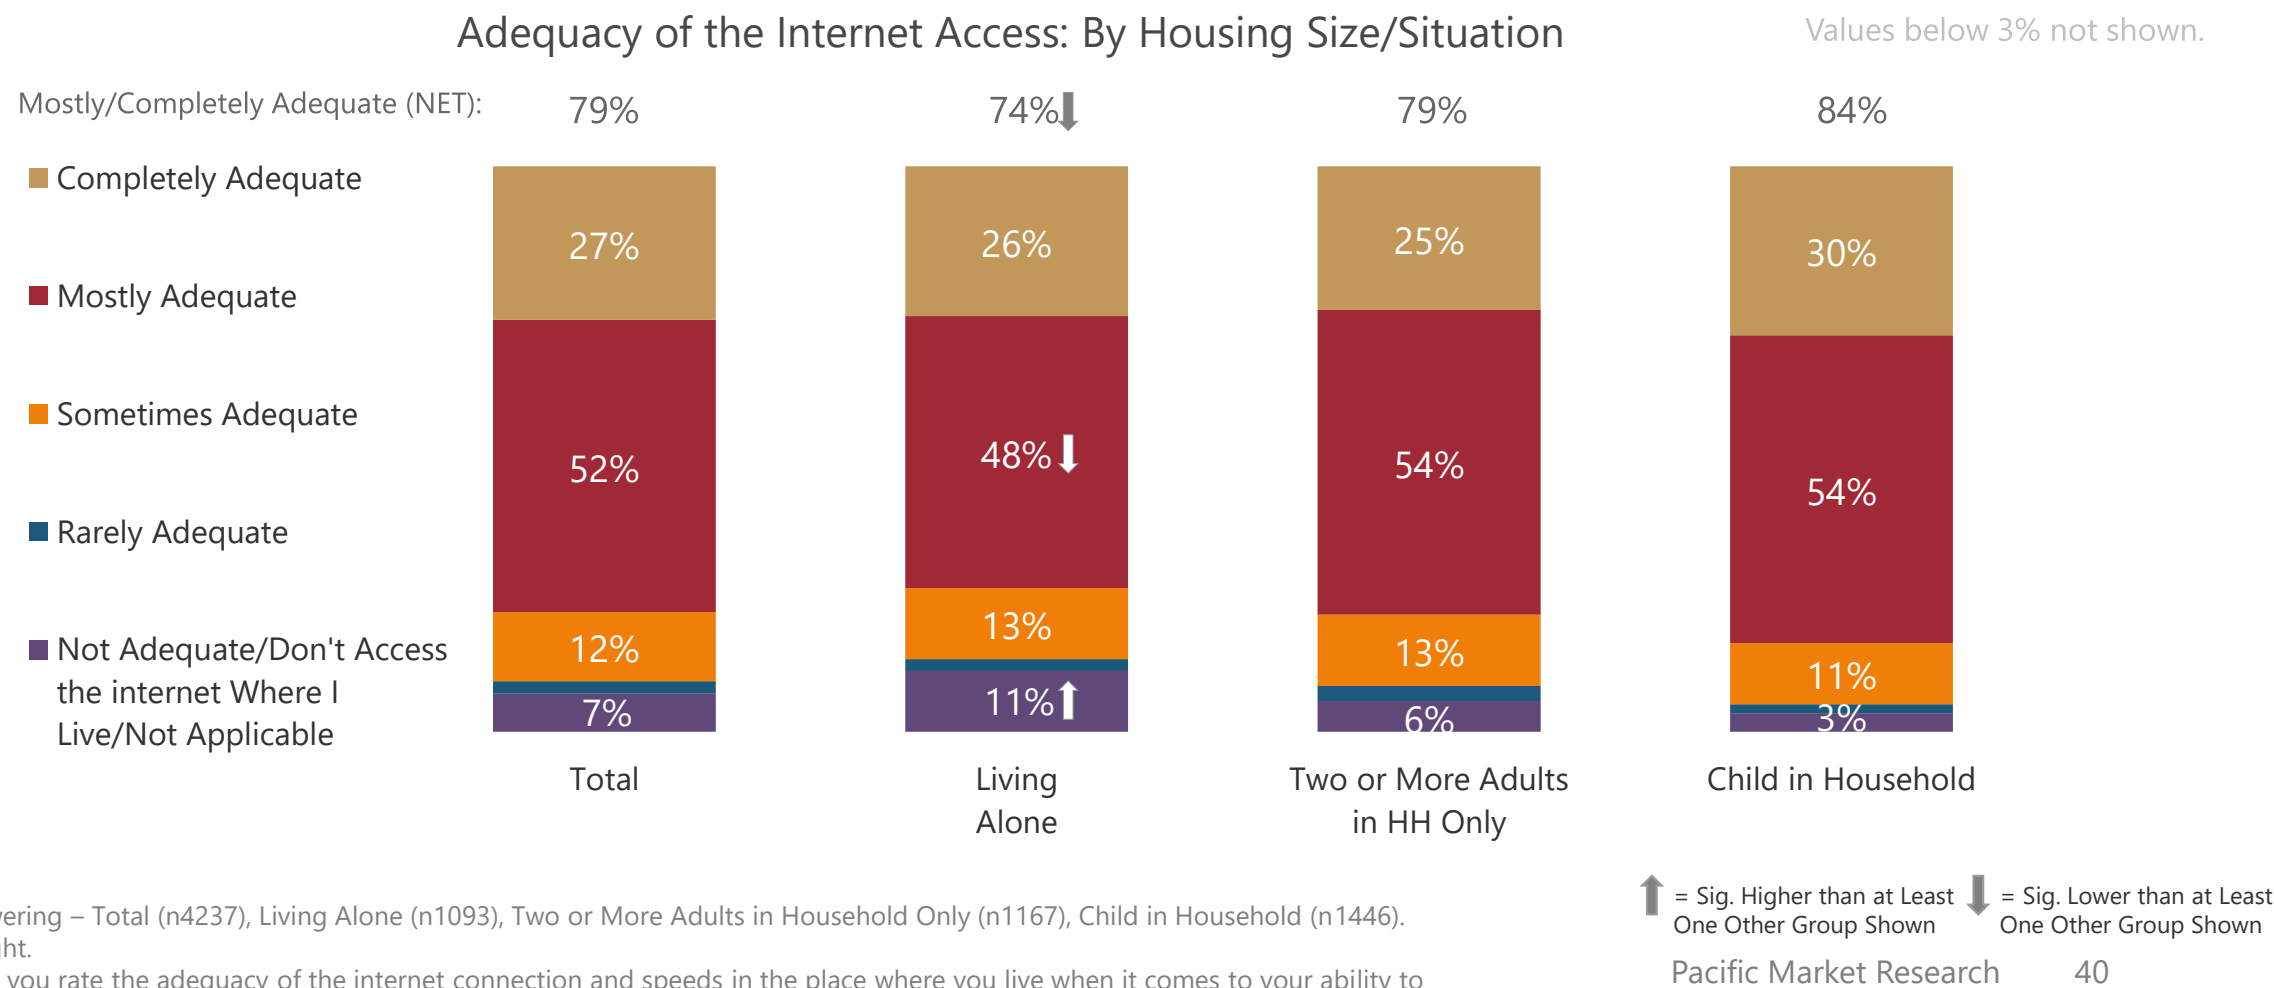

Base: Total Answering – Council District 1 (n622), Council District 2 (n592), Council District 3 (n517), Council District 4 (n574), Council District 5 (n766), Council District 6 (n641), Council District 7 (n464). Household Weight.
Q6 - How would you rate the adequacy of the internet connection and speeds in the place where you live when it comes to your ability to do the tasks you want and need to do on the internet?

Those with higher incomes are more likely to endorse the adequacy of their internet.

Only just over half (55%) of very low income households (under \$25K) feel that their internet is adequate for their needs.

Households with two adults only or those with children are significantly more likely than single occupant households to believe their internet access is at least mostly adequate for their needs.

Base: Total Answering – Total (n4237), Living Alone (n1093), Two or More Adults in Household Only (n1167), Child in Household (n1446).
Household Weight.
Q6 - How would you rate the adequacy of the internet connection and speeds in the place where you live when it comes to your ability to do the tasks you want and need to do on the internet?

Obtaining Access

- Type of Internet Services and Providers Where they Live
- Total Approx. Monthly Cost of Internet Services
- Primary Device Used to Access the Internet at Residence
- Top reasons why residents do not use the internet more
- Top reasons why residents do not have internet where they live
- Low Income Household Internet Access Summary

A vast majority of Seattle households have a broadband subscription for internet access in their home.

Most of those with broadband are connected with a fixed broadband subscription (88%) such as Comcast or Century Link.

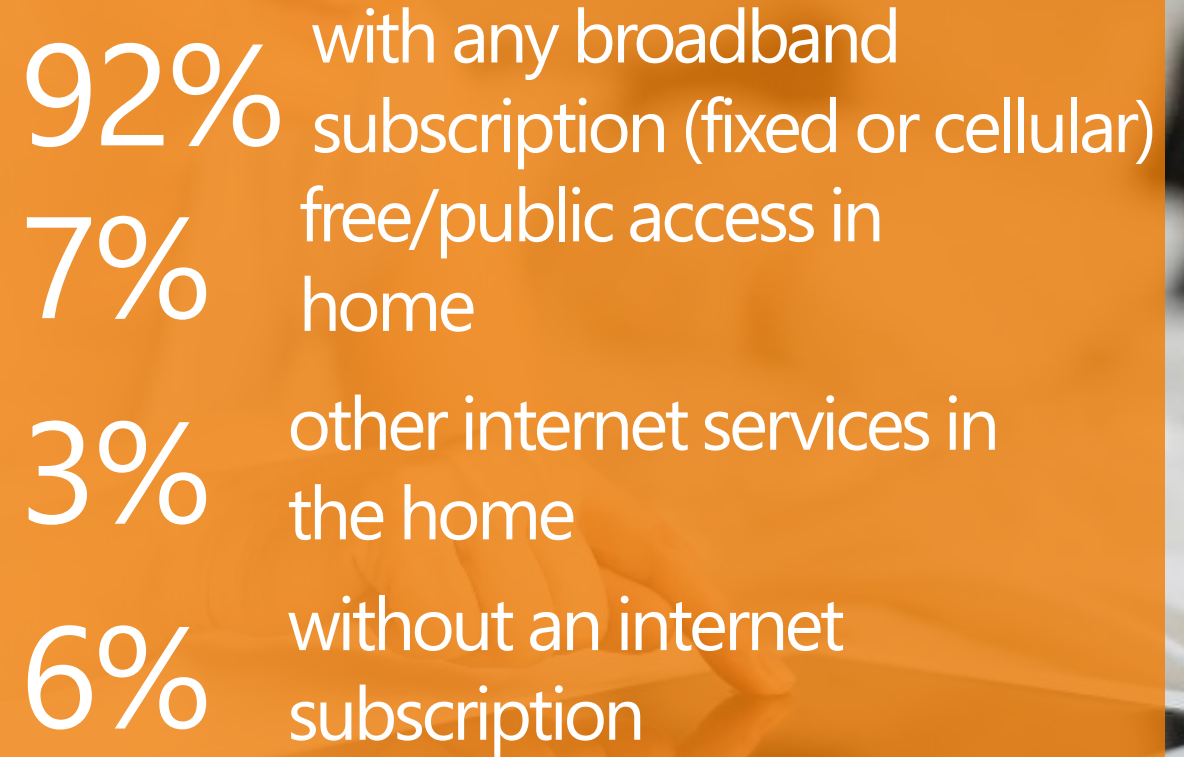

Among Total:

Comcast cable internet	57%
Century Link DSL or fiber internet	25%
Wave cable internet	9%

Some residents have access to the internet through multiple subscriptions. Total connections will add up to more than 88%.

Four (4%) percent rely on cellular data plans alone and few rely on public or free access in their home, or have no internet subscription at all.

Those in lower socio-economic status geographic areas and those with a lower household income are significantly more likely to have no fixed broadband subscription and instead rely on other means to get access in their homes.

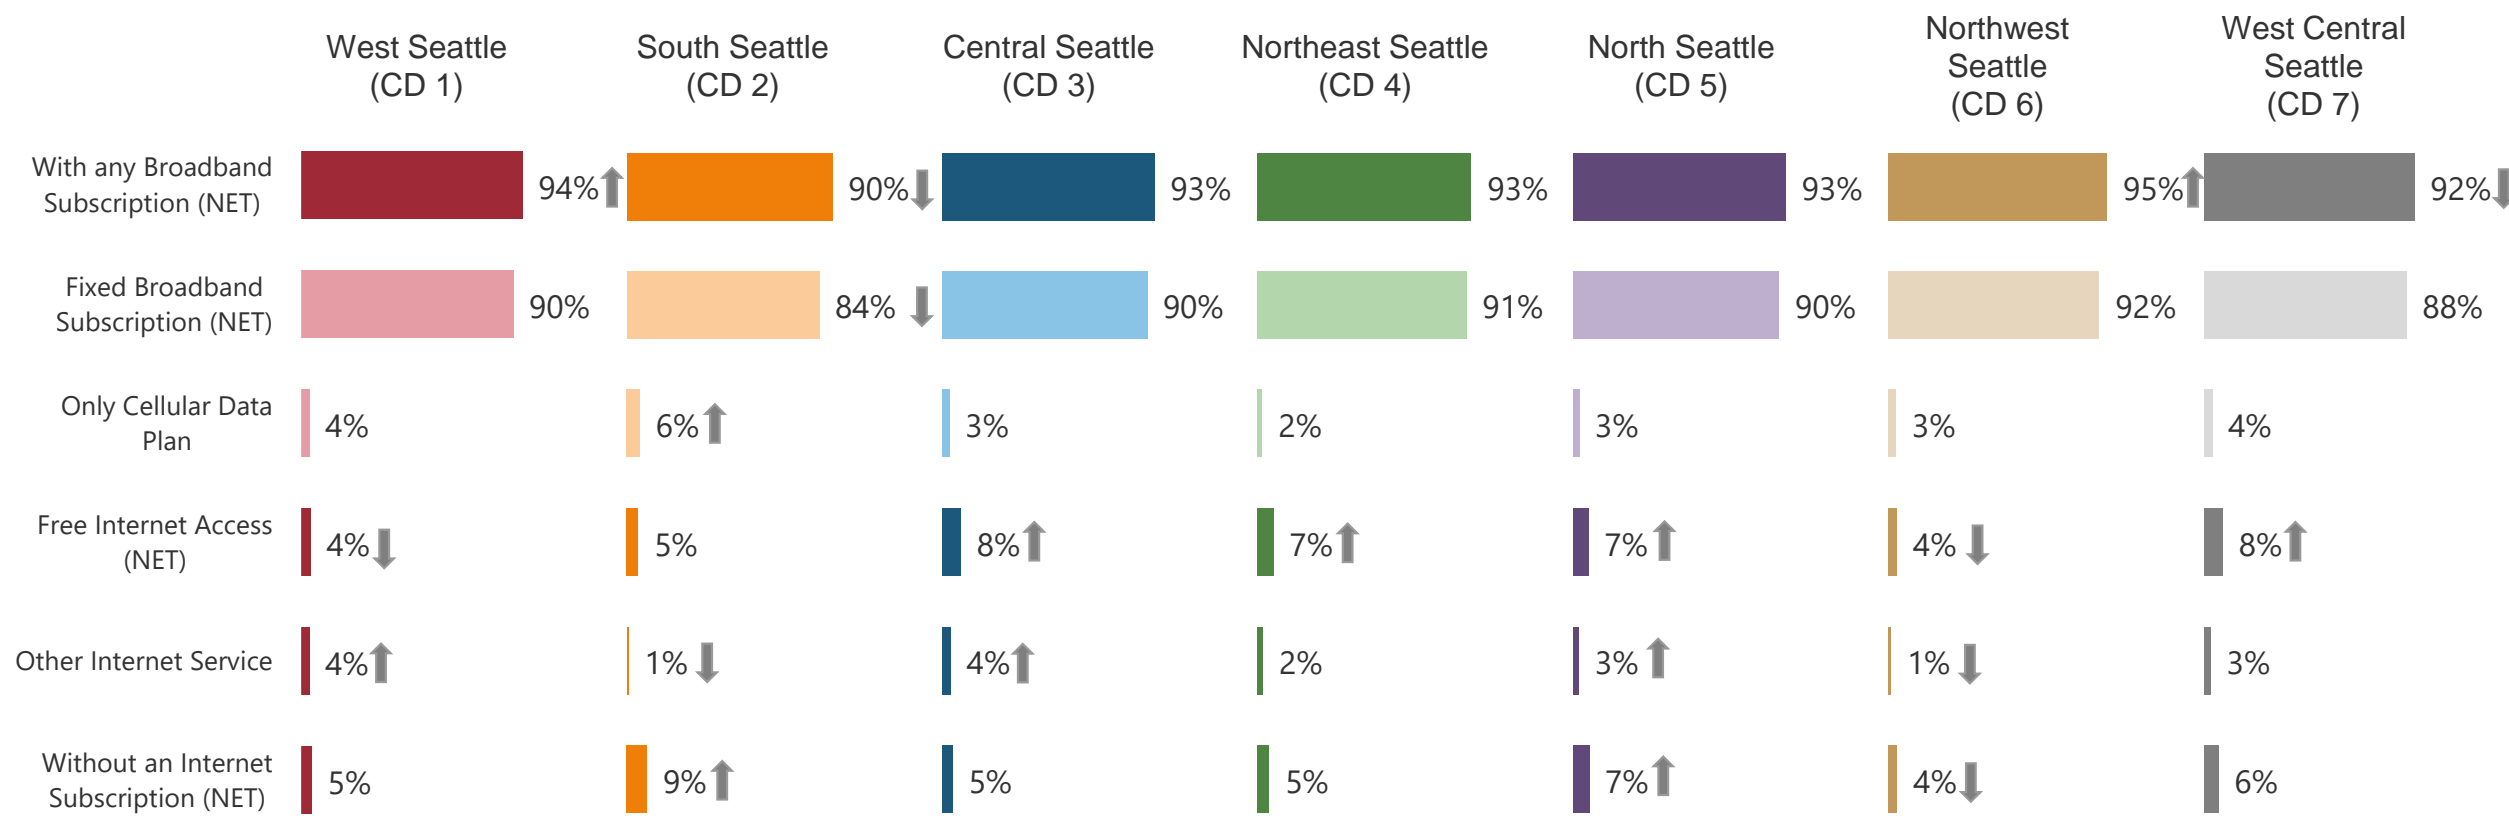

Note: Some residents have access to the internet through multiple means. Total connections will add up to more than 100%.

Although the majority have internet subscriptions, those living in NW and West Seattle (CD 6 and 1) are the most likely to have a broadband subscription.

Those living in South Seattle (CD 2) are the most likely to be limited in their access due to fewer fixed subscriptions and greater likelihood to rely on cellular data plans or not have any internet subscriptions at all. Central Seattle residents (CDs 3 and 7) are the most likely to use free or public internet where they live.

Type of Internet Services and Providers Where they Live: By Council Districts

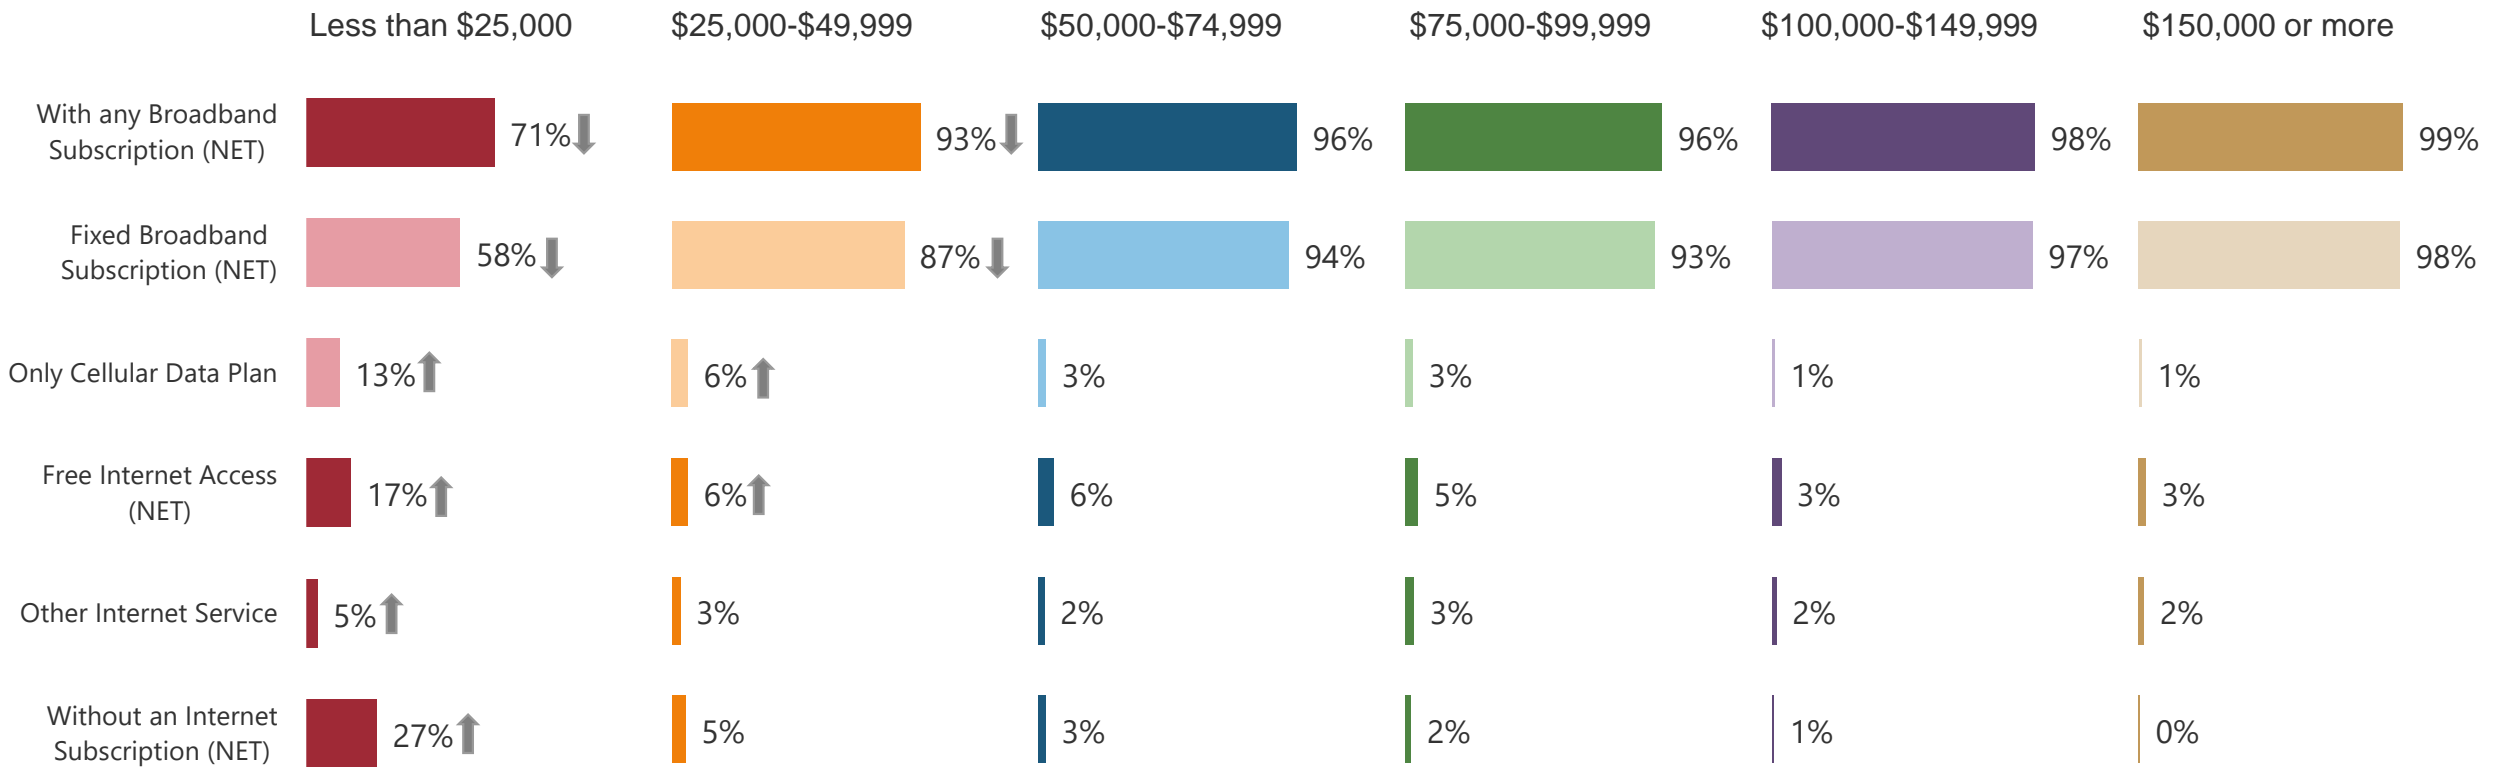

↑ = Sig. Higher than at Least One Other Group Shown ↓ = Sig. Lower than at Least One Other Group Shown

Base: Total Answering – Council District 1 (n628), Council District 2 (n600), Council District 3 (n526), Council District 4 (n575), Council District 5 (n772), Council District 6 (n641), Council District 7 (n469). Household Weight.
Q4 - What are all the ways you get internet in the place where you live?

Household income is a major factor in the source of in-home internet.

Those with under \$25,000 household incomes are significantly more likely to have no internet subscription. They are also more than double as likely (when compared to households with higher incomes) to rely on a cellular data plan as the only source of internet access.

Type of Internet Services and Providers Where they Live: By Income

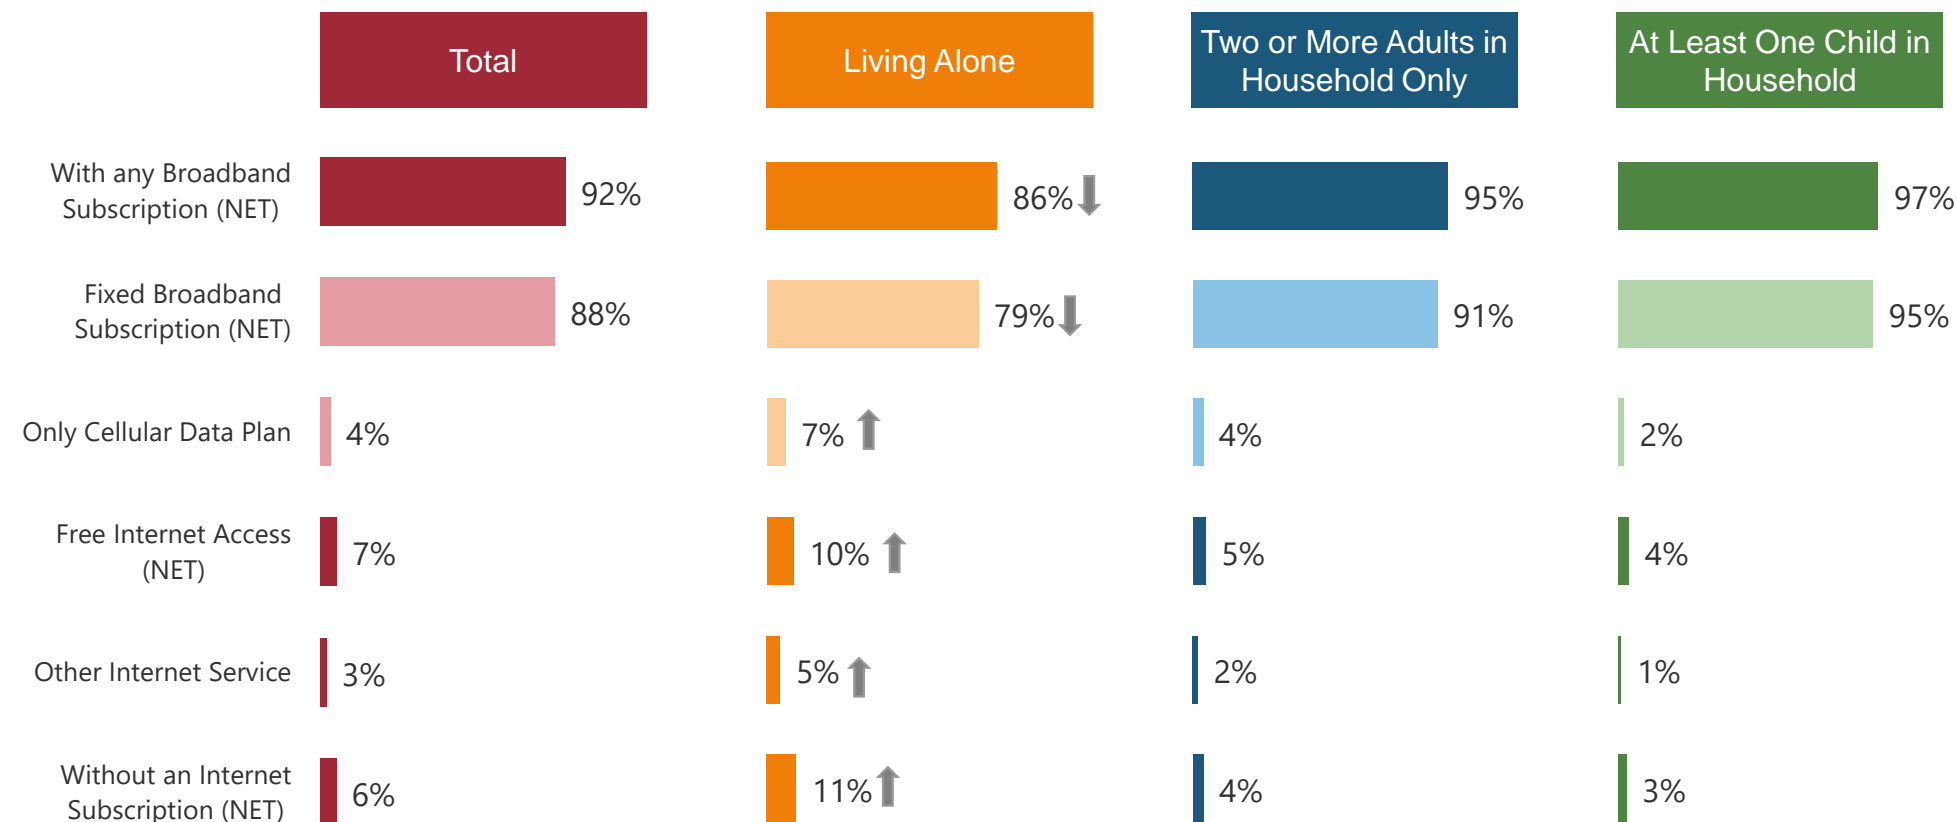

↑ = Sig. Higher than at Least One Other Group Shown ↓ = Sig. Lower than at Least One Other Group Shown

Base: Total Answering – <\$25K (n600), \$25K-\$50K (n496), \$50K-\$75K (n471), \$75K-\$100K (n431), \$100K-\$150K (n692), \$150K+ (n897). Household Weight.
Q4 - What are all the ways you get internet in the place where you live?

Those living alone are less likely to have broadband internet service and more likely to have cell data only, free or other means of access, or no internet at all.

Patterns of internet services/access are similar between those with two adults in the household only and those with at least one child in the household. Households with at least one child are significantly more likely to have fixed broadband provider subscriptions.

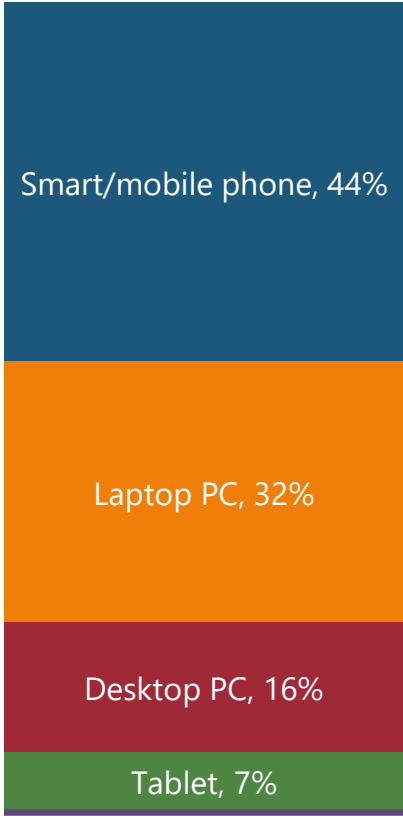

Type of Internet Services and Providers Where they Live: By Housing Size

↑ = Sig. Higher than at Least One Other Group Shown ↓ = Sig. Lower than at Least One Other Group Shown

Base: Total Answering – Total Pop (n4273), Living Alone (n1109), Two or More Adults in HH Only (n1183), Child in HH (n1448). Household Weight.
Q4 - What are all the ways you get internet in the place where you live?

Smartphone/ mobile phones and laptop computers are the most common primary devices used by Seattle residents.

Younger adults (18-34 years old) are more likely to use a smartphone or mobile phone as their primary device.

Those with high household incomes (\$150,000 or more) are more likely to use a laptop as their primary device.

Those with low household income (Less than \$25,000) are the most likely to not have access to any devices.

Values below 3% not shown.

Base: Total Answering - n4152. Individual Weight.
Q3 - Of all of the devices you have access to, which ONE device do you personally rely on or use most to access the internet in the place where you live?

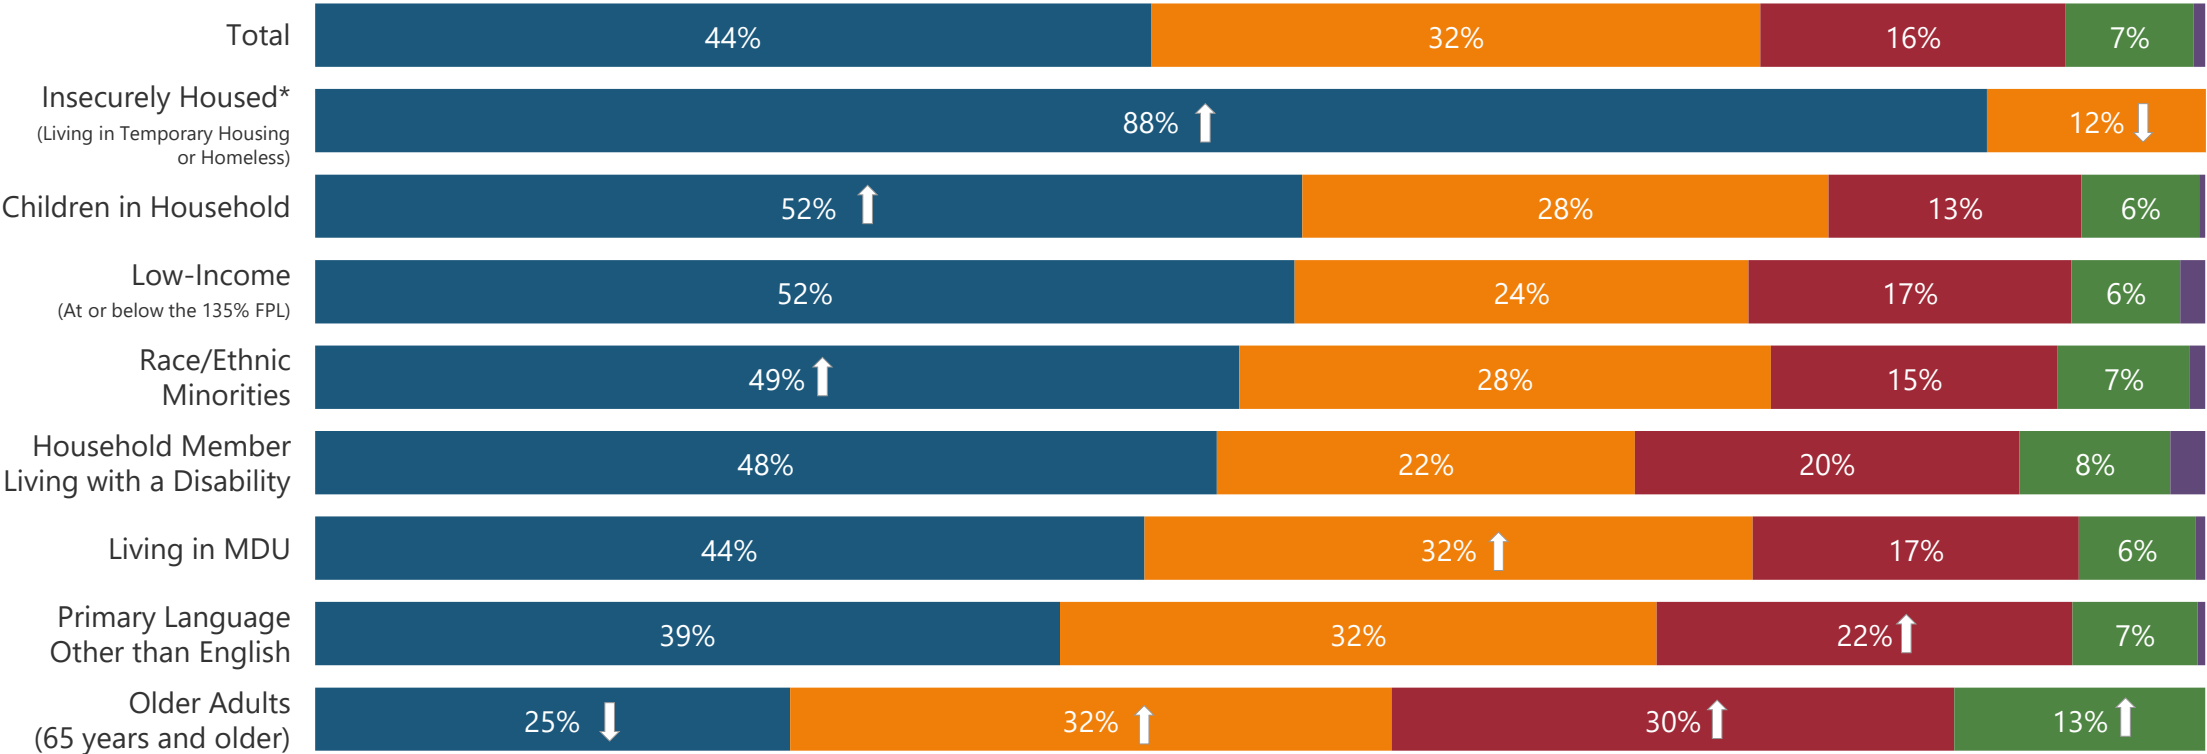

Reliance on a smartphone or mobile phone to access the internet is higher among the insecurely housed, along with households with children.

Older adults (age 65 and older) are the least likely to rely on their phone for this purpose, but more likely to rely on other devices including, desktop, laptop and tablet devices.

Primary Device Used to Access the Internet at Residence: By Impacted Groups

Values below 3% not shown.
Sorted by Smartphone/
Mobile phone use.

Smart/mobile phone Laptop PC Desktop PC Tablet Other devices

Race/Ethnic Comparison: Hispanics are significantly more likely to use a smartphone or mobile as their primary device, compared to White residents (54% vs. 42%). Blacks are significantly less likely to use a laptop computer as their primary device, compared to White residents (21% vs. 34%).

Base: Total Answering, Total (n4152), By Impacted Group – Primary Language Other than English (n222), Race or Ethnic Minority (n887), Insecurely Housed (n54*), Age 65+ (n808), Low Income (n344), Living in MDU (n1469), Living with a Disability (n389), Children in HH (n1450). Individual Weight. *Limited sample size. Sub-segment analysis warrants further research and/or a large sample size.
Q3 - Of all of the devices you have access to, which ONE device do you personally rely on or use most to access the internet in the place where you live?

Residents that rely on *only* a cellular data plan to access the internet have distinct differences from those with a fixed broadband subscription.

Those who are relying on a cell phone connection for internet access report frustrations with reliability and speeds; however, they are more likely than others to have lower incomes or living at or below the poverty level – which may be preventing them from accessing a fixed broadband subscription.

4% of Seattle households are reliant on cellular data plans alone to access the internet.

Those with cellular data plan only...		Those with cellular data plan only...	
	Are less likely to consider their connection at least mostly adequate (66% vs. 84% with a FBBS*)		Are more likely to be unemployed (30% vs. 18% with a FBBS), and more likely to be disabled (19% vs. 4% with a FBBS)
	Are more likely to want faster speeds (30% vs. 18% with a FBBS)		Are more likely to live alone (54% vs. 30% with a FBBS); and to not have children in the home (10% do vs. 26% with a FBBS)
	Are less likely to have devices, other than their phone, in the home		Are more likely to live at or below 135% of the FPL (34% vs. 7% with a FBBS) and to have lower average incomes (\$43K vs. \$97K)
	Are nearly twice as likely to have household members visit the library or community center for internet access (48% vs. 24% with a FBBS)		Are more likely to only have a high school level education or some college compared to those with a FBBS
	Are more likely to 'apply for jobs online' at least weekly (speaking to the life stage/situation of these respondents)		Are more likely to be a racial or ethnic minority (55% are White vs. 68% with a FBBS; 13% are Black vs. 5% with a FBBS)

While one-third of those with a cell plan only are eligible for low income digital programs, usage among those who would qualify is low:

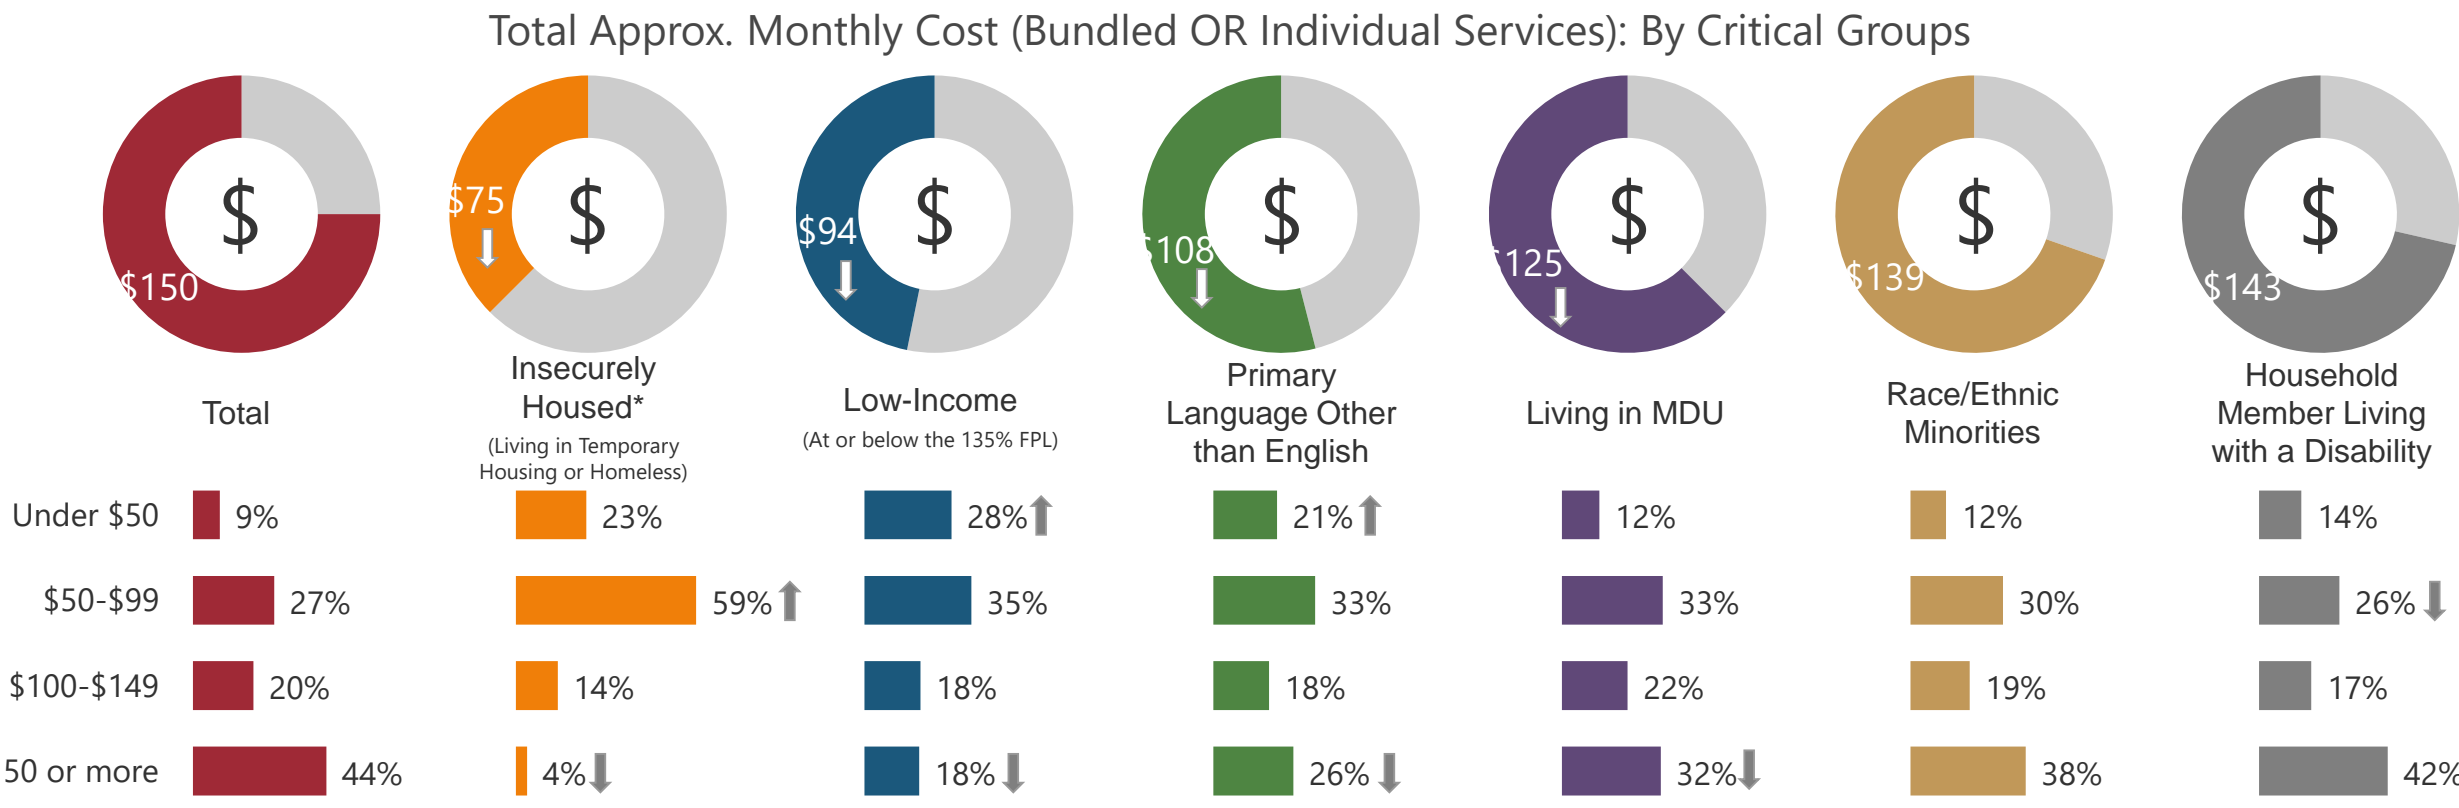

- Lifeline program (33%)
- Mobile Citizen/ InterConnection (15%)

*FBBS= Fixed broadband internet subscription

Most residents spend about \$150 per month on internet related services for their household, with many spending more than \$150.

Residents with established digital inequity spend less per month on internet related services than the general population. Many are paying for services with lower download speeds which they report as not adequate for their needs.

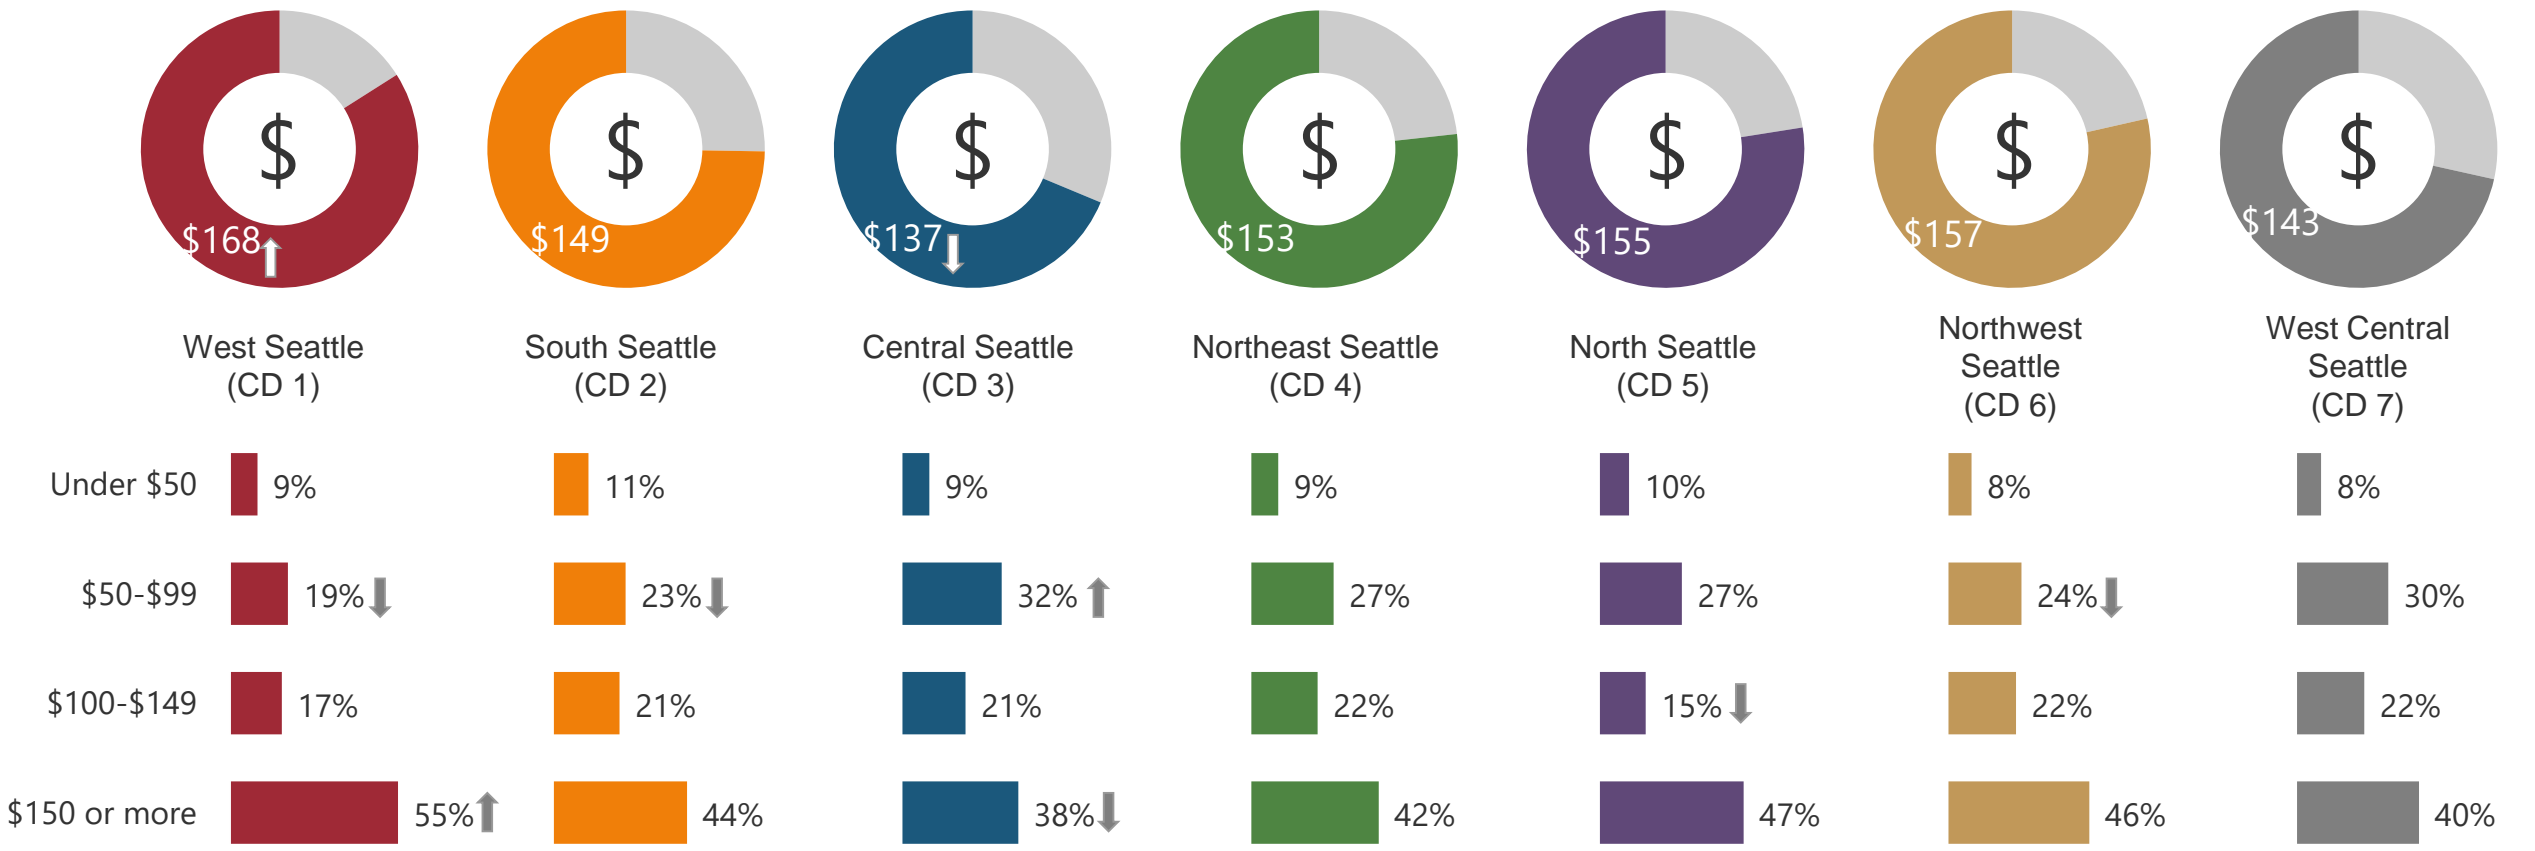

Race/Ethnic Comparison: White residents are significantly more likely to spend more on their internet subscription than Black or Asian residents (\$154, vs. \$126 and \$138). Two out of five black residents (20%) spend under \$50 per month on their internet subscriptions vs. White (9%) or Mixed (8%).

There are differences in what residents are paying for internet across the Council Districts.

Those living in Council District 1 (West Seattle) spend the most, while those living in Council District 3 (Central Seattle) spend the least amount.

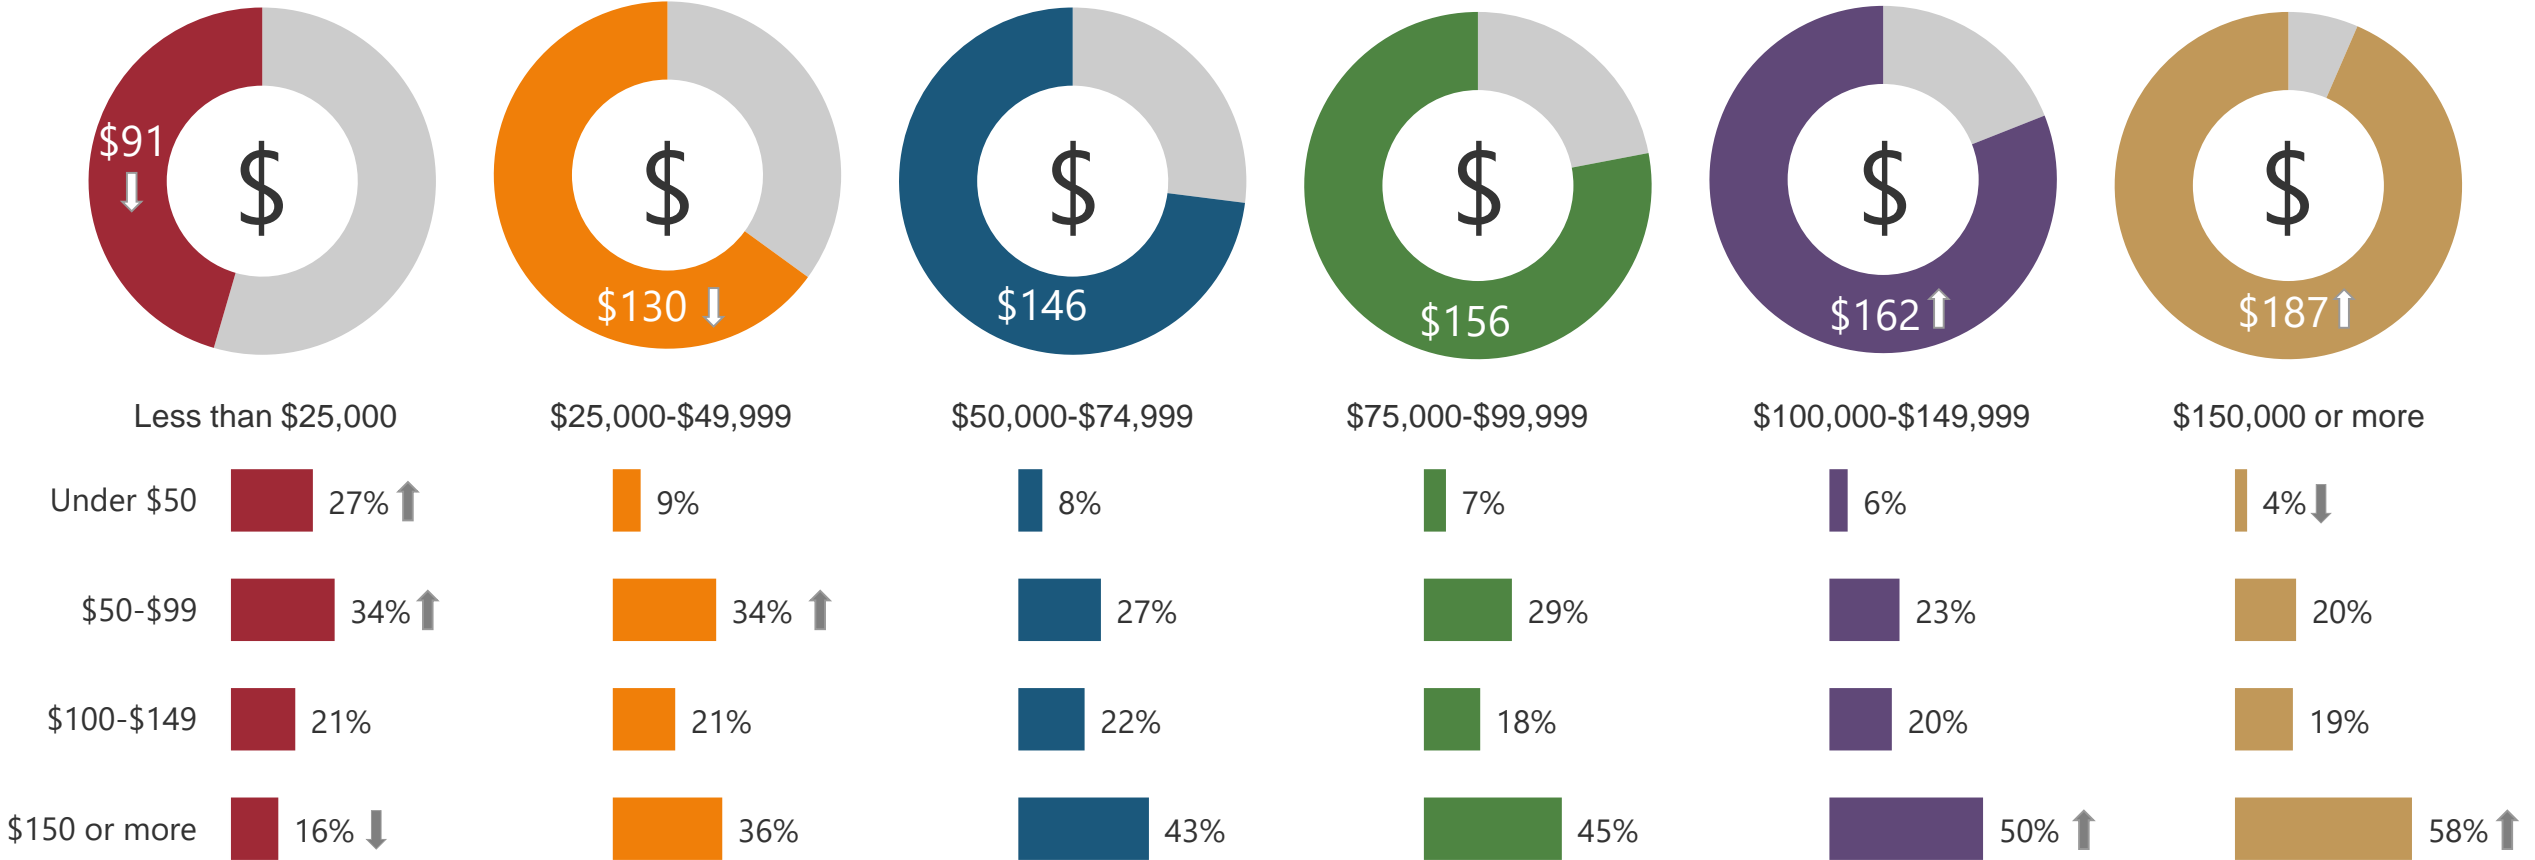

Total Approx. Monthly Cost (Bundled OR Individual Services): By Council Districts

Base: Total Answering – Council District 1 (n531), Council District 2 (n514), Council District 3 (n456), Council District 4 (n513), Council District 5 (n679), Council District 6 (n578), Council District 7 (n393). Household Weight.
Q5B - Please tell us approximately how much each internet service costs per month to your household.
Q5C - Please tell us the total cost per month for all bundled services.

As household income rises, so does the average monthly amount residents pay for internet related services.

Total Approx. Monthly Cost (Bundled OR Individual Services): By Income

Base: Total Answering – Income: <\$25K (n374), \$25K-\$49.9K (n427), \$50K-\$74.9K (n437), \$75K-\$99.9K (n403), \$100K-\$149.9K (n652), \$150K+ (n854). Household Weight.
Q5B - Please tell us approximately how much each internet service costs per month to your household.
Q5C - Please tell us the total cost per month for all bundled services.

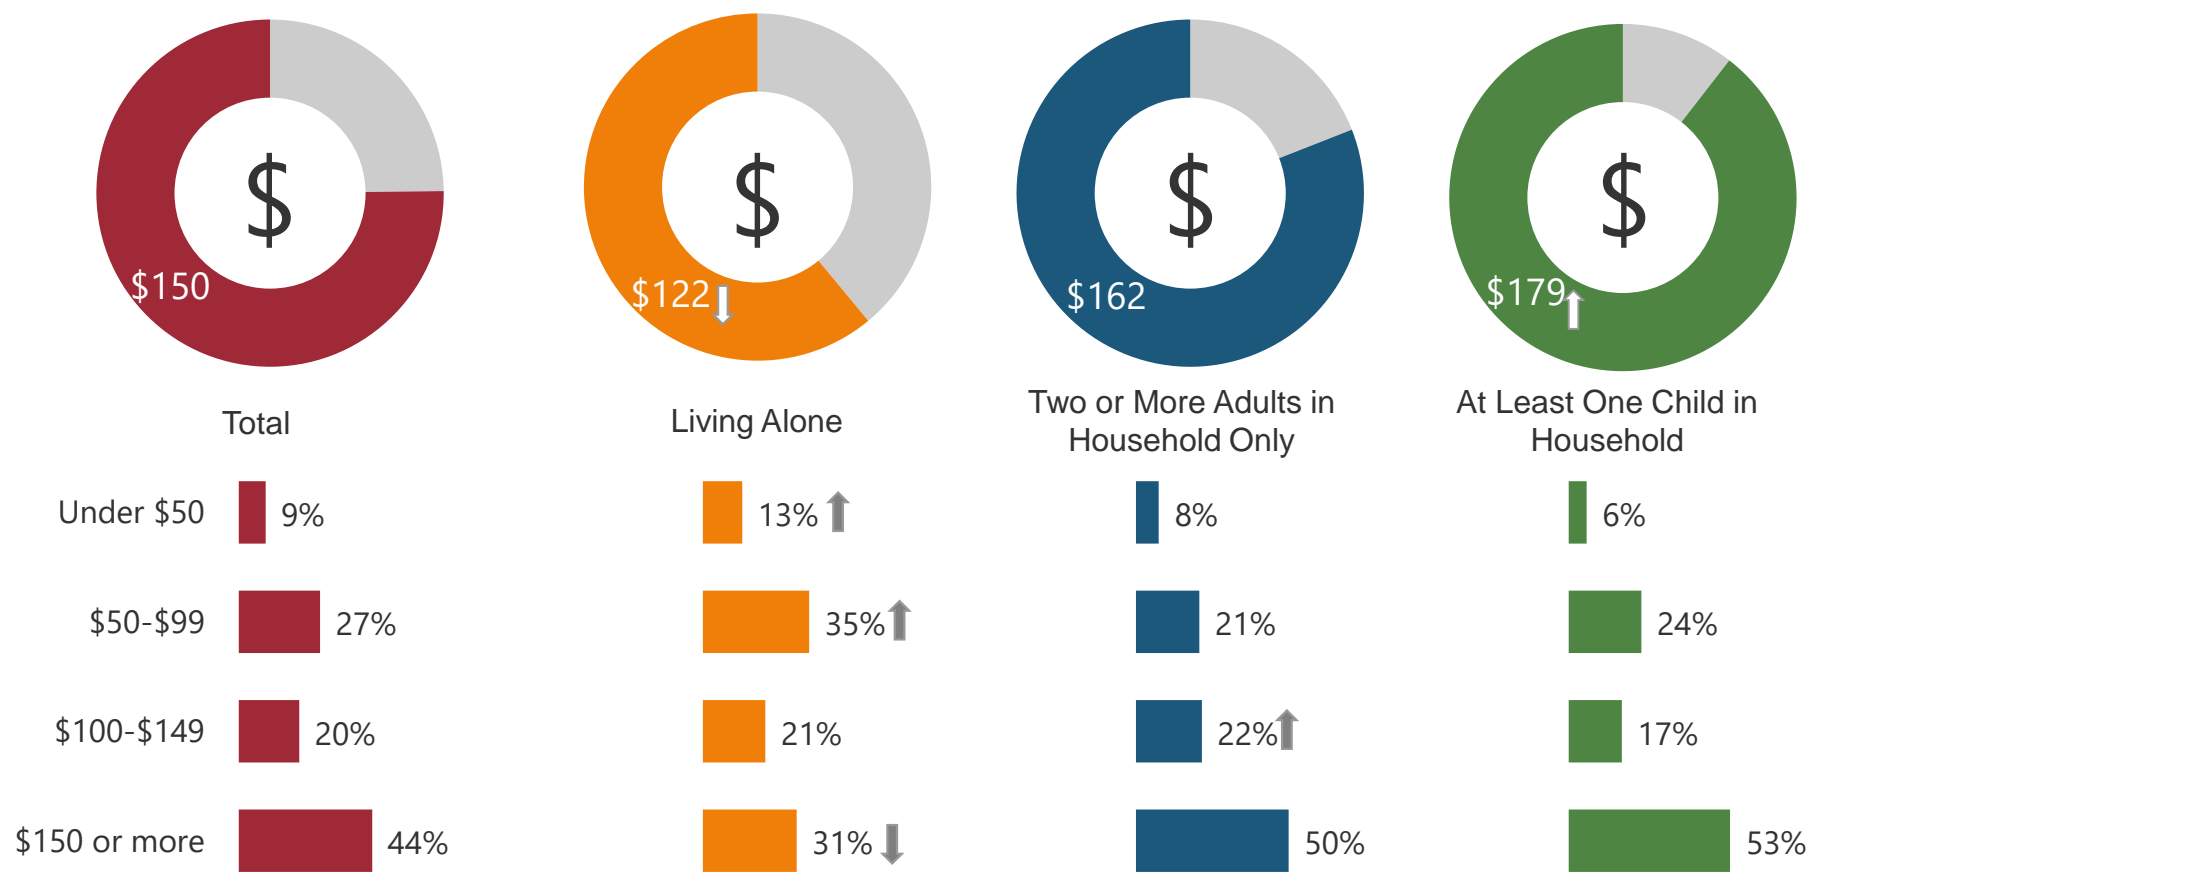

↑ = Sig. Higher than at Least One Other Group Shown ↓ = Sig. Lower than at Least One Other Group Shown

Pacific Market Research 51

On average, those with a child in the household pay about 50% more per month for internet related services than those living alone.

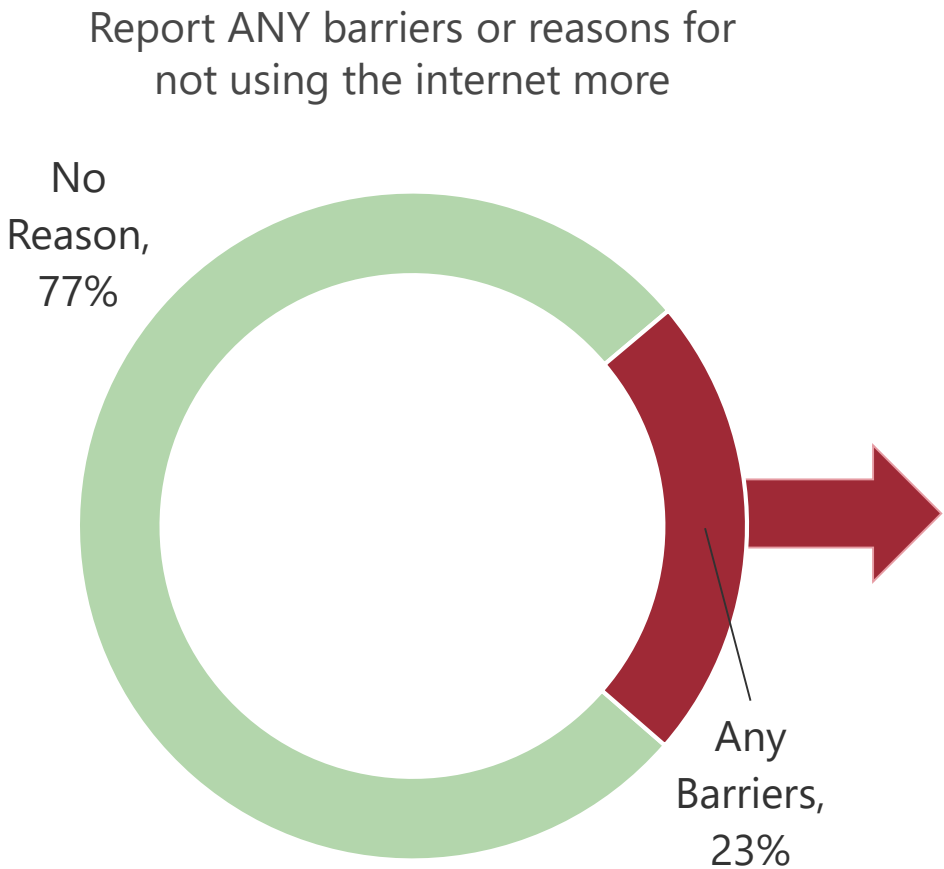

Those with multiple adults but no children in the household pay about 33% more, on average, than someone living alone, but about 10% less than households with at least one child.

Total Approx. Monthly Cost (Bundled OR Individual Services): By Housing Size

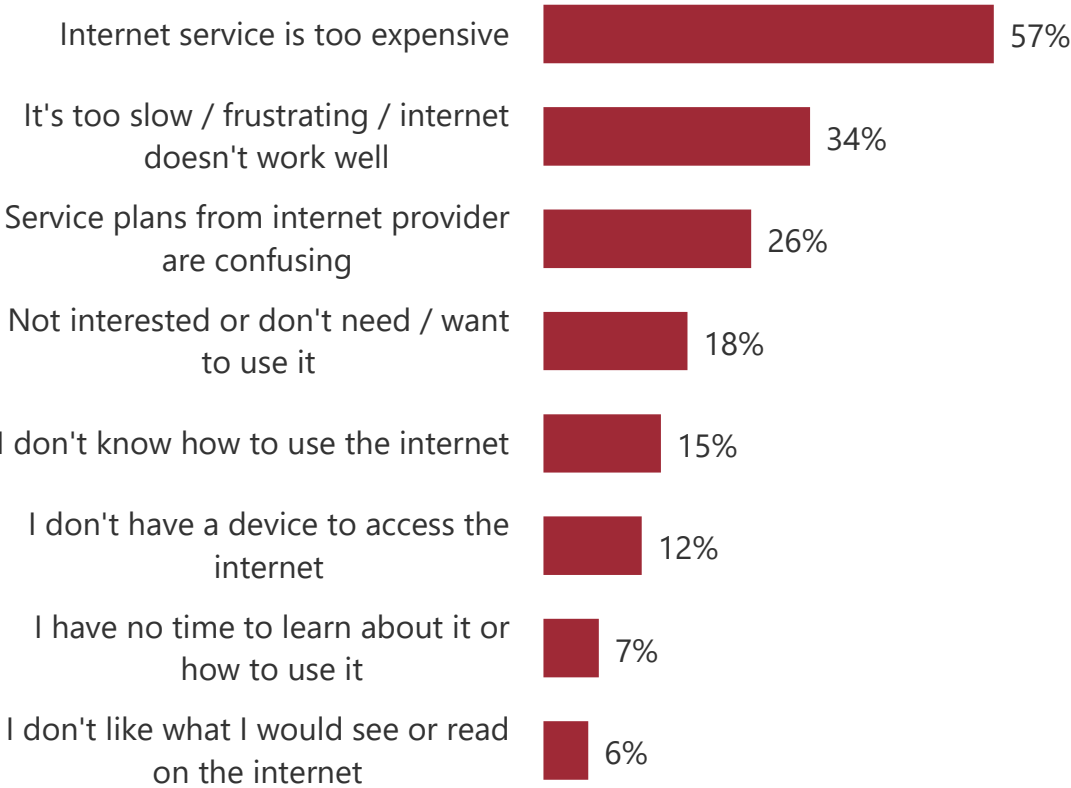

While most residents use the internet a great deal, almost one out of four cite something that is keeping them from using the internet more.

Cost limits residents' use, followed by speed, how well the internet works, and confusing service plans.

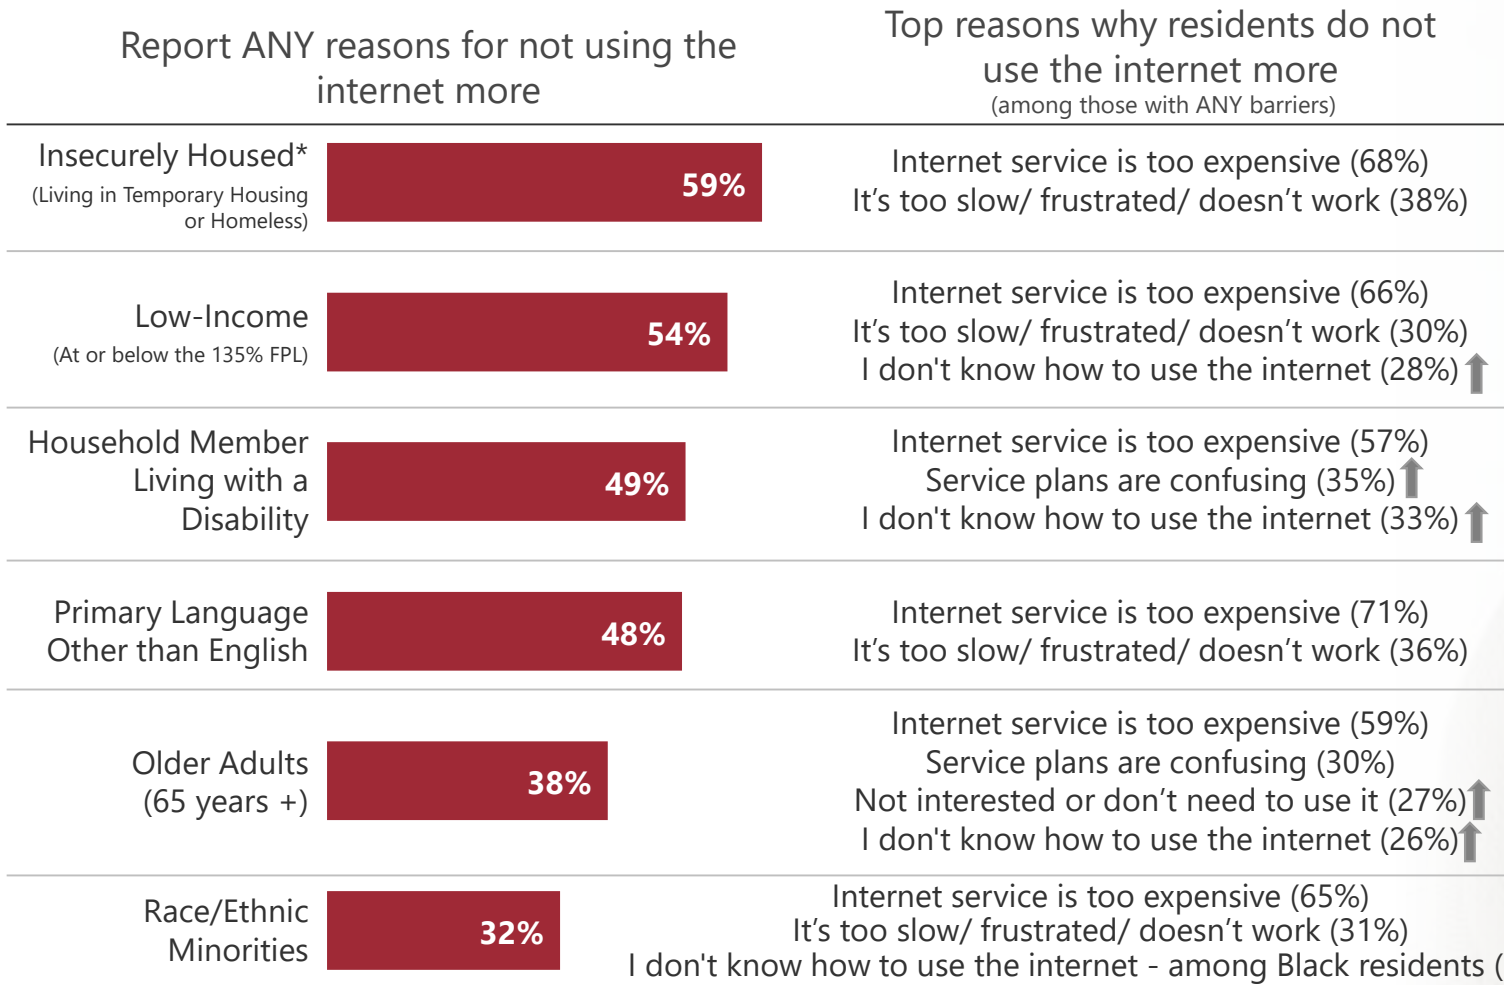

Top reasons why residents do not use the internet more
(among those with ANY barriers)

Base: Total Answering (n4095), Total with any barrier (n895). Individual Weight.
Q13 - The City would like to understand reasons why residents do not use the internet.
Please check the box next to all the reasons why you do not use the internet more.

Some populations are significantly more likely to cite barriers to using the internet more; the most common barrier is internet cost.

The lack of knowledge about using the internet is most likely to impact those living in poverty, impacted by a household disability, or older adults.

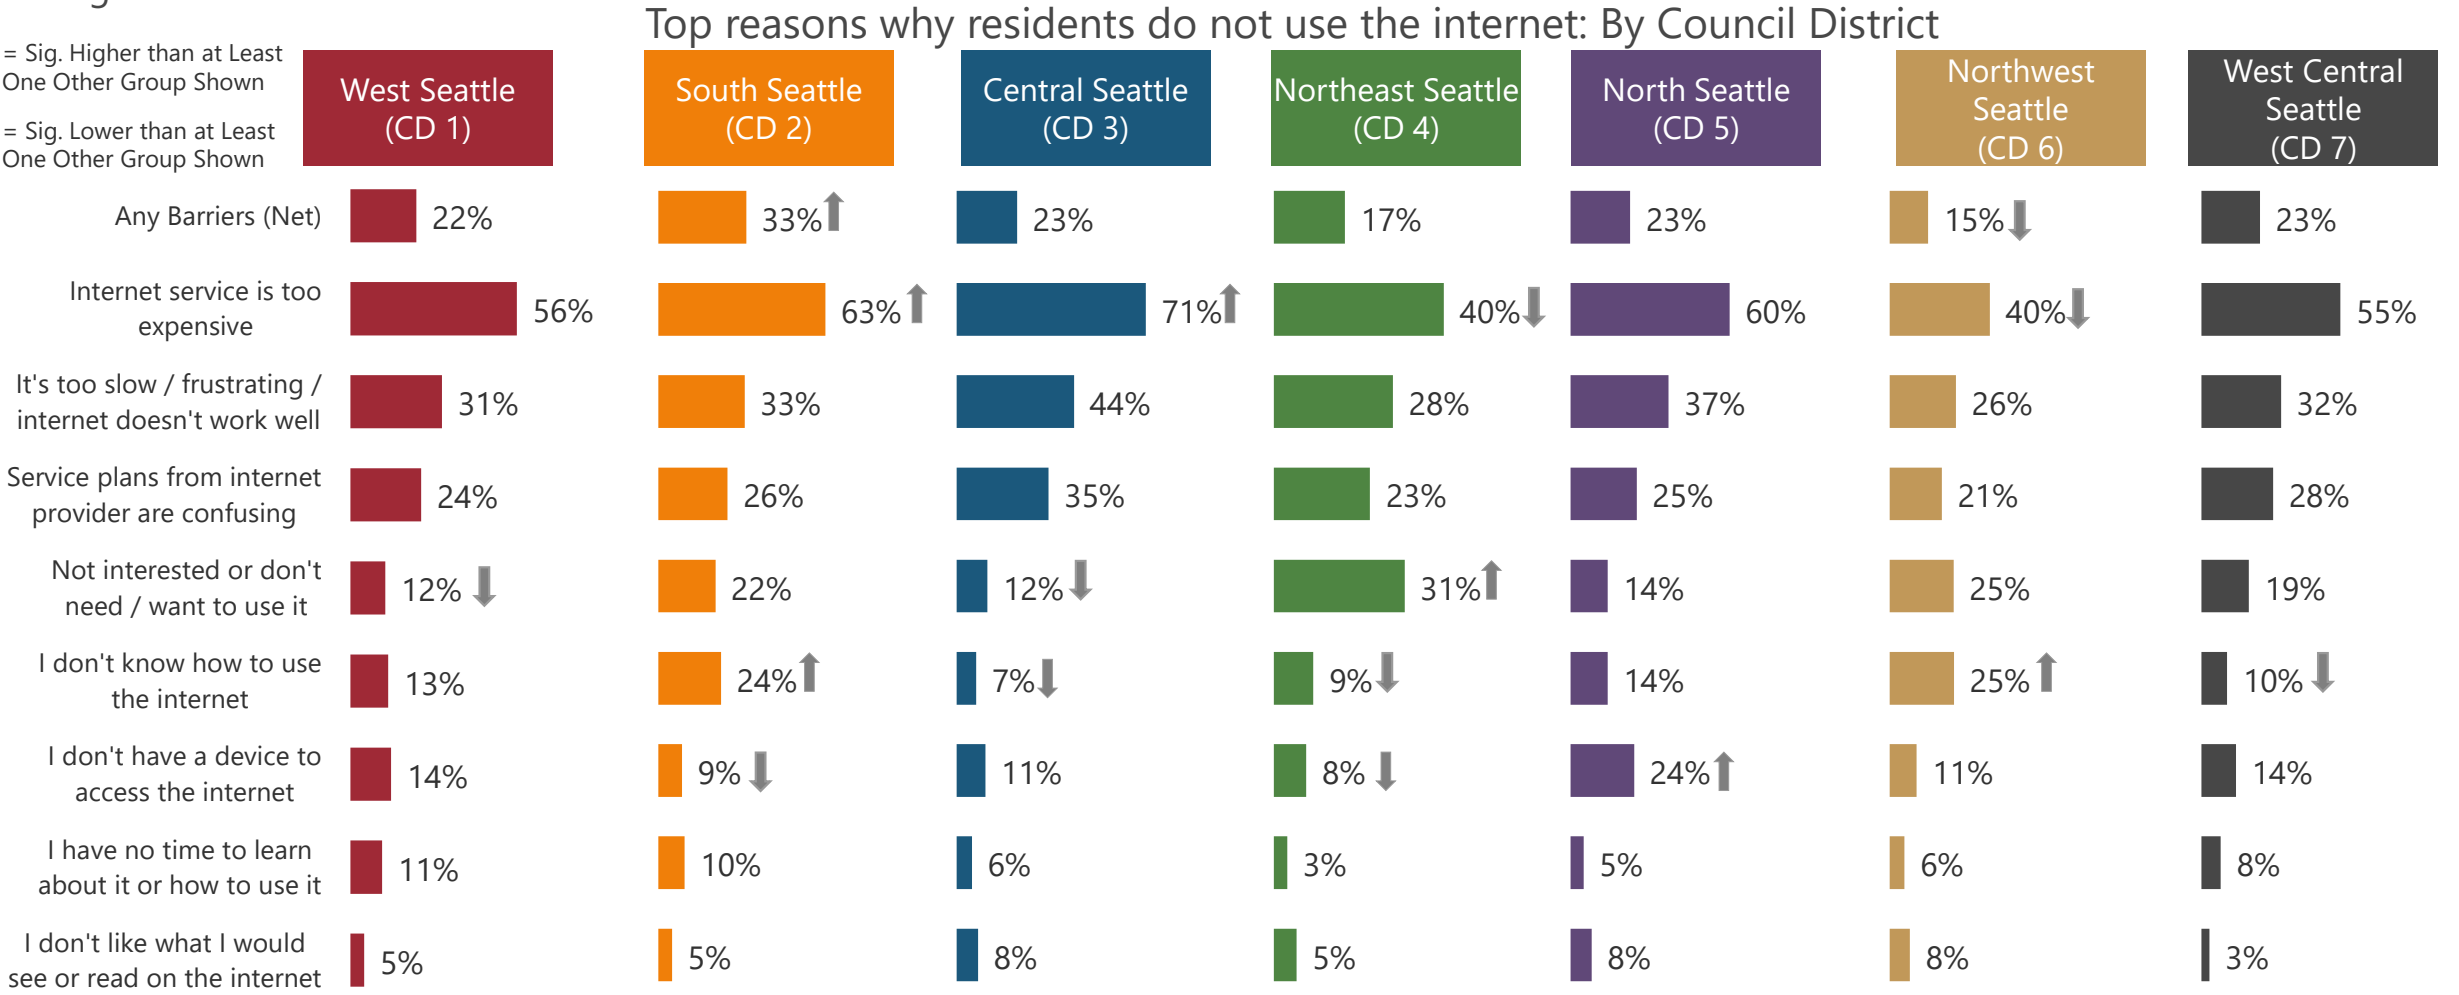

Base: Total Answering: Total/Have Any Barriers – Insecurely Housed (n51*/n33*), Low Income (n380/n206), Household Member with a Disability (n396/n181), Primary Language Other than English (n228/n96), Older Adults (n811/n239), Race/Ethnic Minority (n884/n269). Individual Weight.
*Limited sample size. Sub-segment analysis warrants further research and/or a large sample size. Q13 - The City would like to understand reasons why residents do not use the internet. Please check the box next to all the reasons why you do not use the internet more.

↑ = Sig. Higher than at Least One Other Group Shown
↓ = Sig. Lower than at Least One Other Group Shown

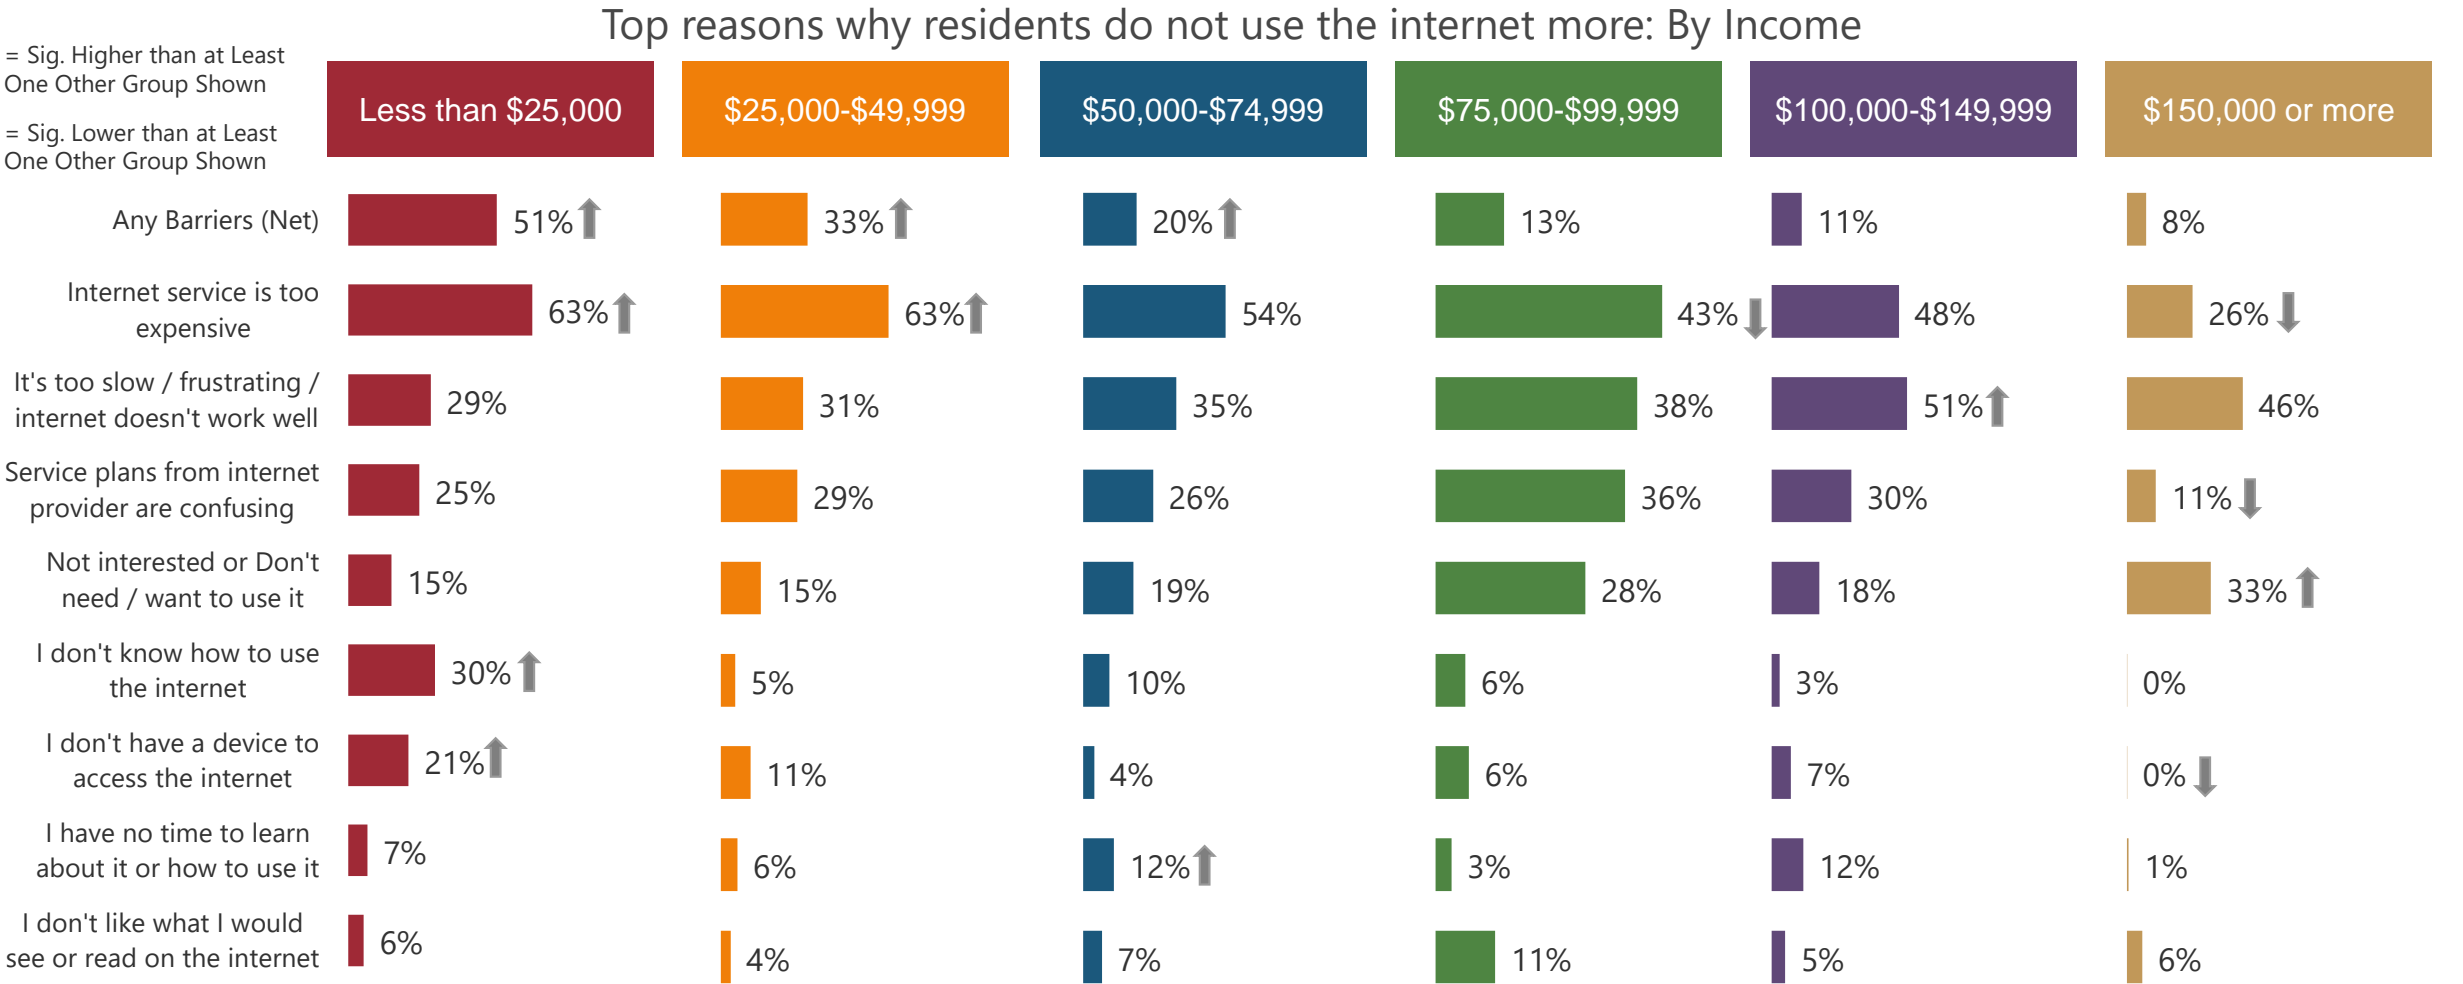

Regarding barriers to internet use, residents of South Seattle (CD 2) are the most likely to cite barriers, while those in Northwest Seattle (CD 6) are the least likely to do so.

Residents in Southeast and Central Seattle (CD 2 and 3) are more likely to cite service cost, those in Northeast (CD 4) are more likely to cite lack of interest, those in Districts 2 and 6 are more likely to cite not knowing how to use it, and those in North Seattle (CD 5) are more likely to cite not having a device.

Those with lower household incomes are the most likely to report barriers that prevent them from using the internet to a great extent.

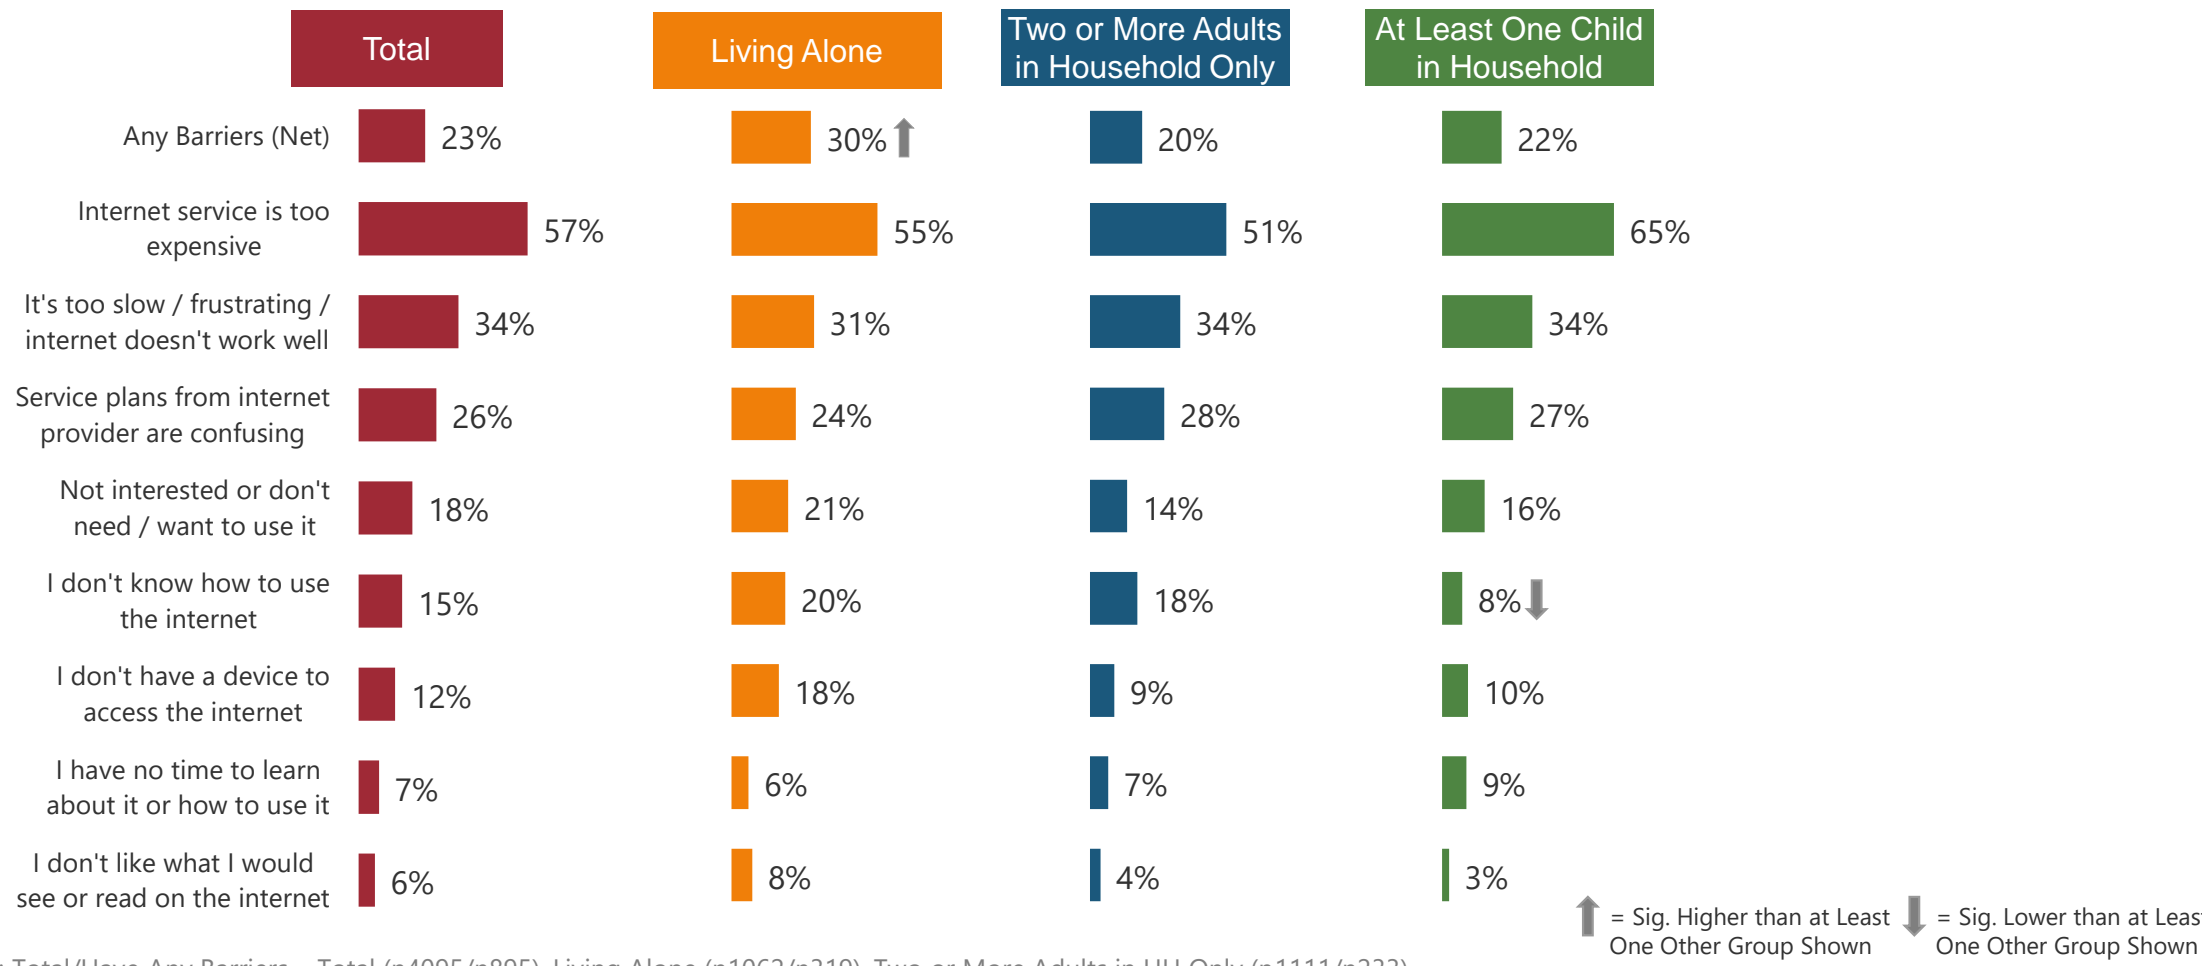

The most common barrier for residents with less than \$100,000 in household income is the service is too expensive. Those with higher household incomes are less concerned about the expense and frustrated more by the speed and reliability of their internet connection.

Those living alone cite significantly more barriers to using the internet than other households.

Those with children at home are less likely to mention not knowing how to use the internet as a barrier to using the internet more often.

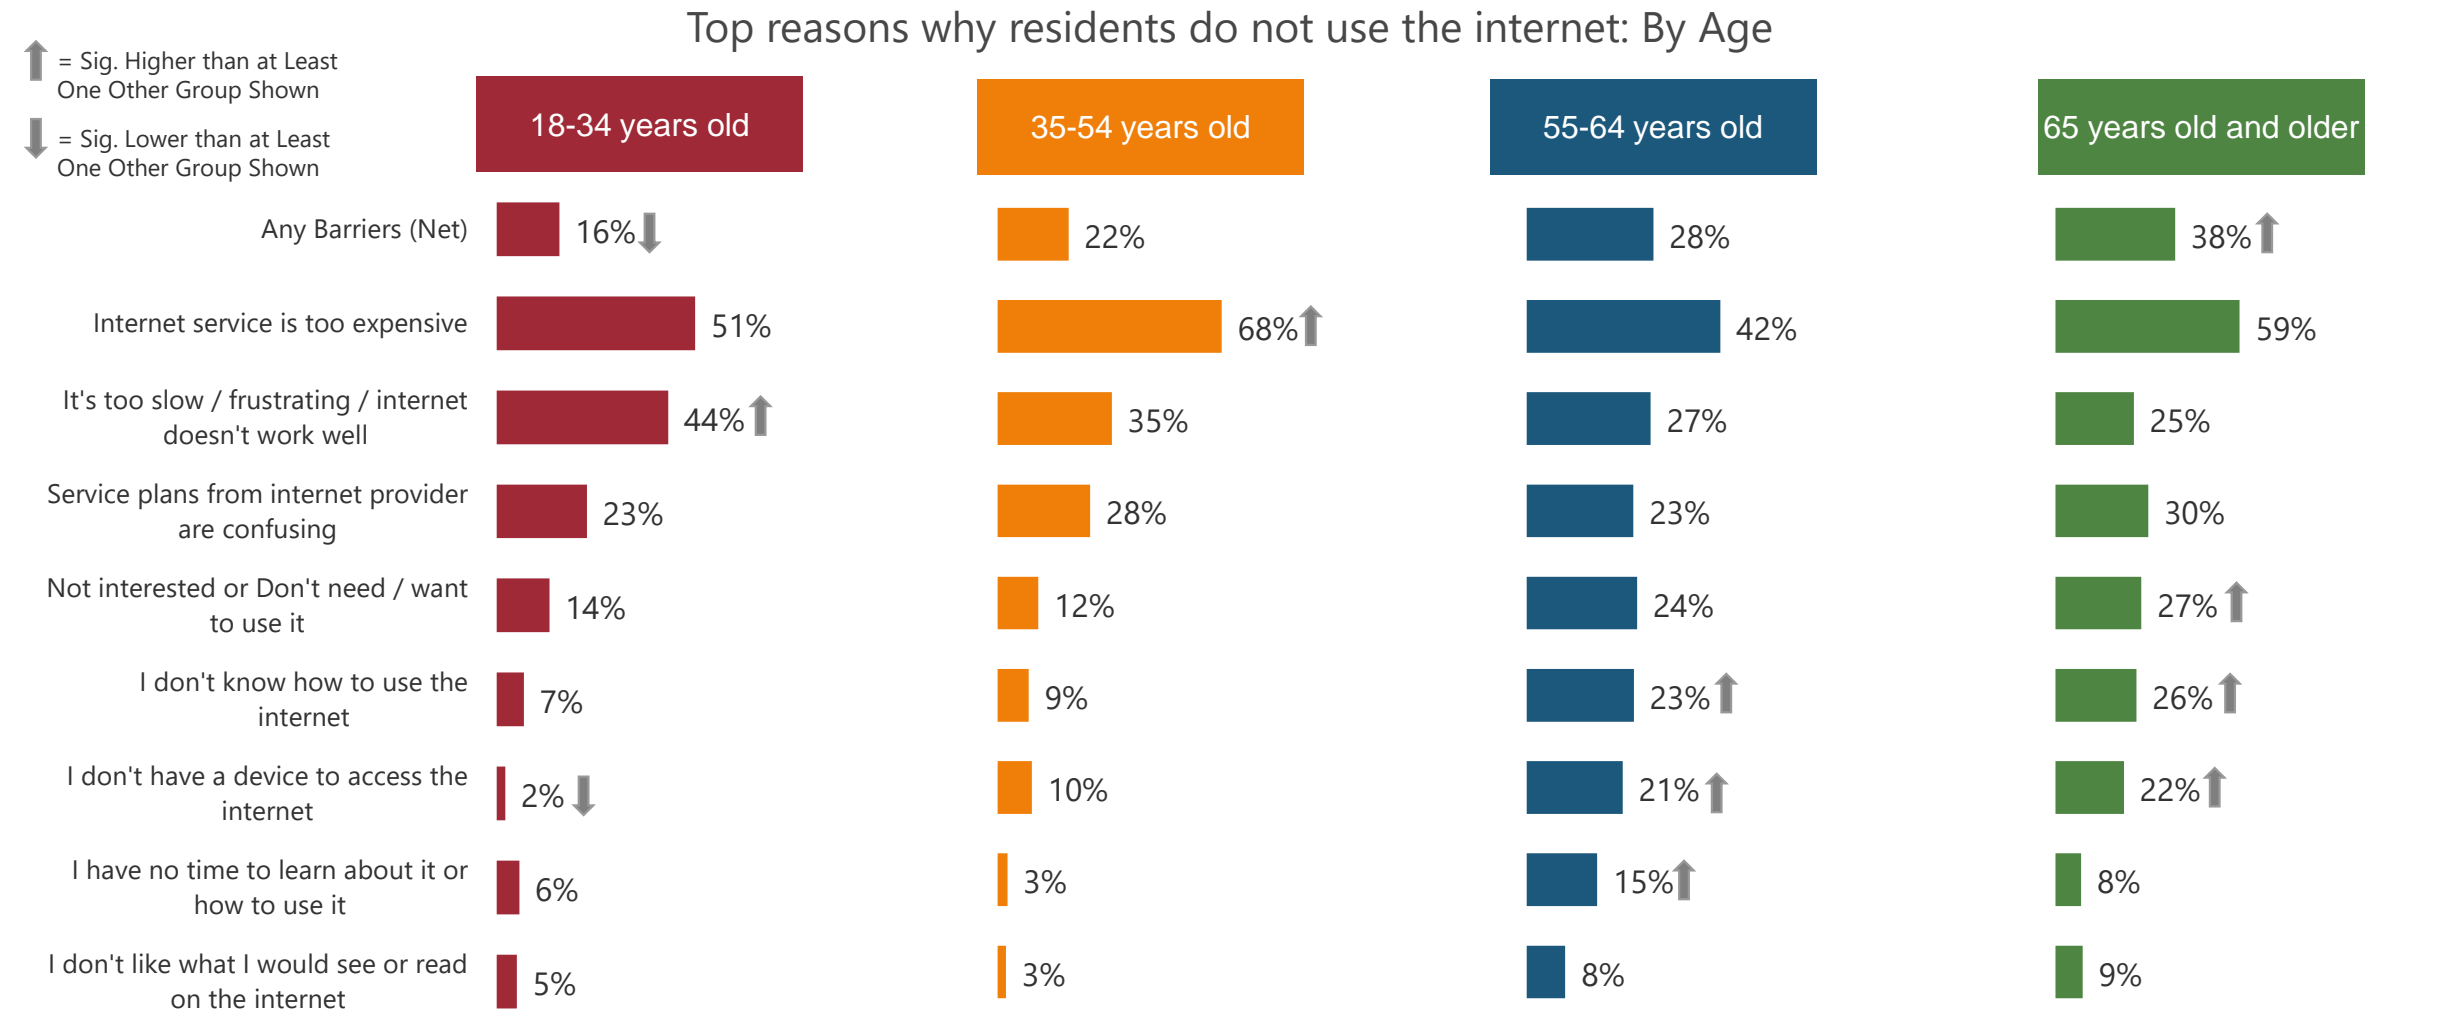

Top reasons why residents do not use the internet: By Household Size

Base: Total Answering: Total/Have Any Barriers – Total (n4095/n895), Living Alone (n1062/n319), Two or More Adults in HH Only (n1111/n233), Child in HH (n1404/n237). Individual Weight.
Q13 - Please check the box next to all the reasons why you do not use the internet more.

Older adults have more barriers to increased internet use.

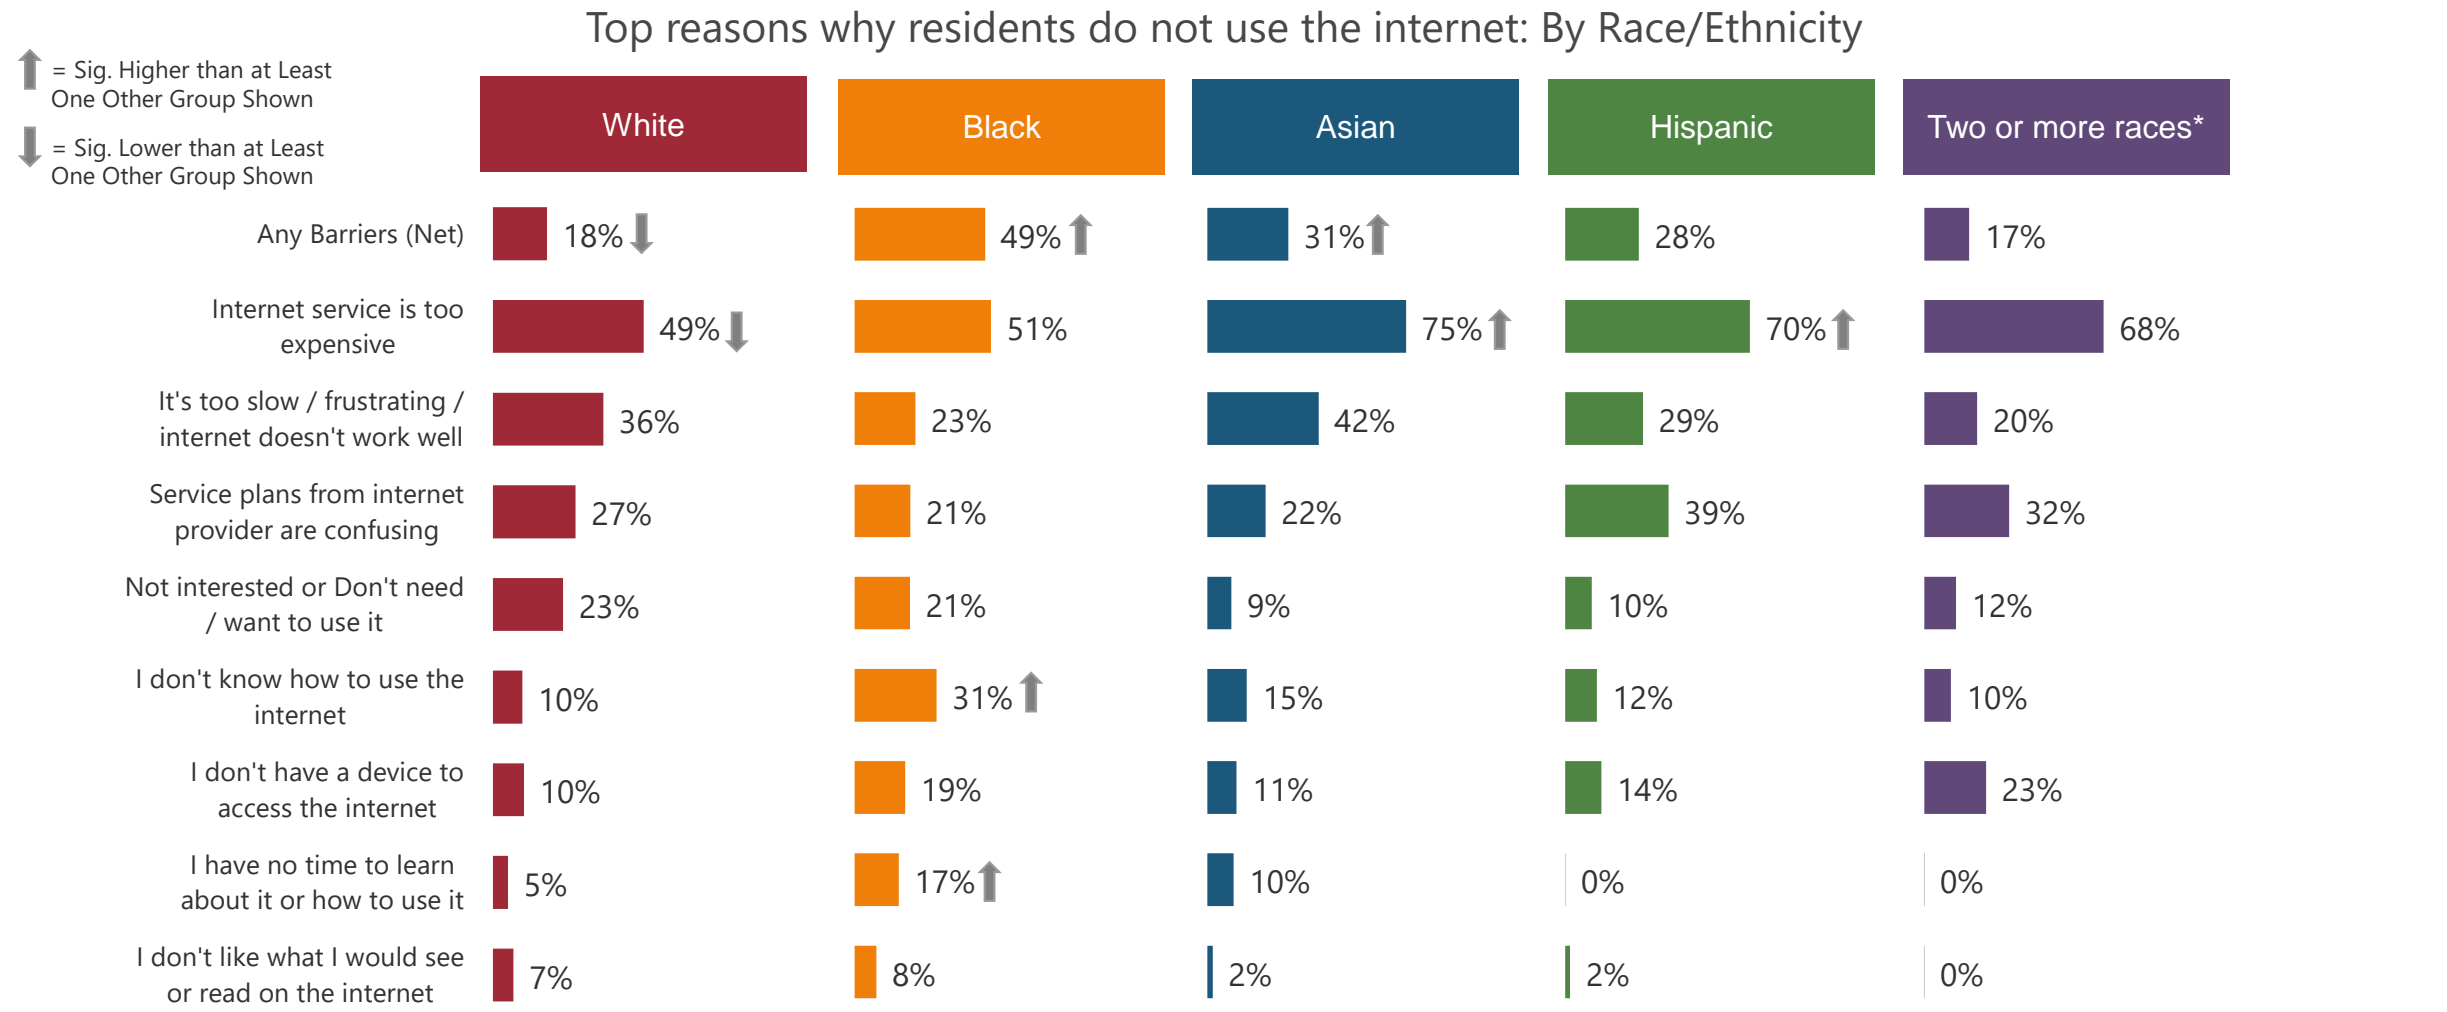

The cost of the internet service is the most common reason for not using the internet more among those who are 65 years old and older. This group also mentions lack of interest and skills to use the internet.

Base: Total Answering: Total/Have Any Barriers – 18-34 years old (n618/n95), 35-54 years old (n1475/n248), 55-64 years old (n612/n138), 65 years and older (n814/n241). Individual Weight.
Q13 - The City would like to understand reasons why residents do not use the internet. Please check the box next to all the reasons why you do not use the internet more.

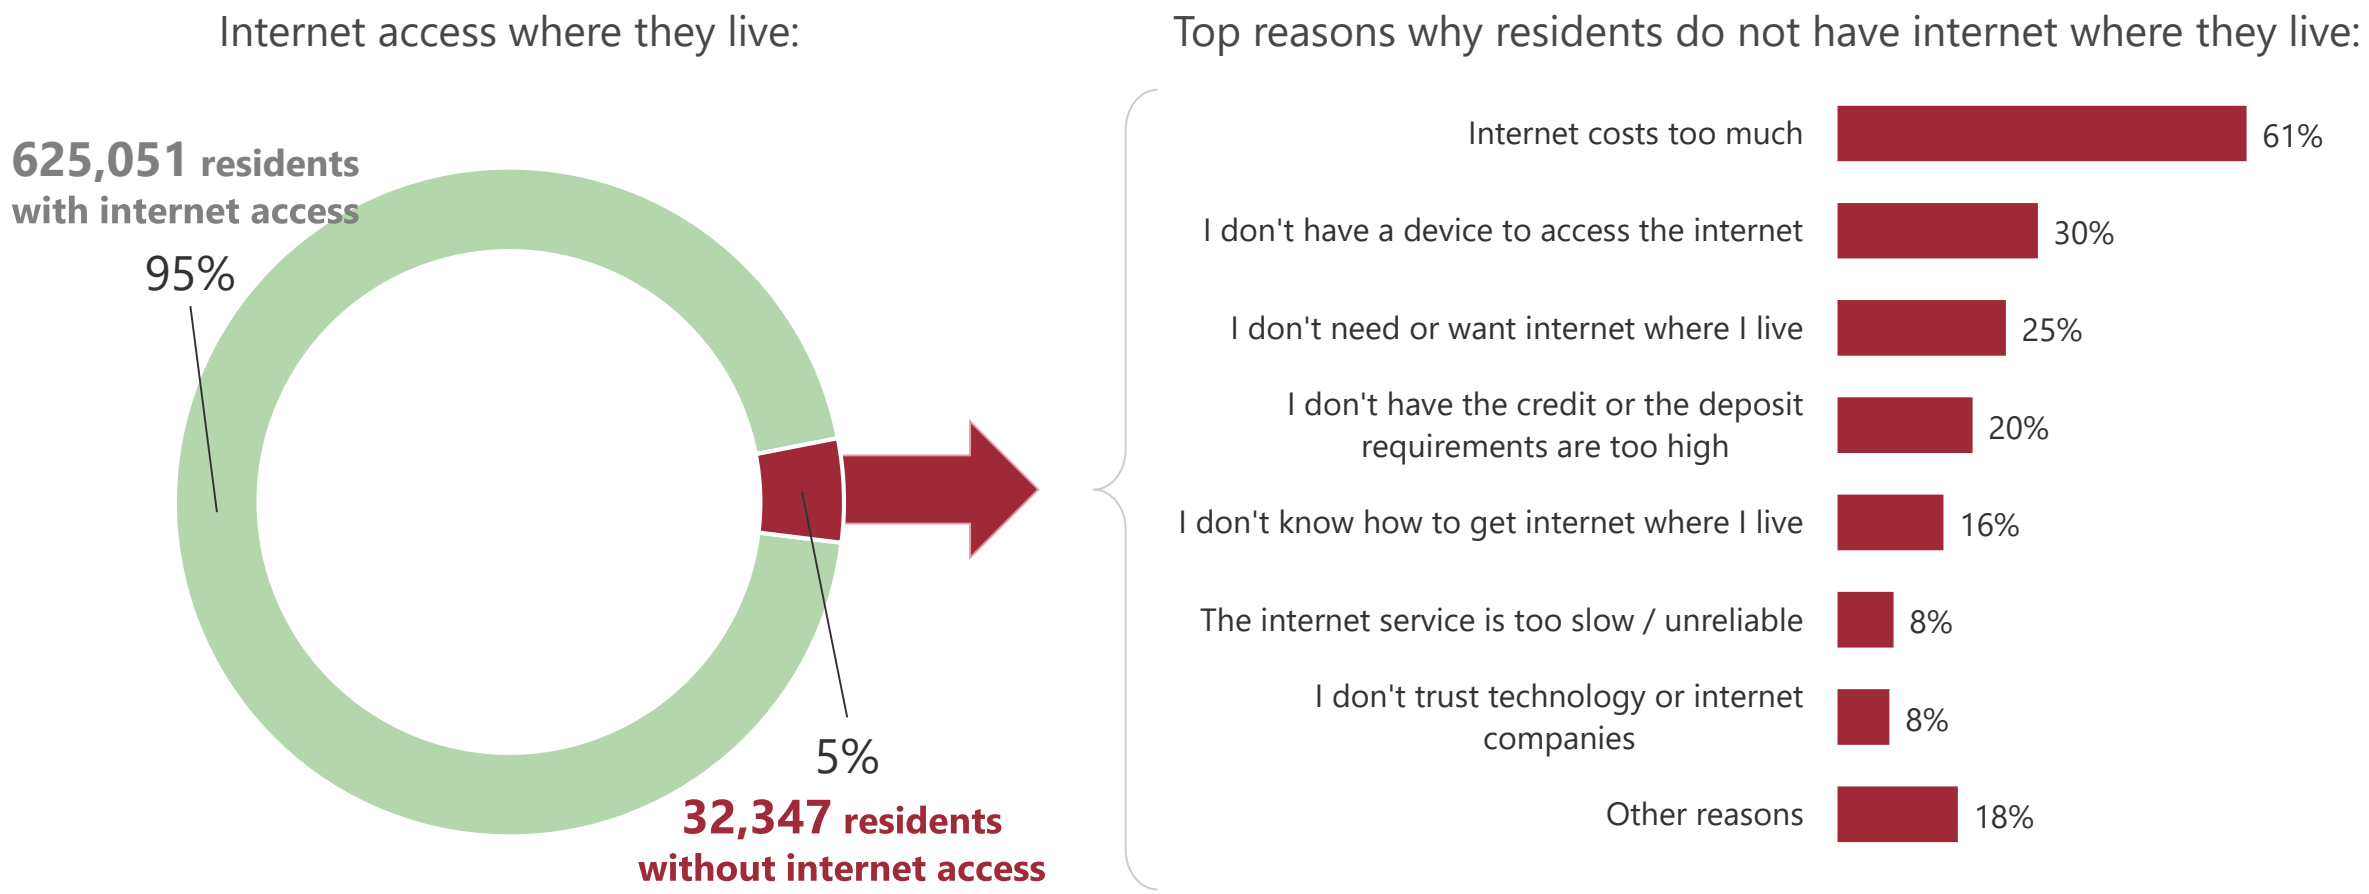

Black and Asian residents are the most likely racial groups to report barriers to using the internet more often.

Internet cost is the most commonly mentioned barrier, though Black residents are also significantly more likely to mention not knowing how to use the internet and not have time to learn about it.

Cost of internet is the primary reason why residents do not have internet in their homes. Not having a device is also a common factor.

On the other hand, one out of four residents who do not have internet in their home report that they choose not to have internet.

Base: Total Answering (n4315). Household Weight.
Q1 - Does your household have a way to access the internet in the place where you currently live?
Base: Total Answering (n188). Individual Weight.
Q15 - If you do not have internet where you live, please tell us why.

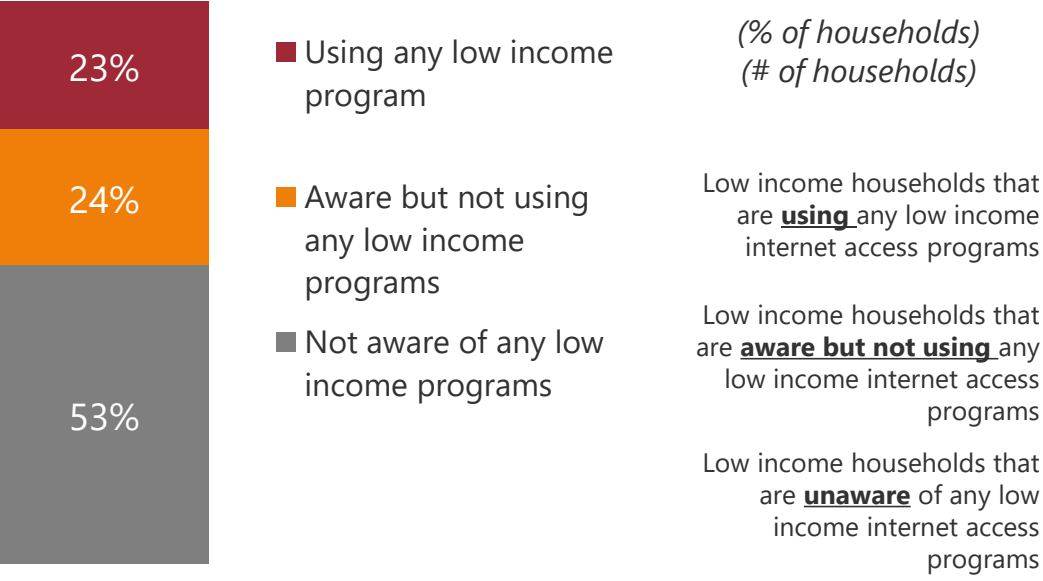

Over half of low-income residents are not aware of available lower-cost internet programs.

Additionally, even among those who are aware, many are not using any of these programs even though all would qualify given their living situation at or below the federal poverty level.

More information about the low-income internet access programs offered in the City of Seattle can be found at: <https://www.seattle.gov/tech/services/internet-access>.

Awareness and Usage of Low Income Internet Access Programs

Base: Low Income – Total (n412), Household Member with a Disability (n144), Children in Household (n106), Older Adults (n109), Primary Language Other than English (n77), Insecurely Housed (n41*). Household Weight. *Limited sample size. Sub-segment analysis warrants further research and/or a large sample size.
Q1 - Does your household have a way to access the internet in the place where you currently live?
Q12 - Please tell us if you know about and / or currently use the following lower cost internet services for qualified low-income households.

Digital Activities & Skills

- Online Activity Levels
- Reliance on Others to Help with Access and Navigation of the Internet
- Digital Skills Levels

The frequency in which a variety of online activities is performed was used to create a summary metric that measures the households' overall level of online engagement.

Research respondents were asked how often any member of their household engages in each of the twenty two (22) online activities listed below.

Go online and get information from or about local government
Access or apply for benefits (Medicare, VA, social security, etc.) online
Do schoolwork or online research for school
Read or send email
Research and buy a product online
Use online banking services or pay bills online
Create or post original media (writing, art, music, videos) online
Listen to music or radio online
Watch videos or TV online
Access social media (Facebook, Twitter, LinkedIn, Instagram, etc.)
Get health or medical information online

On each of these activities, they indicated if any household member performs each activity : **Daily, Weekly, Monthly, Less Often, or Never.**

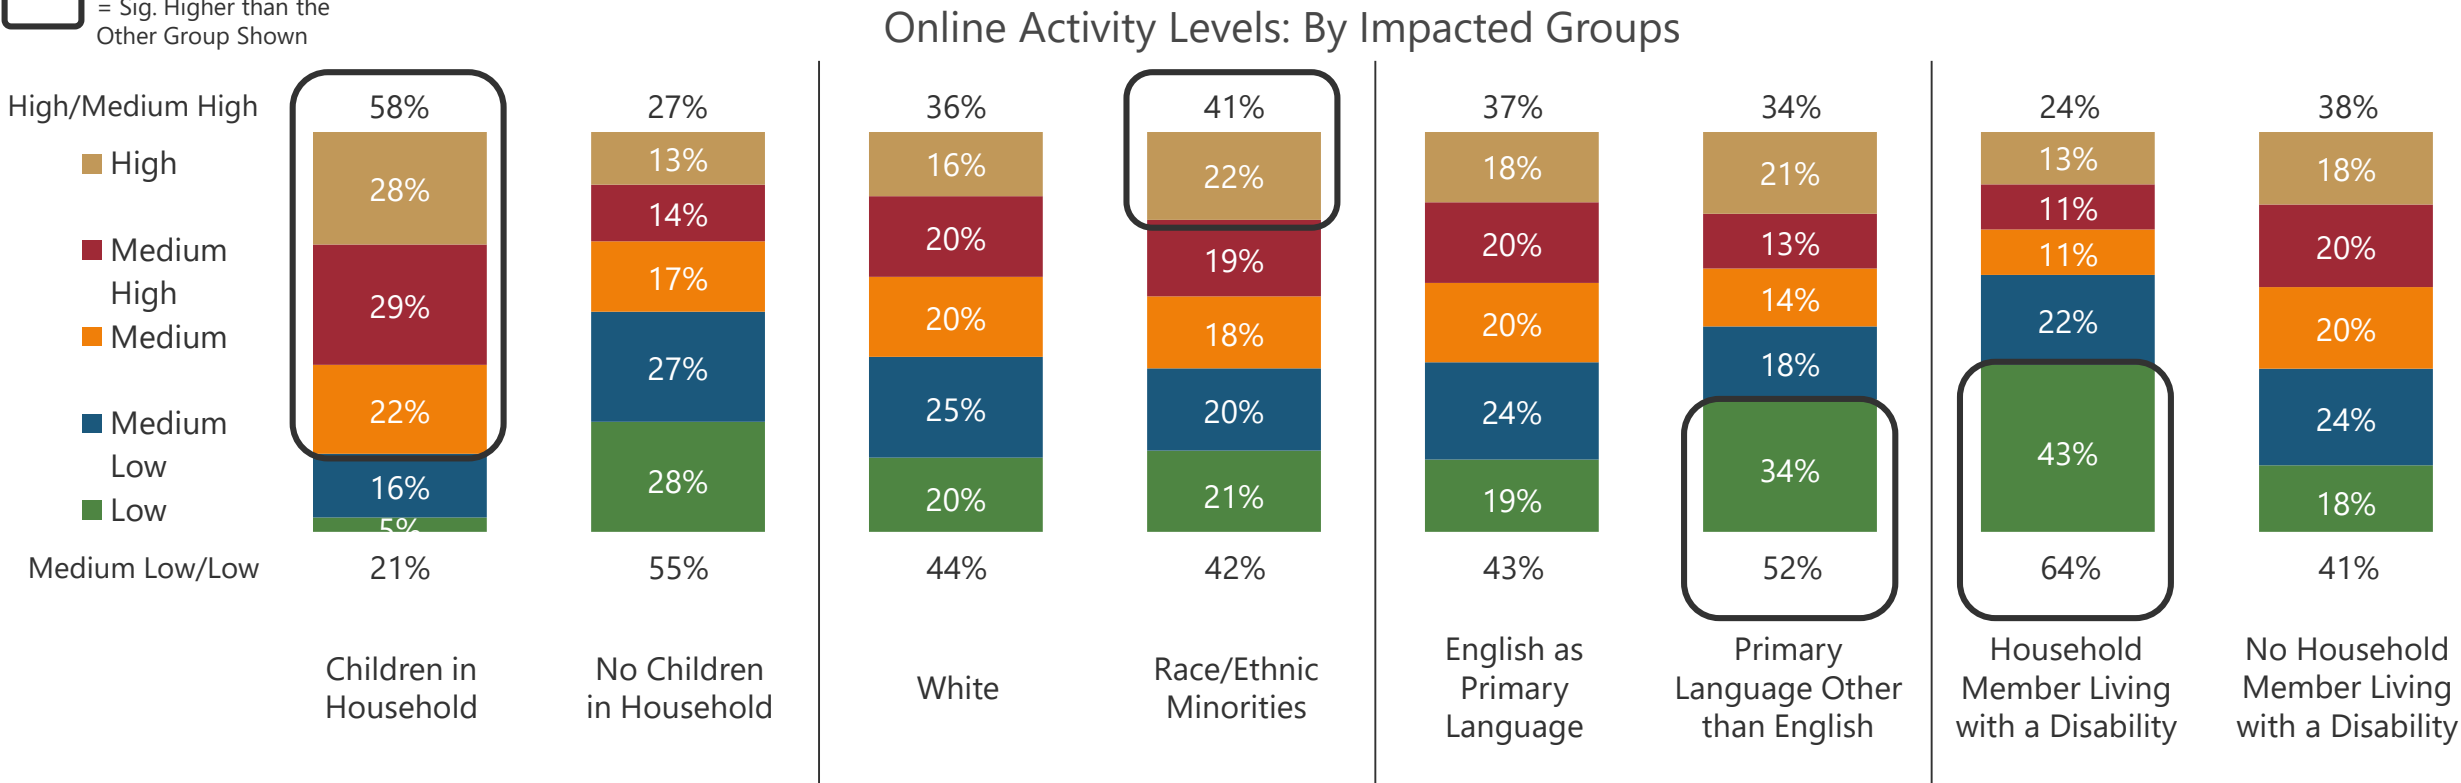

Look for or apply for a job online
Attend an online class, meeting, or webinar
Find legal or consumer rights information online
Stay in touch with friends or family online
Look for answers to computer problems online
Use the internet to work from home
Start or run a business online
Arrange transportation online (check bus schedule, get transportation, order a ride)
Online search for homes / rentals
Research a new skill online
Learning language (programs or watching videos) online

- 1 A numeric score from 0 to 5 was given to each of the online task responses, depending on their level of engagement (e.g. Daily equals 5 and Never equals 0).
- 2 Individual scores for each tasks were summed to create a total score for each household responding to the survey. This score represents the households' total level of digital engagement.
- 3 All scores were tabulated and sorted from high to low into five independent groups (**High, Medium High, Medium, Medium Low, and Low**).

Households with children and residents that are part of racial or ethnic minorities are more likely to have a higher degree of online activities, compared to each of their contrasting groups (no children and white residents).

On the other hand, those who primarily speak a language other than English and those living with a disability or have a household member with a disability are more likely than their counterparts to have lower online activity levels.

 = Sig. Higher than the Other Group Shown

Specific Race/Ethnic Comparison: Asian (43%), Hispanic (47%) and Mixed race (47%) residents are significantly more likely to have higher online activity levels compared to White (36%) and Black residents (23%). Three out of five Black residents (60%) indicate having a lower level of online activity, significantly more than any other race/ethnic group.

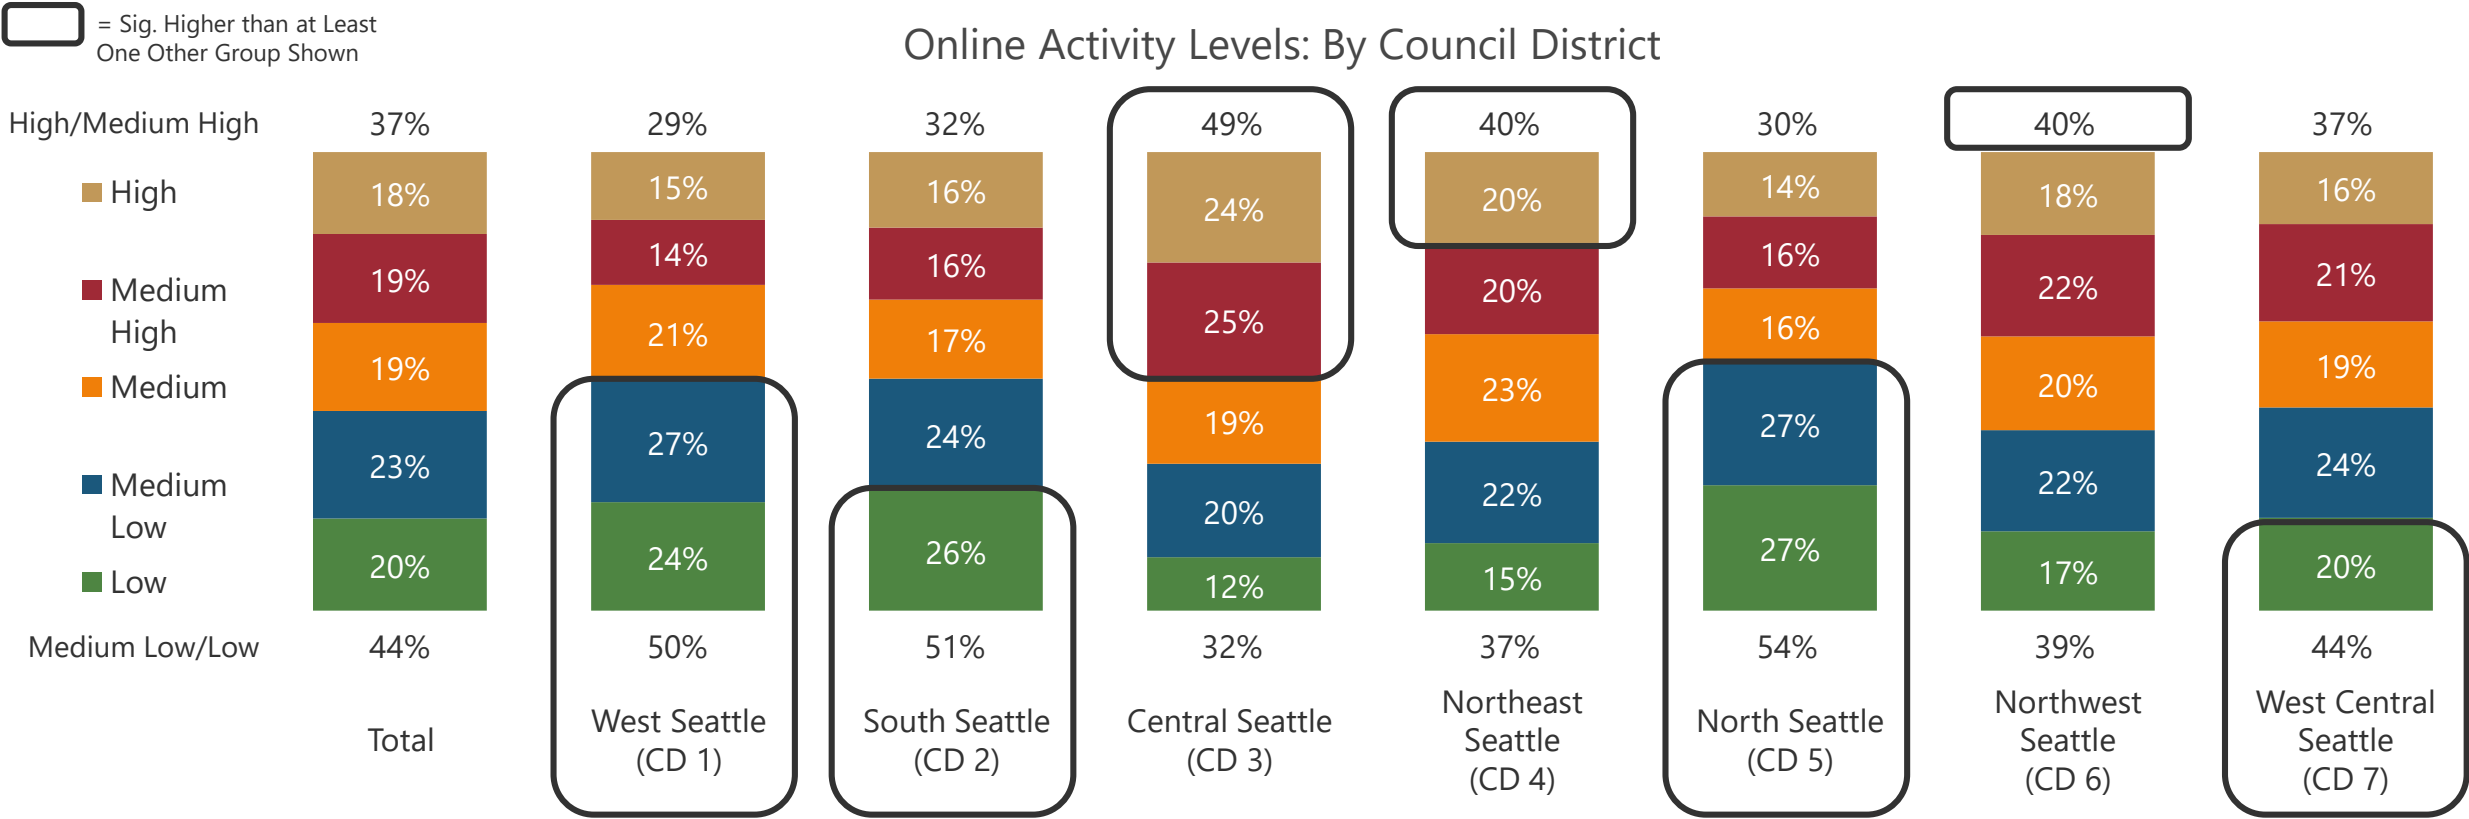

Base: Total Answering (n4269), By Impacted Group – Children in HH (n1450), No Children in HH (n2249), White (n3057), Race/Ethnic Minority (n911), English as Primary Language (n3951), Primary Language Other than English (n234), Household Member Living with a Disability (n425), No Household Member Living with a Disability (n3825). Household Weight.
Q16 - How often does anyone in your household engage in the following activities online?

Older residents and households living in Seattle Housing Authority (SHA) properties are more likely to have a lower online activity level, when compared to their counterparts.

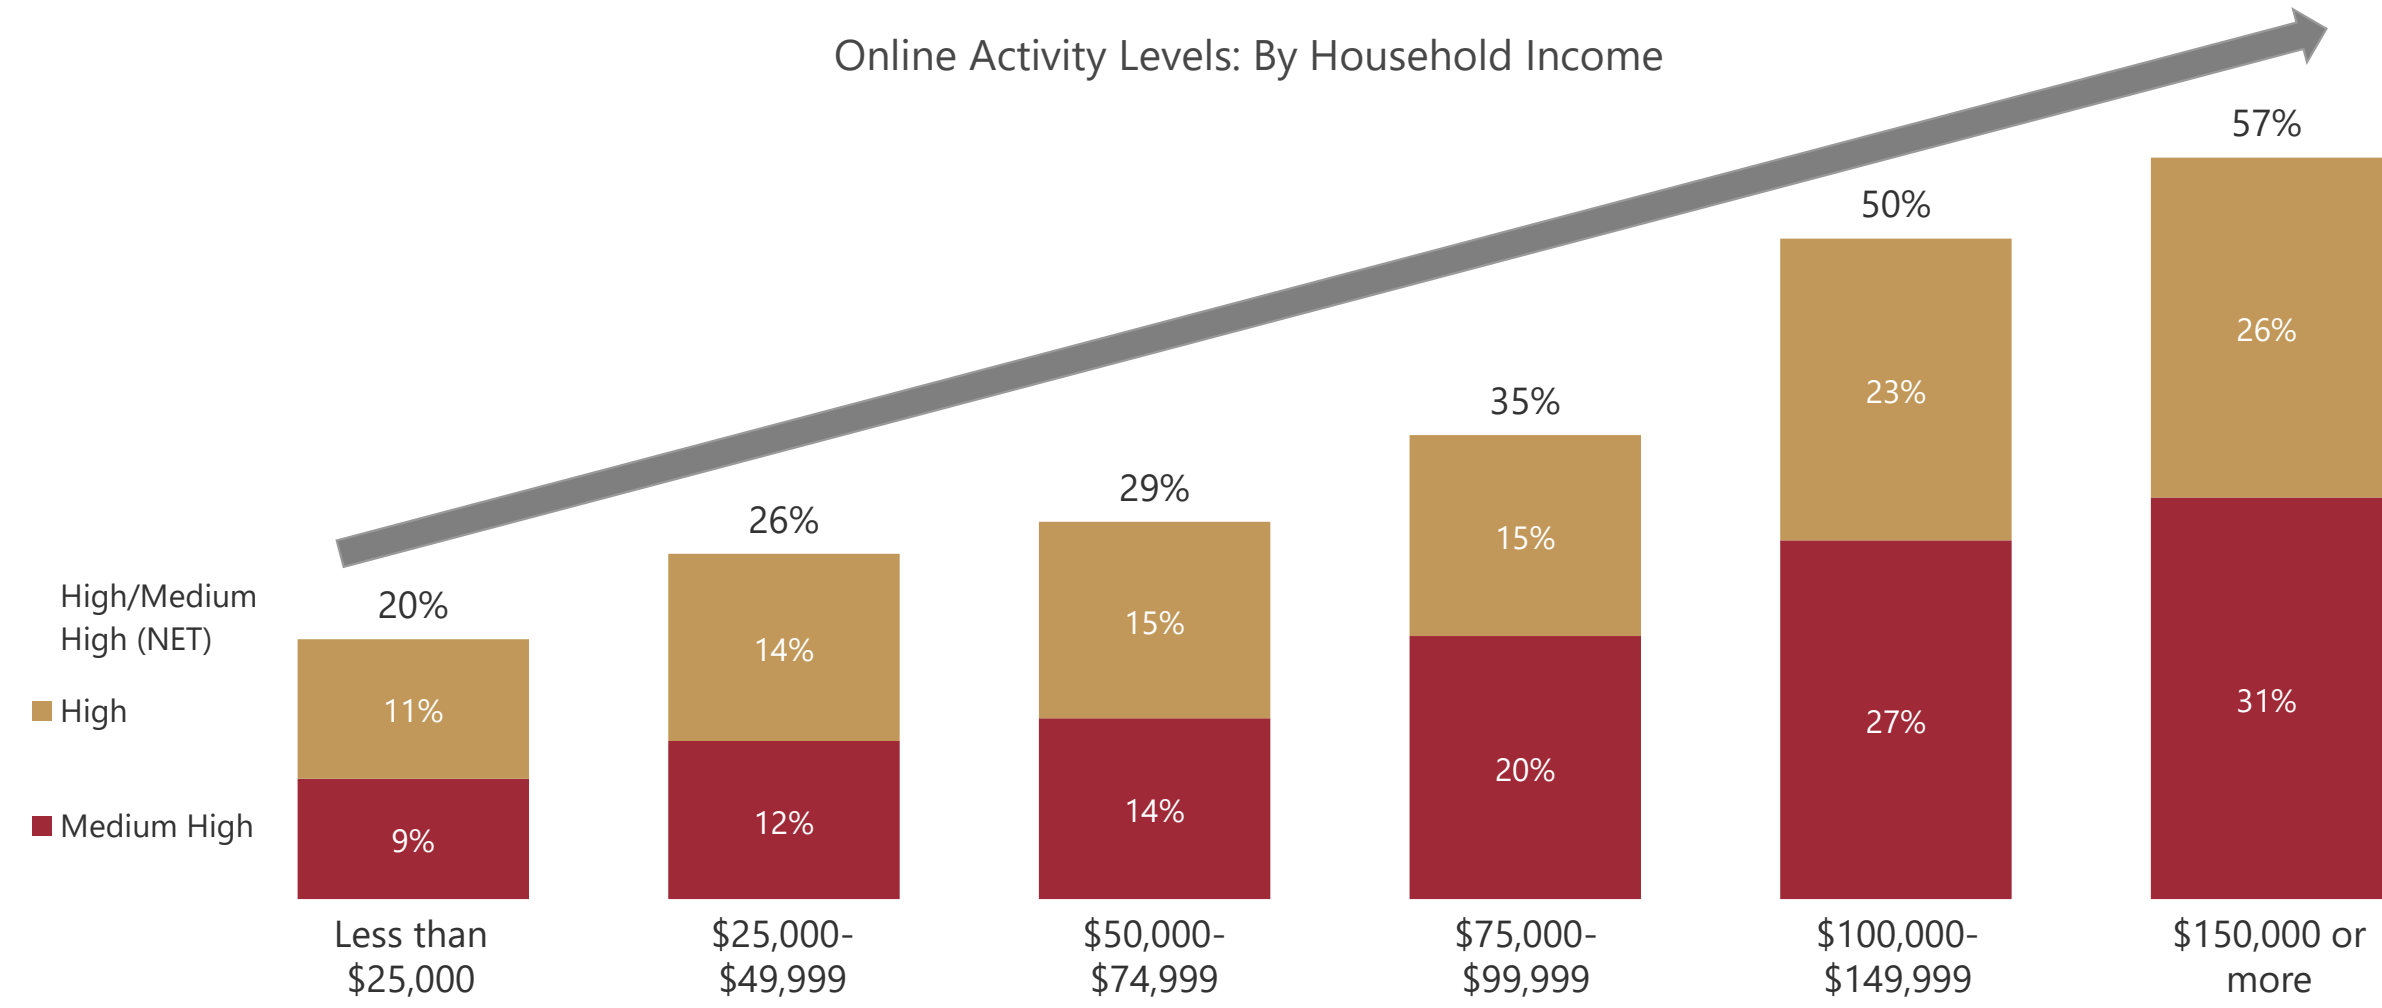

Base: Total Answering (n4269), By Impacted Group – Insecurely Housed (n56*), Living in SHA Building (n260), Living in MDU (n1527), Living in Single Family Home (n2463), Younger Adults (n2767), Older Adults (n865).
Household Weight. *Limited sample size. Sub-segment analysis warrants further research and/or a large sample size.
Q16 - How often does anyone in your household engage in the following activities online?

Central Seattle households (CD 3) stand apart for having residents with the highest online activity levels, while West, South, North, West Central Seattle households (CDs 1, 2, 5, and 7) have residents with significantly lower activity levels.

Base: Total Answering (n4269), By Council District – CD1 (n628), CD2 (n602), CD3 (n517), CD4 (n579), CD5 (n767), CD6 (n641), CD7 (n471). Household Weight.
Q16 - How often does anyone in your household engage in the following activities online?

There is a direct correlation between income and online activity. The greater the income, the more online activities are done on a regular basis.

The majority of residents have the skills required to independently access and use the internet.

However, more than one out of ten (13%) residents rely on someone else to help them access or navigate the internet.

Reliance on Others to Help with Access and Navigation of the Internet: By Total Population

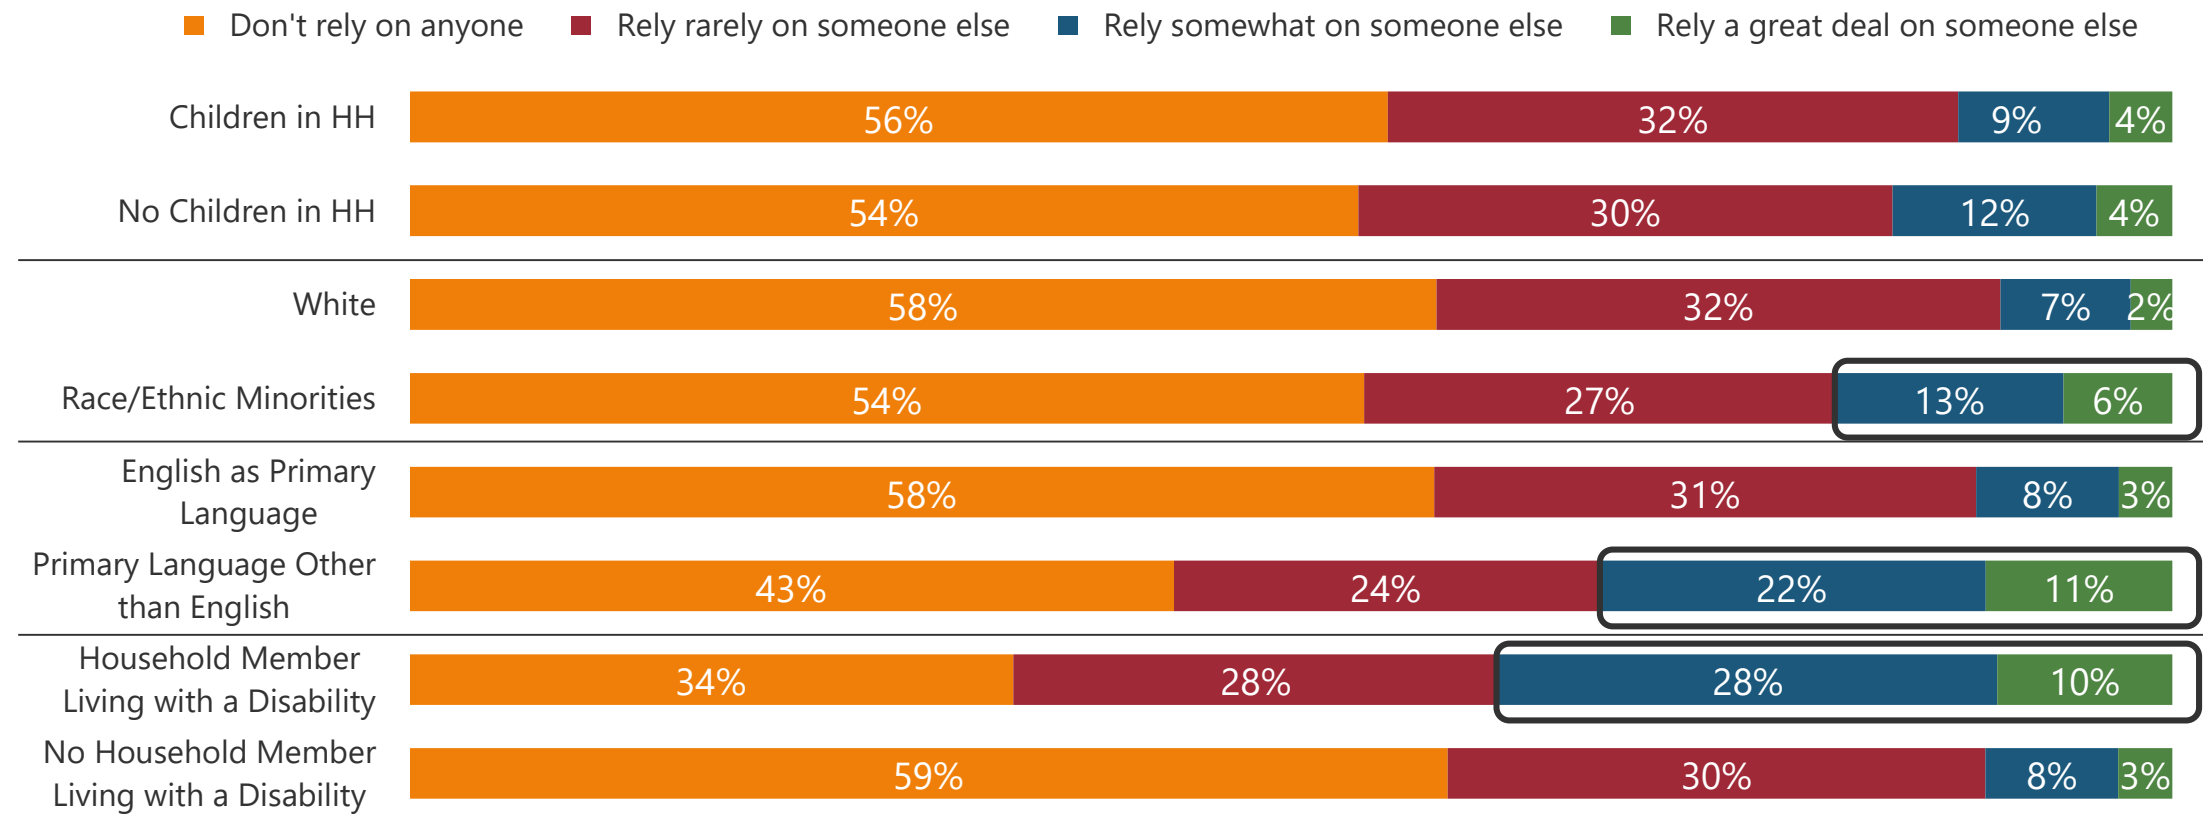

Don't rely on anyone Rely rarely on someone else Rely somewhat on someone else Rely a great deal on someone else

Residents that are part of race and/or ethnic minorities, those who primarily speak a language other than English, and those where a member of the household (HH) is living with a disability are more likely than their contrasting groups to rely on others to help them access and use the internet.

 = Sig. Higher than the Other Group Shown

Reliance on Others to Help with Access and Navigation of the Internet: By Impacted Groups

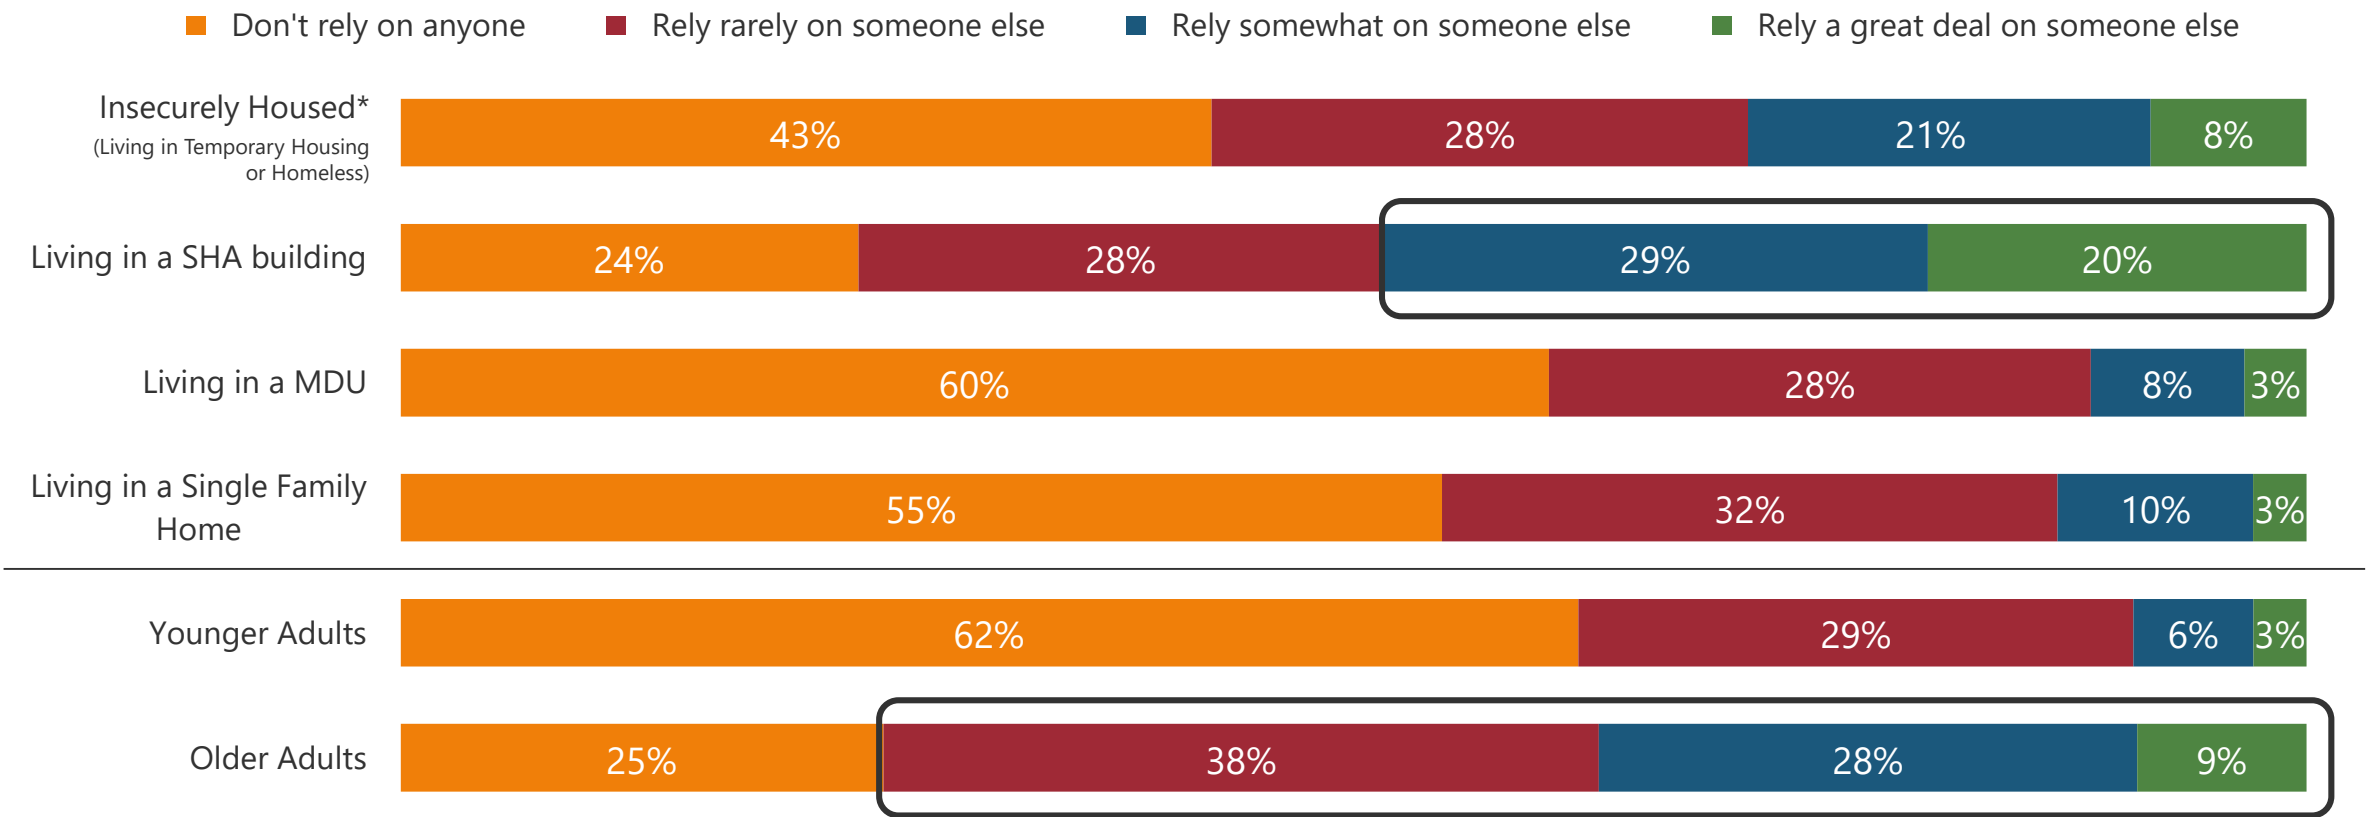

Race/Ethnic Comparison: Hispanic residents are significantly more likely to be self-reliant in using the internet, compared to White, Black, and Asian residents (70%, vs 58%, 38%, 50%). Black residents are the most likely to rely on someone else to access the internet, compared to White, Asian, Hispanic, and Mixed race residents (34%, vs 10%, 20%, 8%, 12%).

Base: Total Answering (n4166), By Impacted Group – Children in HH (n1437), No Children in HH (n2161), White (n3018), Race/Ethnic Minority (n867), English as Primary Language (n3884), Primary Language Other than English (n209), Household Member Living with a Disability (n387), No Household Member Living with a Disability (n3762). Individual Weight.
Q18 - How much do you rely on others to help you with the skills needed to access and navigate the internet?

Those living in Seattle Housing Authority (SHA) properties, as well as older residents, are more likely than their counterparts to rely on others to access and navigate the internet.

 = Sig. Higher than at Least One Other Group Shown

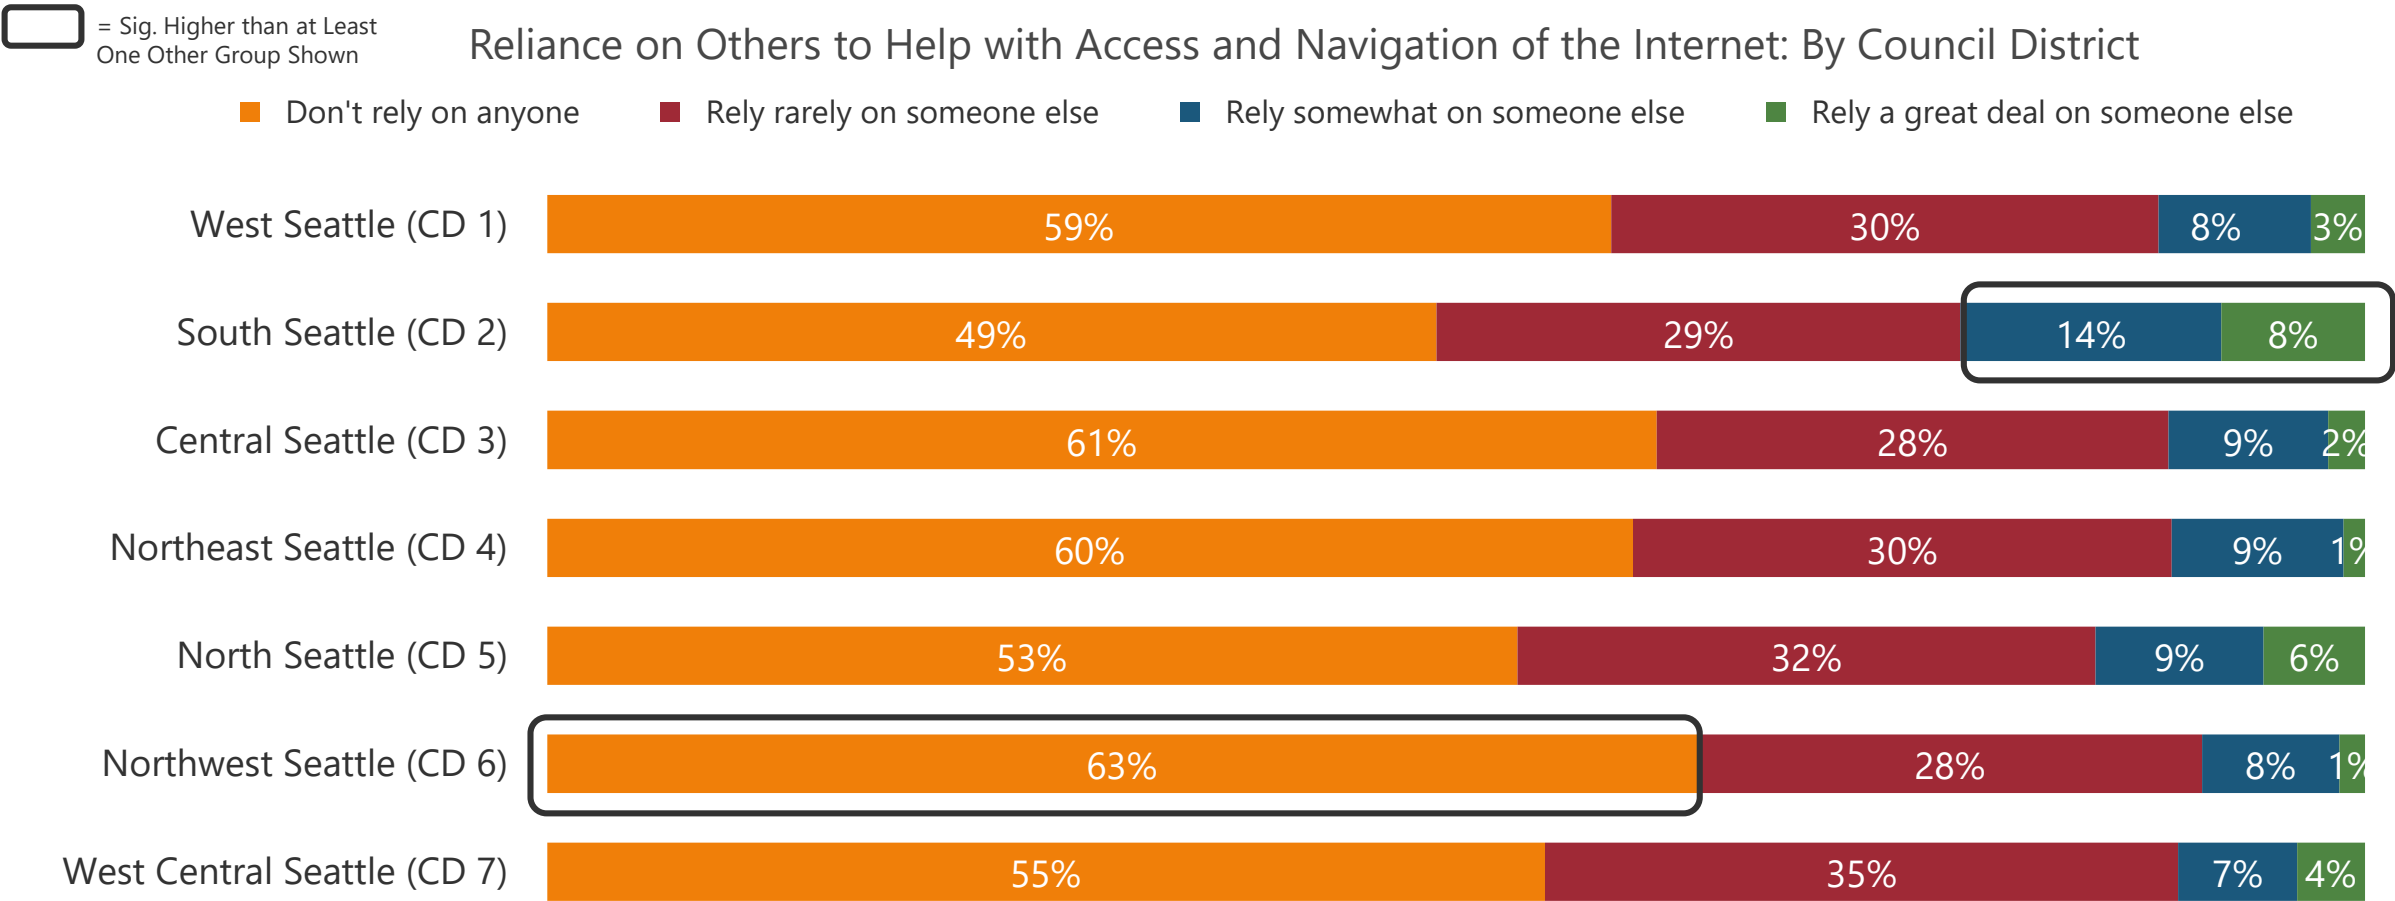

Reliance on Others to Help with Access and Navigation of the Internet: By Impacted Groups (cont'd.)

Base: Total Answering (n4166), By Impacted Group – Insecurely Housed (n51*), Living in SHA Building (n227), Living in MDU (n1488), Living in Single Family Home (n2424), Younger Adults (n2744), Older Adults (n823). Individual Weight. *Limited sample size. Sub-segment analysis warrants further research and/or a large sample size.
Q18 - How much do you rely on others to help you with the skills needed to access and navigate the internet?

Those in South Seattle (CD 2) are almost twice as likely as those in other areas to need assistance in accessing or using the internet.

Residents of Northwest Seattle (CD 6) are the most likely to say they do not rely on anyone.

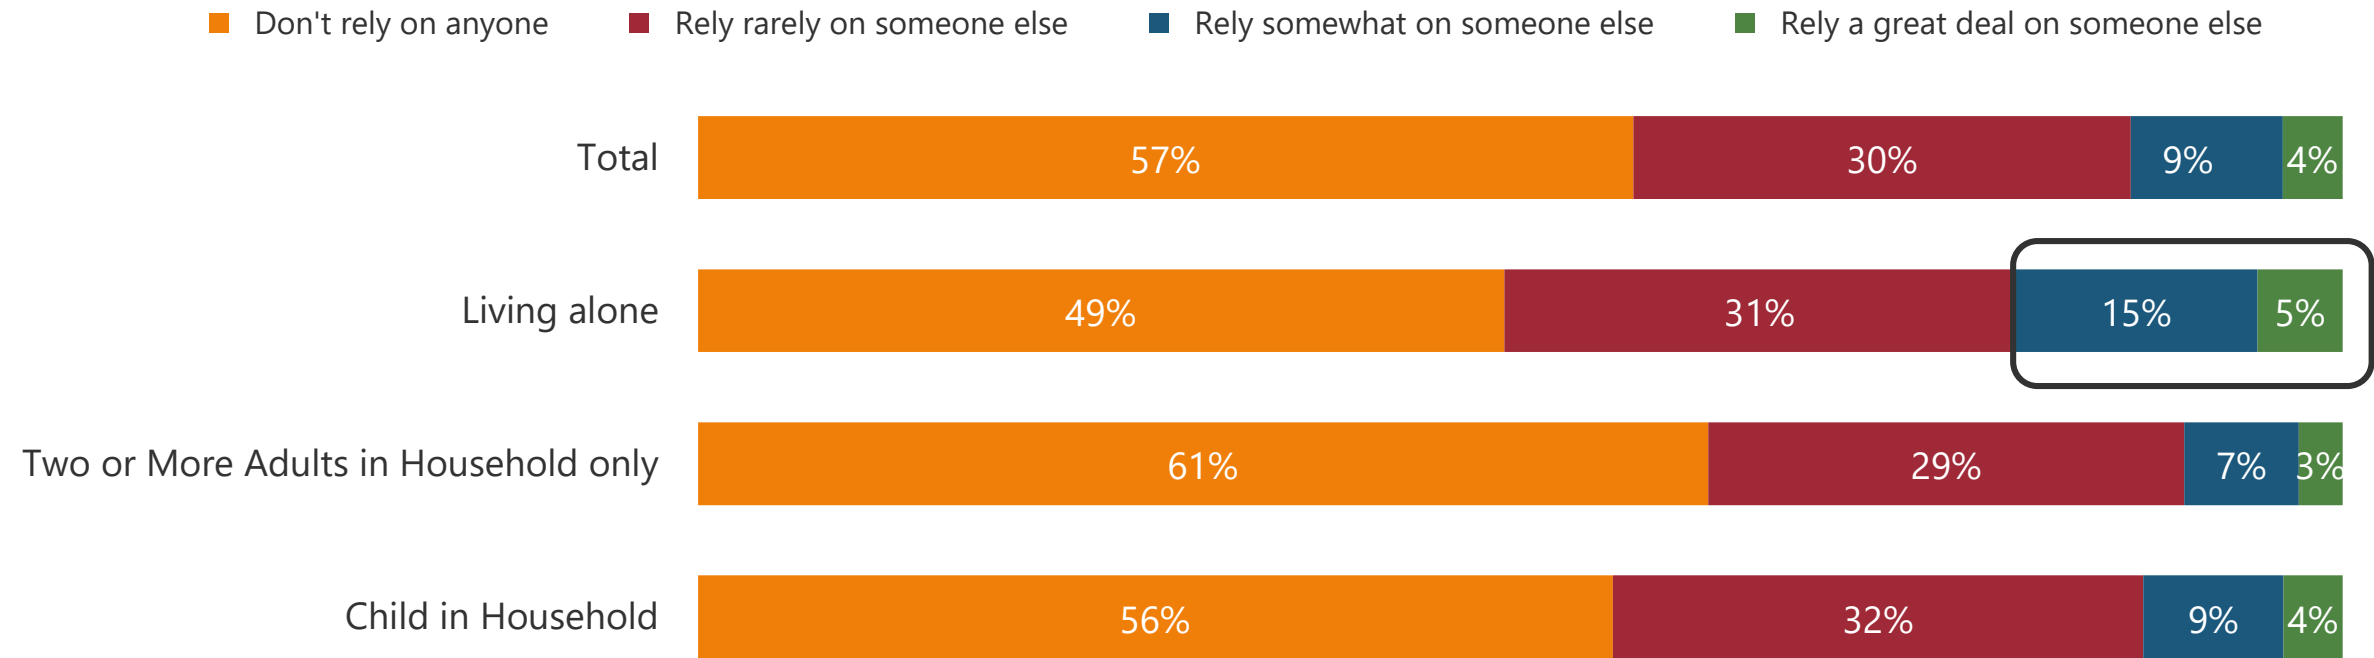

The reliance on others for help accessing and navigating the internet is more pronounced among those who live alone.

Unfortunately, this means for those where self-reliance is limited, there are also fewer ready “resources” to help accomplish online tasks.

 = Sig. Higher than at Least One Other Group Shown

Reliance on Others to Help with Access and Navigation of the Internet: By Housing Size

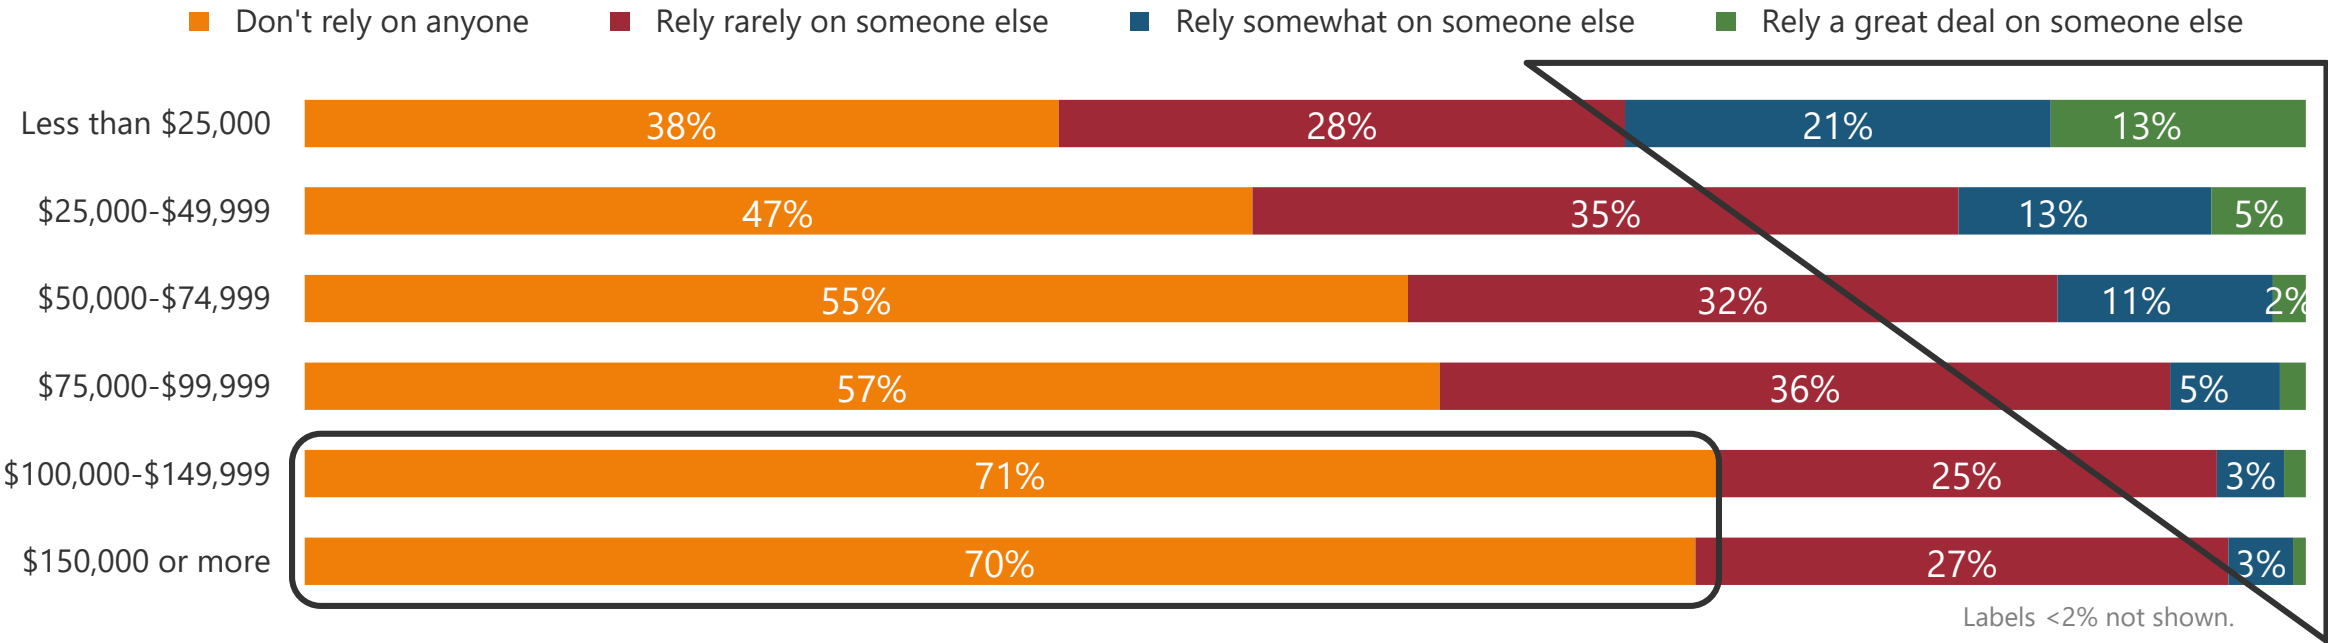

Residents with more household income are less likely to need assistance to access and navigate the internet.

Only one third (38%) of respondents with less than \$25,000 in household income are able to use the internet independently and are significantly more likely than any other income group to need a “great deal” of help from someone else to access and navigate the internet.

 = Sig. Higher than at Least One Other Group Shown

Reliance on Others to Help with Access and Navigation of the Internet: By Income

Values below 2% not shown.

A summary metric (Digital Skills Index) was created to assess Seattle residents’ skill levels when it comes to performing online tasks (ranging from basic to more advanced tasks).

Research respondents were asked how comfortable they are in performing each of the twelve (12) online activities listed below.

Use a search engine to look for information online
Download / save a photo you found online
Find a website you have visited before
Send a personal message to another person via email, text message or online messaging service
Make comments and share information online
Buy items or services from a website

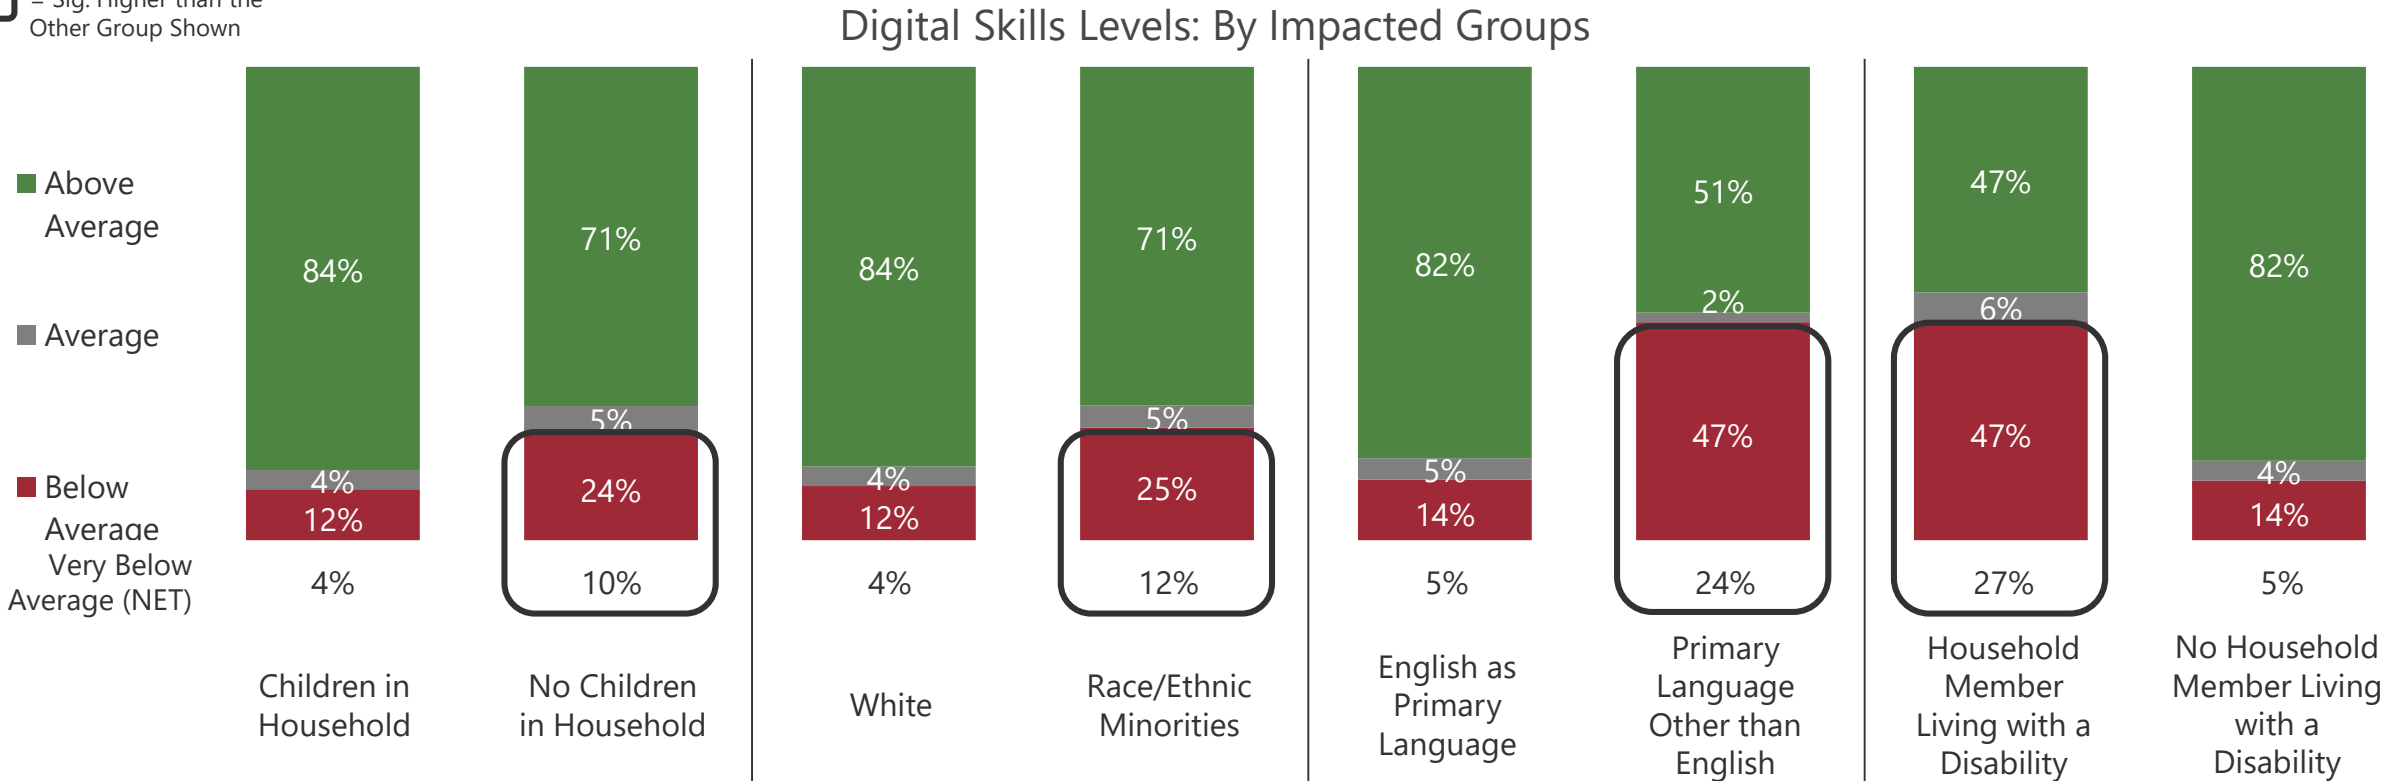

On each of these activities, they indicated if they personally **“could do this if asked to,”** “could NOT do this if asked to,” or “have no idea what is being asked.”

Buy and install apps on a device
Solve a problem you have with a device or digital service using online help
Verify sources of information you found online
Complete online application forms which include personal details
Create something new from existing online images, music or video
Send or open attachments

- 1 Responses for each task were tabulated and summed – so that a total number of digital tasks that could be performed was obtained for each individual respondent.
- 2 The average number of tasks that could be performed by Seattle residents is 10 (out of 12 possible). This average becomes the benchmark to which each individual respondent is compared.
- 3 Each respondent is divided into one of three groups – above average skill level, average skill level, and below average skill level.

Households without children, ethnic minorities, those who primarily speak a language other than English, and households impacted by a disability are more likely to have a lower level of digital skill than their counterparts.

 = Sig. Higher than the Other Group Shown

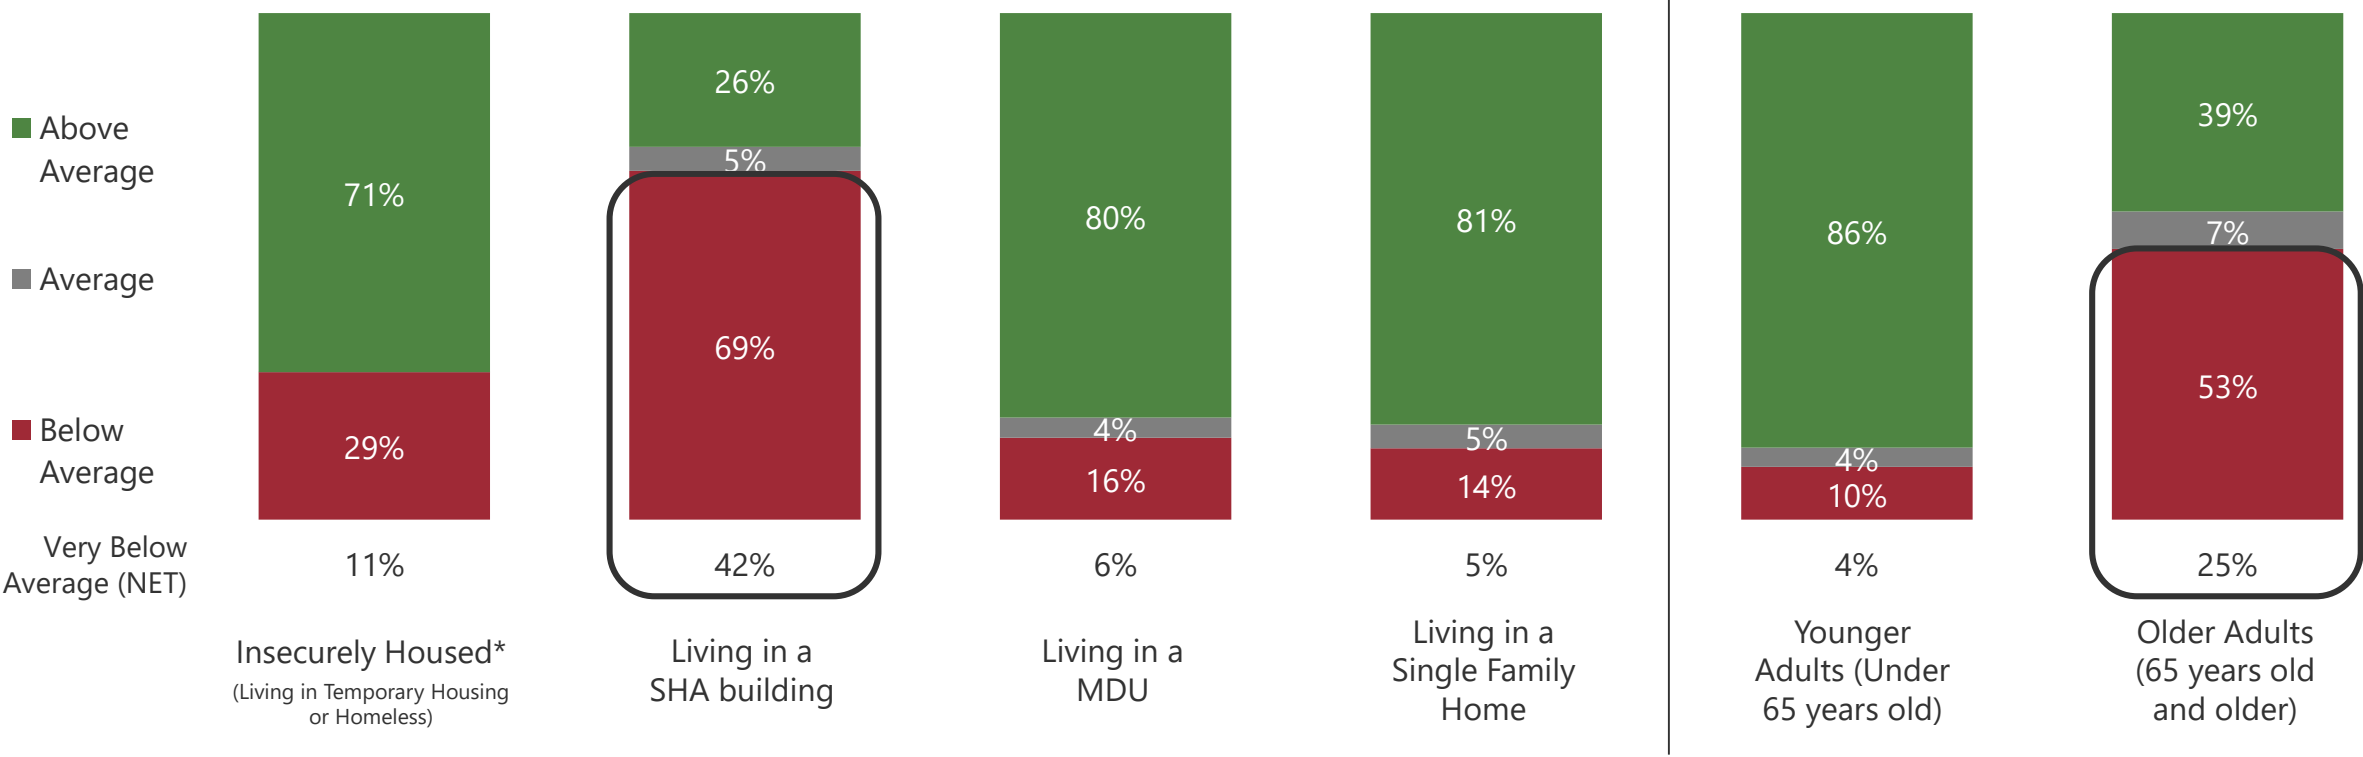

Race/Ethnic Comparison: Half of Black residents (49%) have below average online skills, this is significantly higher than all other race/ethnic groups including: White (12%), Asian (23%), Hispanic (13%), and Mixed race residents (9%).

Base: Total Answering (n4255), By Impacted Group – Children in HH (n1447), No Children in HH (n2238), White (n3052), Race/Ethnic Minority (n908), English as Primary Language (n3945), Primary Language Other than English (n231), Household Member Living with a Disability (n421), No Household Member Living with a Disability (n3815). Individual Weight.
 Q17 - How comfortable are you in performing the following activities online?

Older residents and households living within Seattle Housing Authority (SHA) properties are more likely to have a lower digital skill level, when compared to their contrasting groups (younger residents and other living situations).

 = Sig. Higher than at Least One Other Group Shown

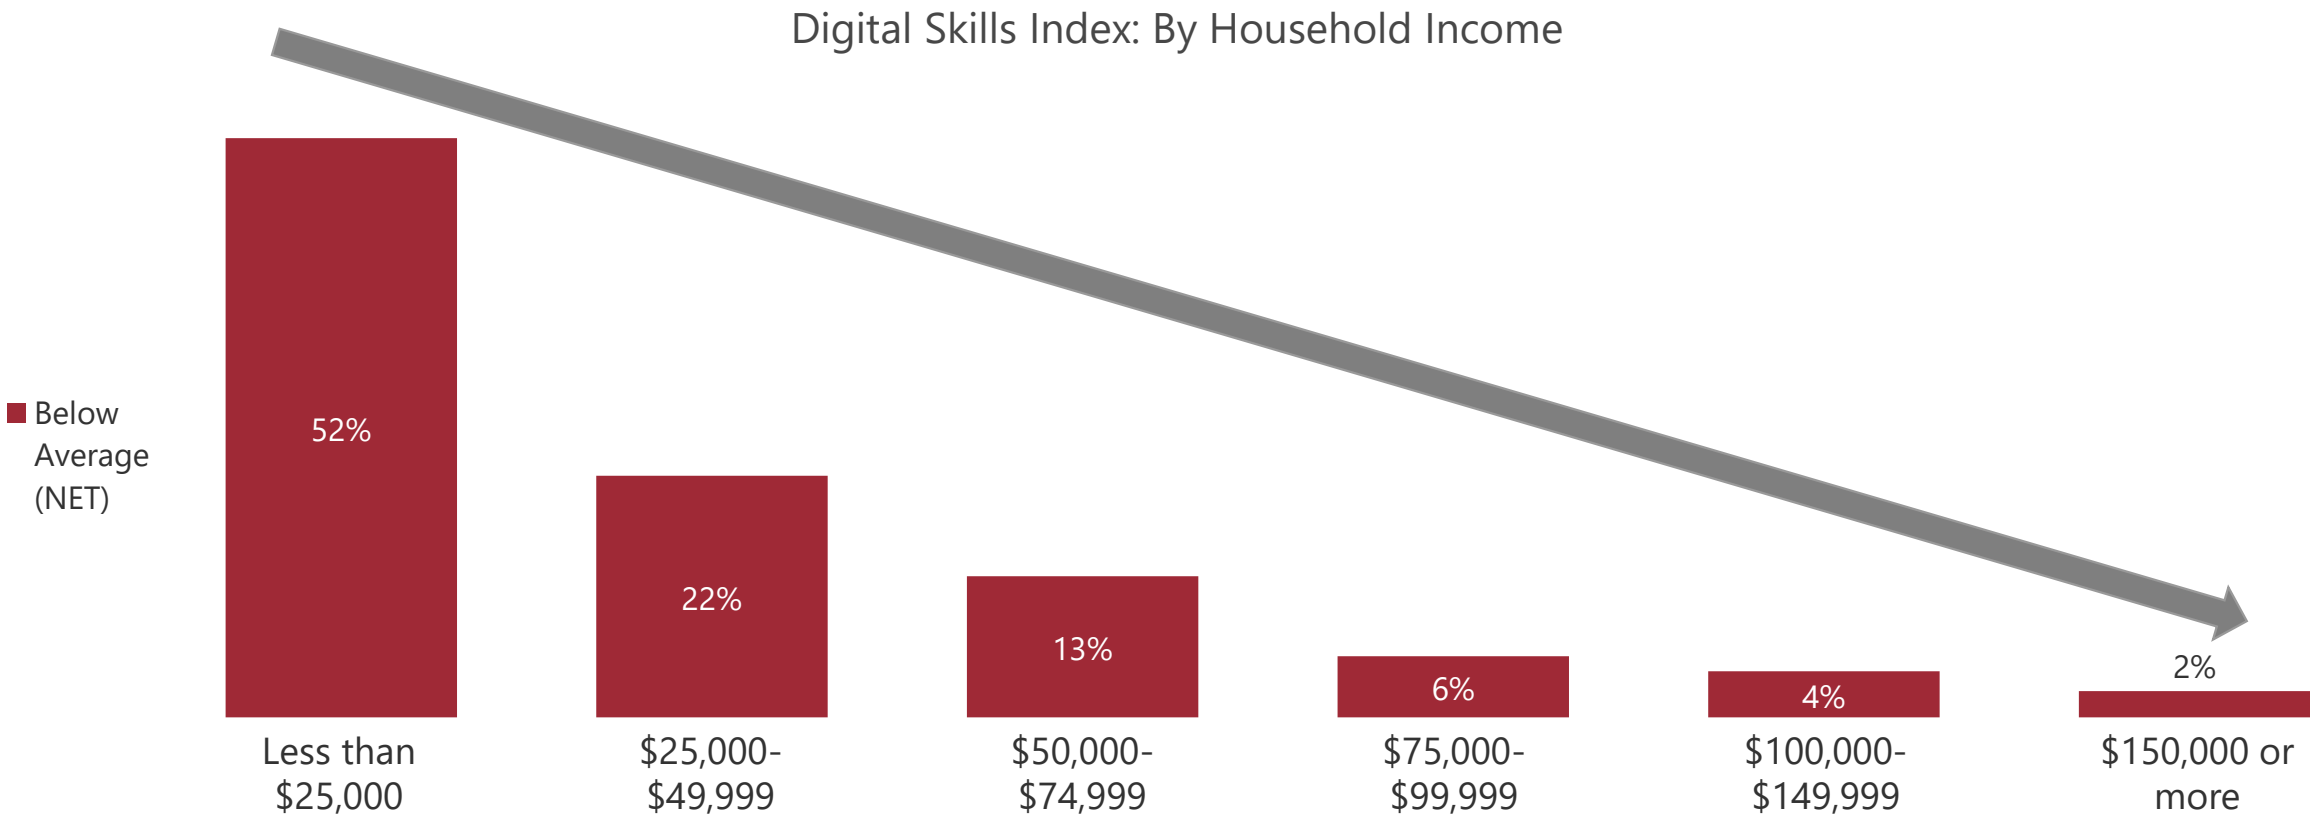

Digital Skills Levels: By Impacted Groups (cont'd.)

Base: Total Answering (n4255), By Impacted Group – Insecurely Housed (n51*), Living in SHA Building (n257), Living in MDU (n1522), Living in Single Family Home (n2461), Younger Adults (n2764), Older Adults (n860). Individual Weight. *Limited sample size. Sub-segment analysis warrants further research and/or a large sample size. Q17 - How comfortable are you in performing the following activities online?

Online skill level increases in step with household income – those with higher incomes are significantly more comfortable with executing a range of online activities.

Lack of digital ability is the stark reality among very low and medium/low income households. More than half of the individuals living with a household income of less than \$25K report a below average skill level. On the other hand, ability constraints are virtually non-existent among households with income levels over \$100K.

Those living at or below the poverty level and those who primarily speak a language other than English are more interested than their counterparts in a majority of the technology training topics.

Households are split on training topics based on presence of children in the home. Those with children are more likely to be interested in training on using advanced software, while those without children are more interested in training on using basic software.

Percent Interested (Very/Possibly Net) in Technology Training Topic	Total	Lower Income (At or below the 135% FPL)	Higher Income (Above the 135% FPL)	Children in Household	No Children in Household	English as Primary Language	Primary Language Other than English
Protecting yourself and your data online	71%	70%	72%	71%	72%	72%	68%
Using advanced software (e.g. coding, design, video editing)	54%	55%	54%	63%	50%	54%	60%
Computer hardware or mobile device troubleshooting	51%	59%	50%	48%	52%	51%	53%
Learning to create, edit, and publish my own work	47%	57%	45%	52%	45%	46%	57%
Using basic software (e.g. word processing, spreadsheet applications)	33%	51%	31%	29%	36%	32%	52%
Selling products or services online	30%	38%	29%	30%	29%	29%	36%
Setting up / Using social media	22%	41%	20%	21%	24%	21%	39%
Job searching and online job applications	21%	42%	19%	25%	21%	20%	38%
Setting up / Using email	19%	43%	17%	15%	23%	18%	41%

Base: Total Answering – By Impacted Group – Lower Income (n373-n385), Higher Income (n3790-n3825), Children in HH (n1420-n1434), No Children in HH (n2181-n2210), English as Primary Language (n3870-n3914), Primary Language other than English (n219-n224). Household Weight. Q19 - Please rate how interested you or anyone in your household would be in each of the following technology training topics.

Race and ethnic minorities and households impacted by a disability are more interested in the technology training topics.

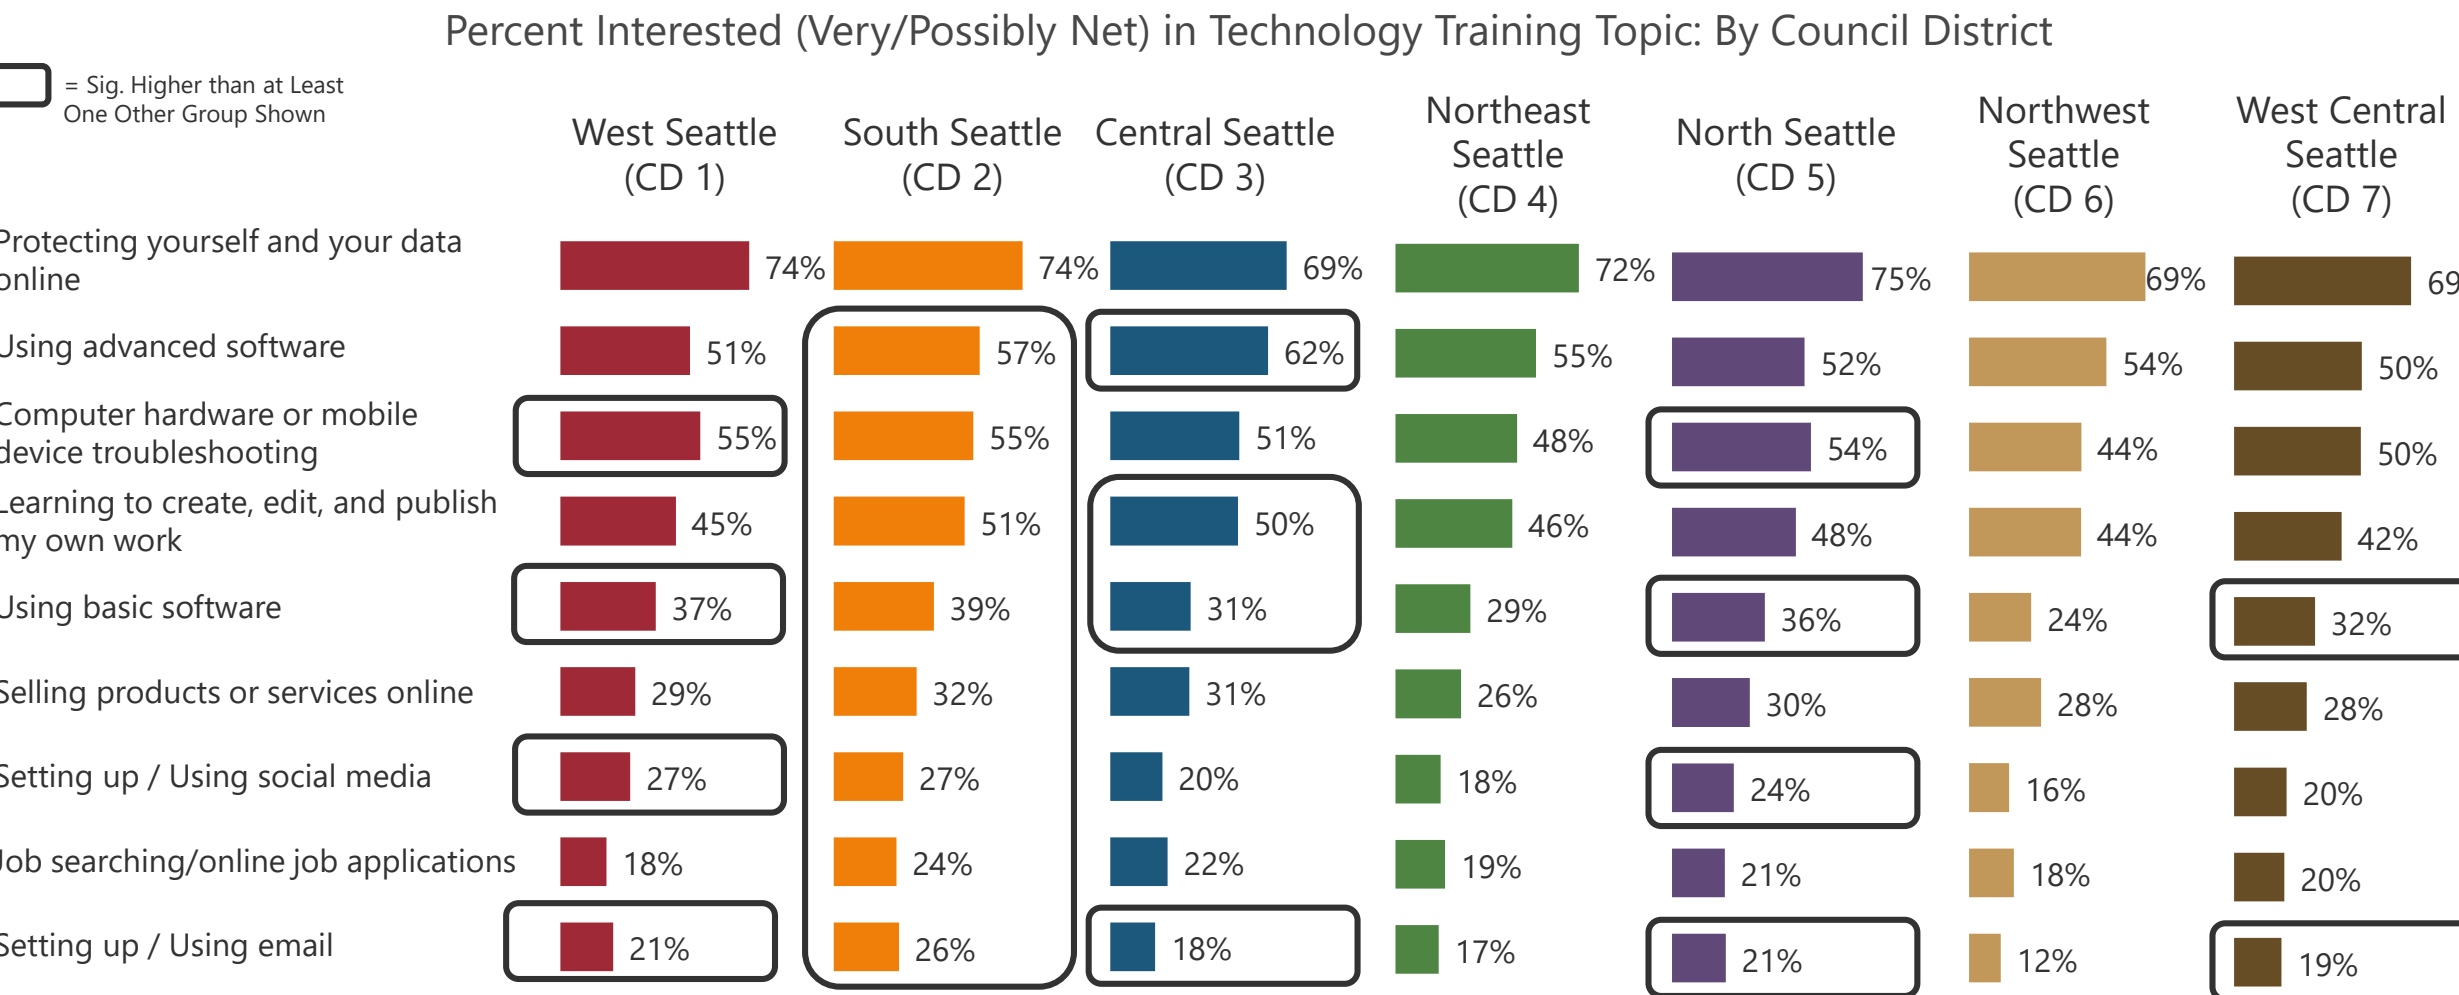

Also, older adults are more likely to have interest in training topics including protecting themselves, troubleshooting, and setting up and using social media and email.

Percent Interested (Very/Possibly Net) in Technology Training Topic	Total	White	Race/Ethnic Minorities	Less than 65 years old	65 years old and older	Household Member Living with a Disability	No Household Member Living with a Disability
Protecting yourself and your data online	71%	71%	71%	68%	78%	78%	71%
Using advanced software (e.g. coding, design, video editing)	54%	52%	62%	62%	36%	56%	54%
Computer hardware or mobile device troubleshooting	51%	49%	54%	48%	56%	61%	50%
Learning to create, edit, and publish my own work	47%	44%	56%	50%	39%	54%	46%
Using basic software (e.g. word processing, spreadsheet applications)	33%	30%	42%	28%	44%	52%	31%
Selling products or services online	30%	26%	39%	33%	22%	37%	29%
Setting up / Using social media	22%	20%	30%	18%	30%	45%	20%
Job searching and online job applications	21%	18%	32%	24%	12%	37%	20%
Setting up / Using email	19%	17%	28%	14%	31%	45%	17%

Race/Ethnic Comparison: Black residents are significantly more interested in training for using basic software (63%), compared to Hispanic (41%), Mixed race (39%), Asian (37%), and White residents (30%). Black residents are also significantly more interested in training for job searching online (45%), compared to Asian, Hispanic, Mixed race (all at 30%) and White residents (18%).

Interest in protecting yourself, using advanced software, and device troubleshooting are the most popular training topics among Seattle residents.

West Seattle, South Seattle, Central, and North Seattle residents (Council Districts 1, 2, 3, 5) have the greatest amount of interest across all the possible training topics.

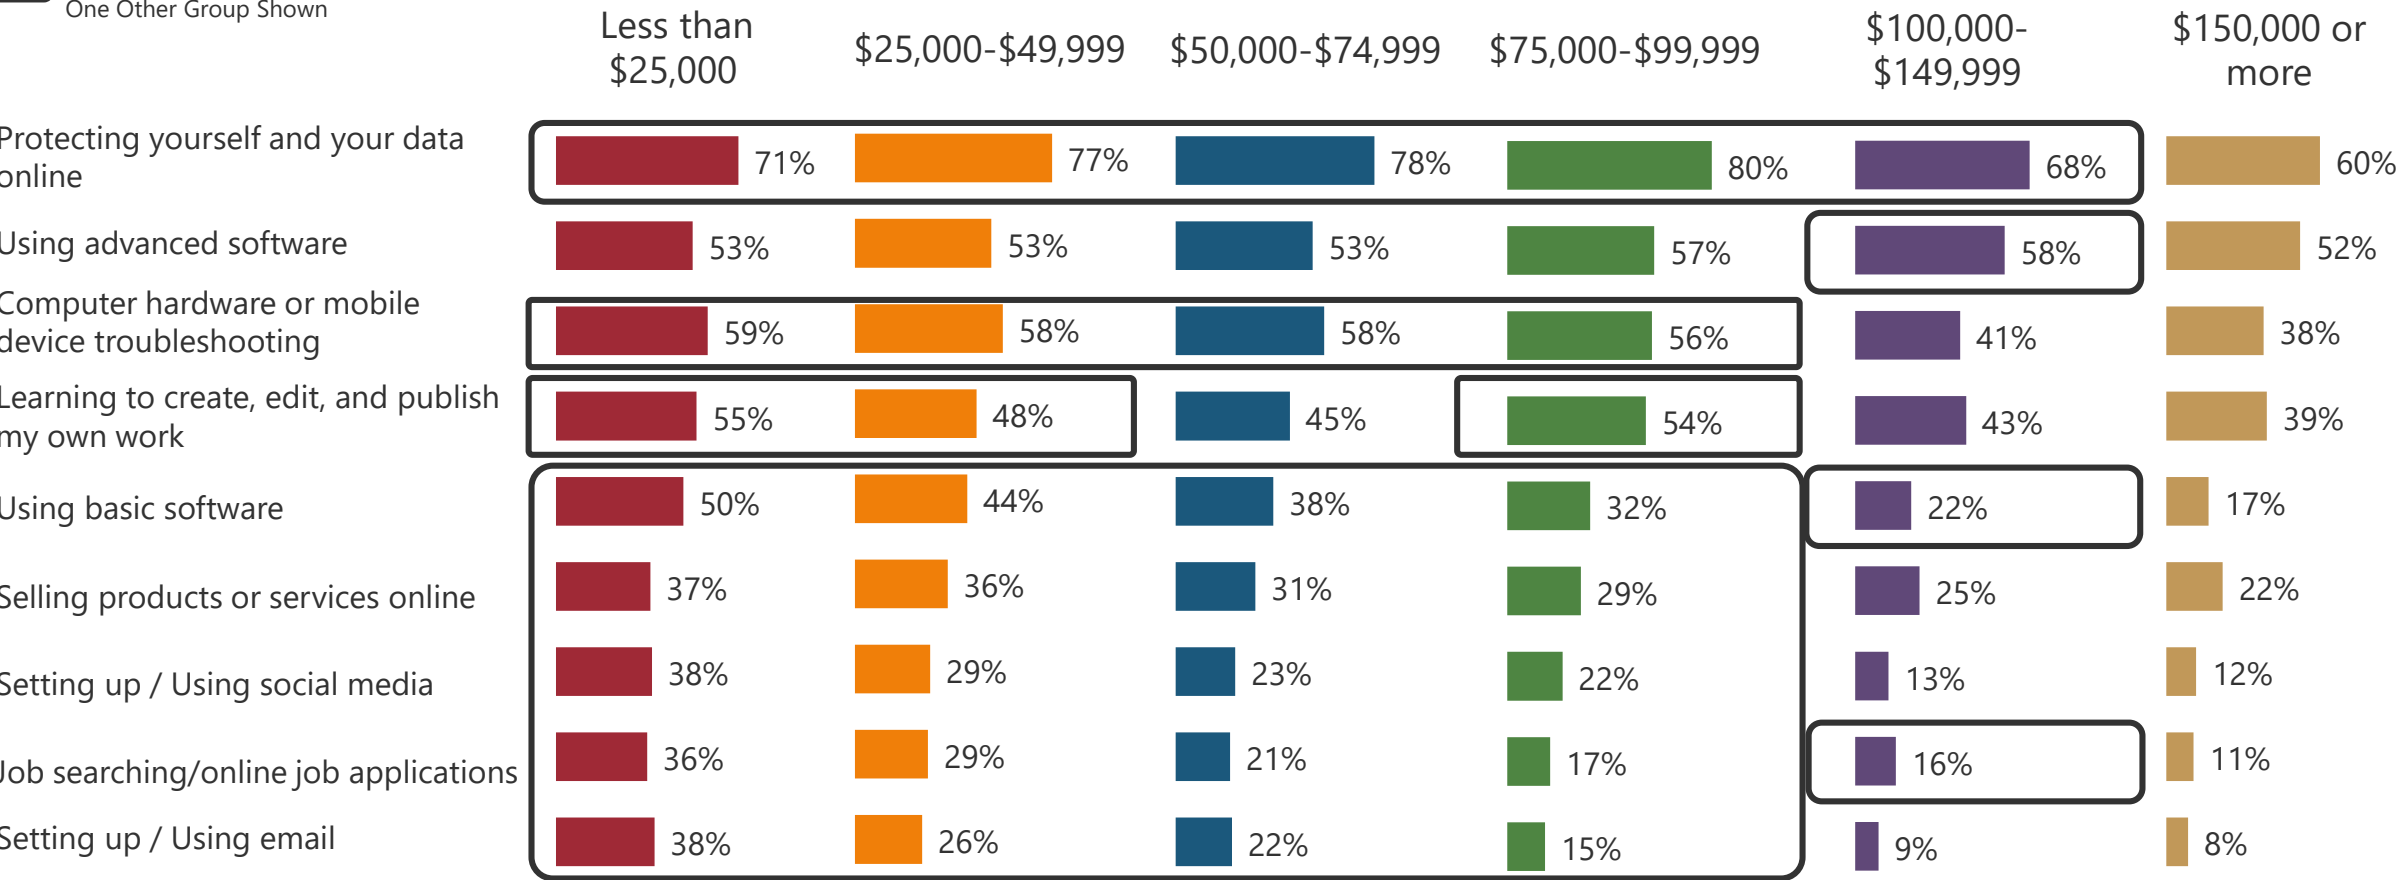

Residents with lower incomes are significantly more interested in attending technology training courses.

Those in households with less than \$100K in annual income are significantly more interested learning about most topics presented (except using advanced software).

Percent Interested (Very/Possibly Net) in Technology Training Topic: By Income

 = Sig. Higher than at Least One Other Group Shown

Base: Total Answering – <\$25K (n559-n576), \$25K-\$50K (n485-n490), \$50K-\$75K (n463-n468), \$75K-\$100K (n427-n433), \$100K-\$150K (n685-n688), \$150K+ (n895-n899). Household Weight.
Q19 - Please rate how interested you or anyone in your household would be in each of the following technology training topics.

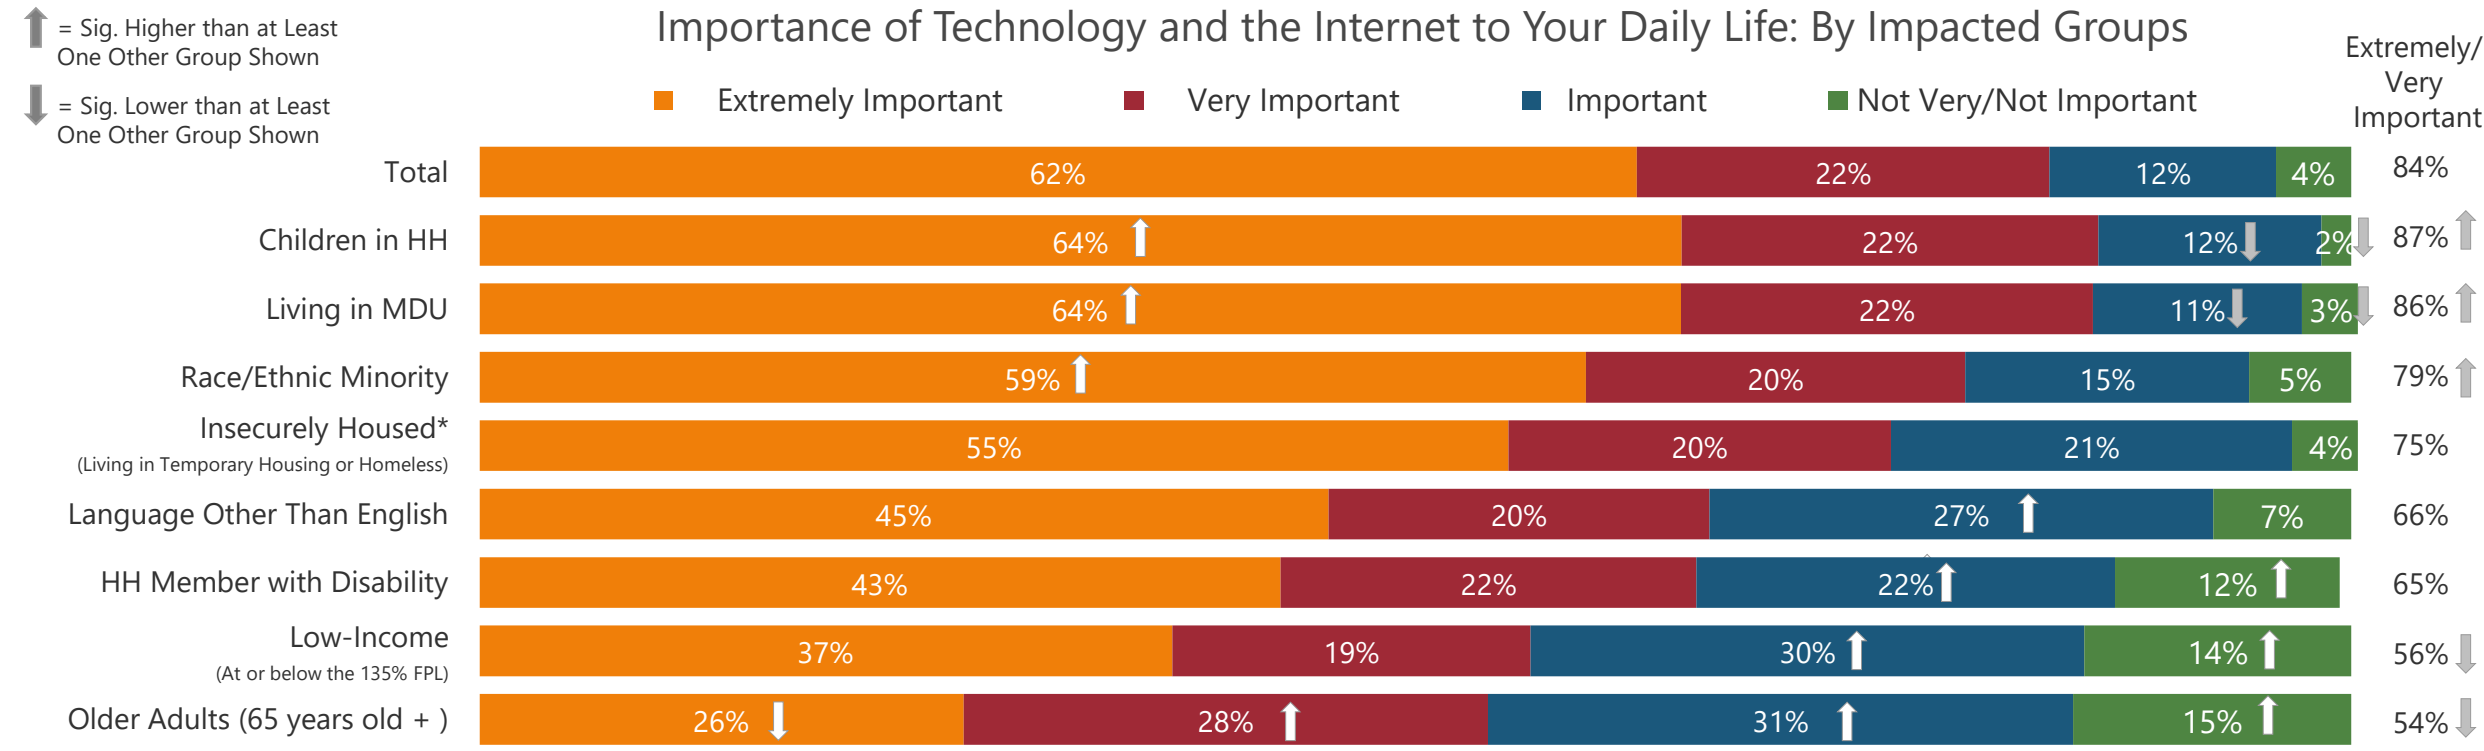

Technology Attitudes

- Importance of Technology and the Internet to Your Daily Life
- Effect of the Internet and Technology on You and Your Family
- Effect of the Internet and Technology on Society
- Concerns Using the Internet

Most of those that are at risk of digital inequity believe technology and the internet is important to their lives and their children’s lives.

Residents living at or below 135% of federal poverty level and older adults (65 years old and older) are more likely to place less importance on technology and the internet.

Those with children in the household (HH), those living in a multi-dwelling unit (MDU), or members of a race or ethnic minority are more likely to place higher importance on technology in their daily lives.

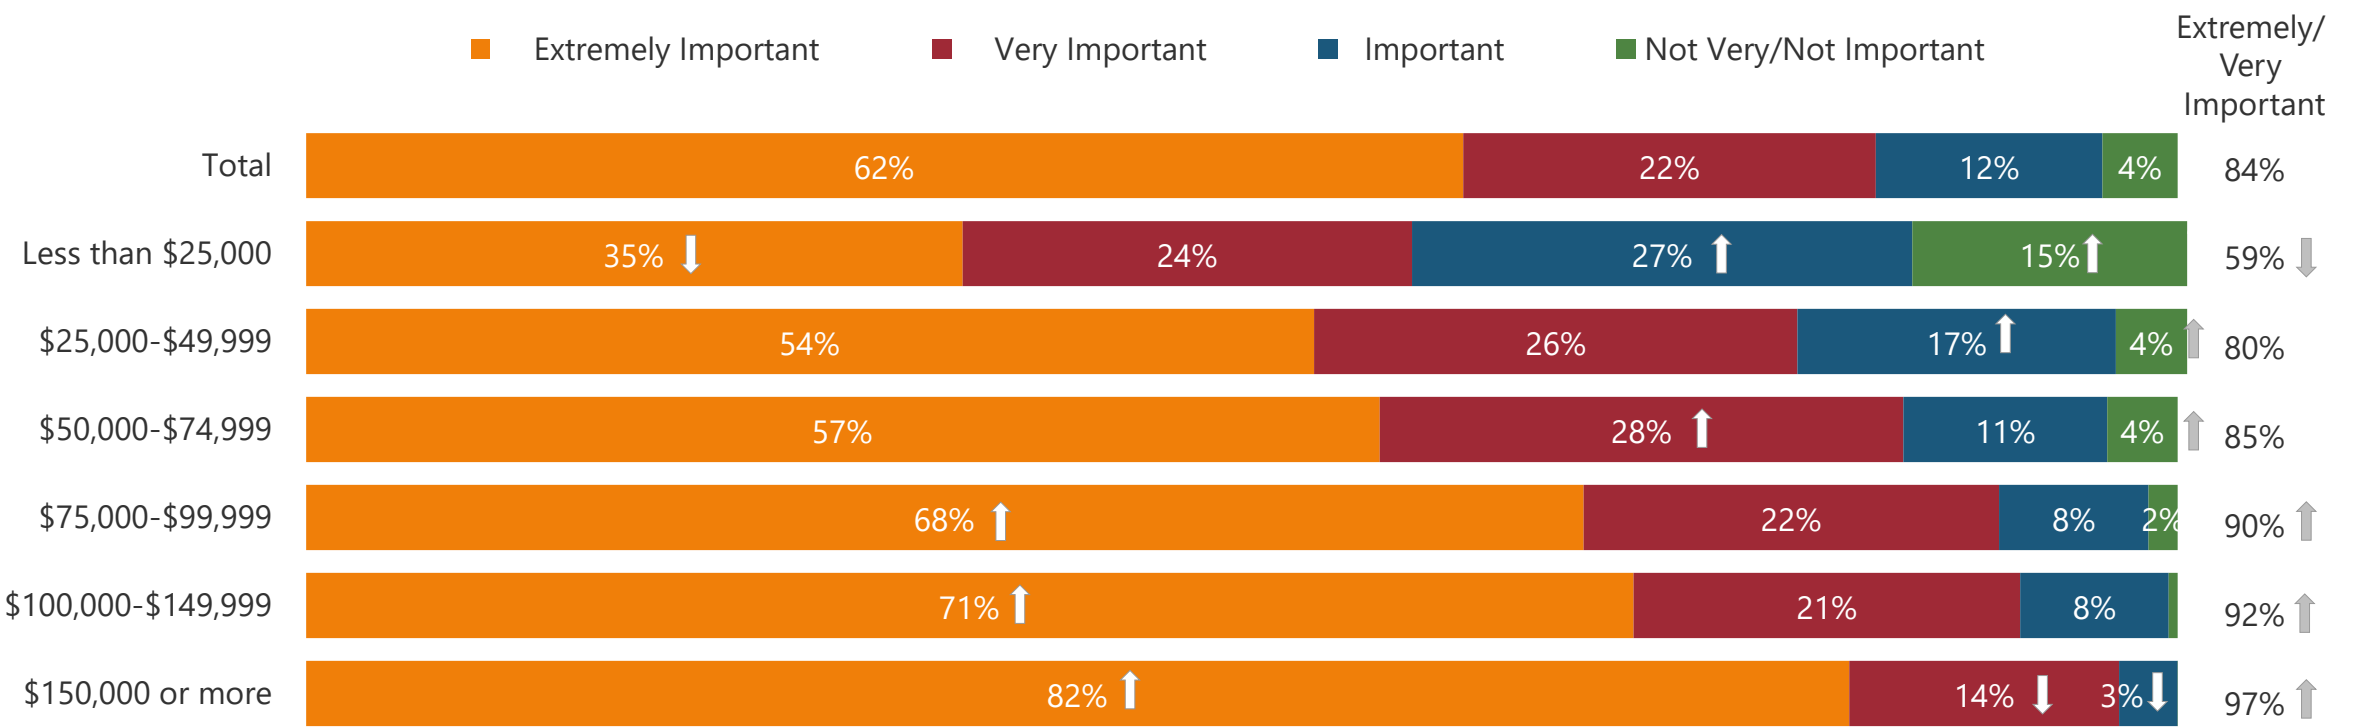

Race/Ethnic Comparison: Only two thirds of Black residents (63%) believe technology and the internet is important to their daily lives. This is significantly less than White (86%), Asian (82%), Hispanic (82%), and Mixed race residents (89%).

Base: Total Answering, Total (n4234), By Impacted Group – Primary Language Other than English (n232), Race/Ethnic Minority (n901), Insecurely Housed (n52*), Older Adults (Age 65+) (n859), Low Income (n398), Living in MDU (n1517), Living with a Disability (n417), Children in HH (n1440). Individual Weight. *Limited sample size. Sub-segment analysis warrants further research and/or a large sample size.
Q20 - How important is technology and the internet to your daily life?

Individuals with higher incomes, when compared to those with lower incomes, are more likely to say the internet is extremely important to their life.

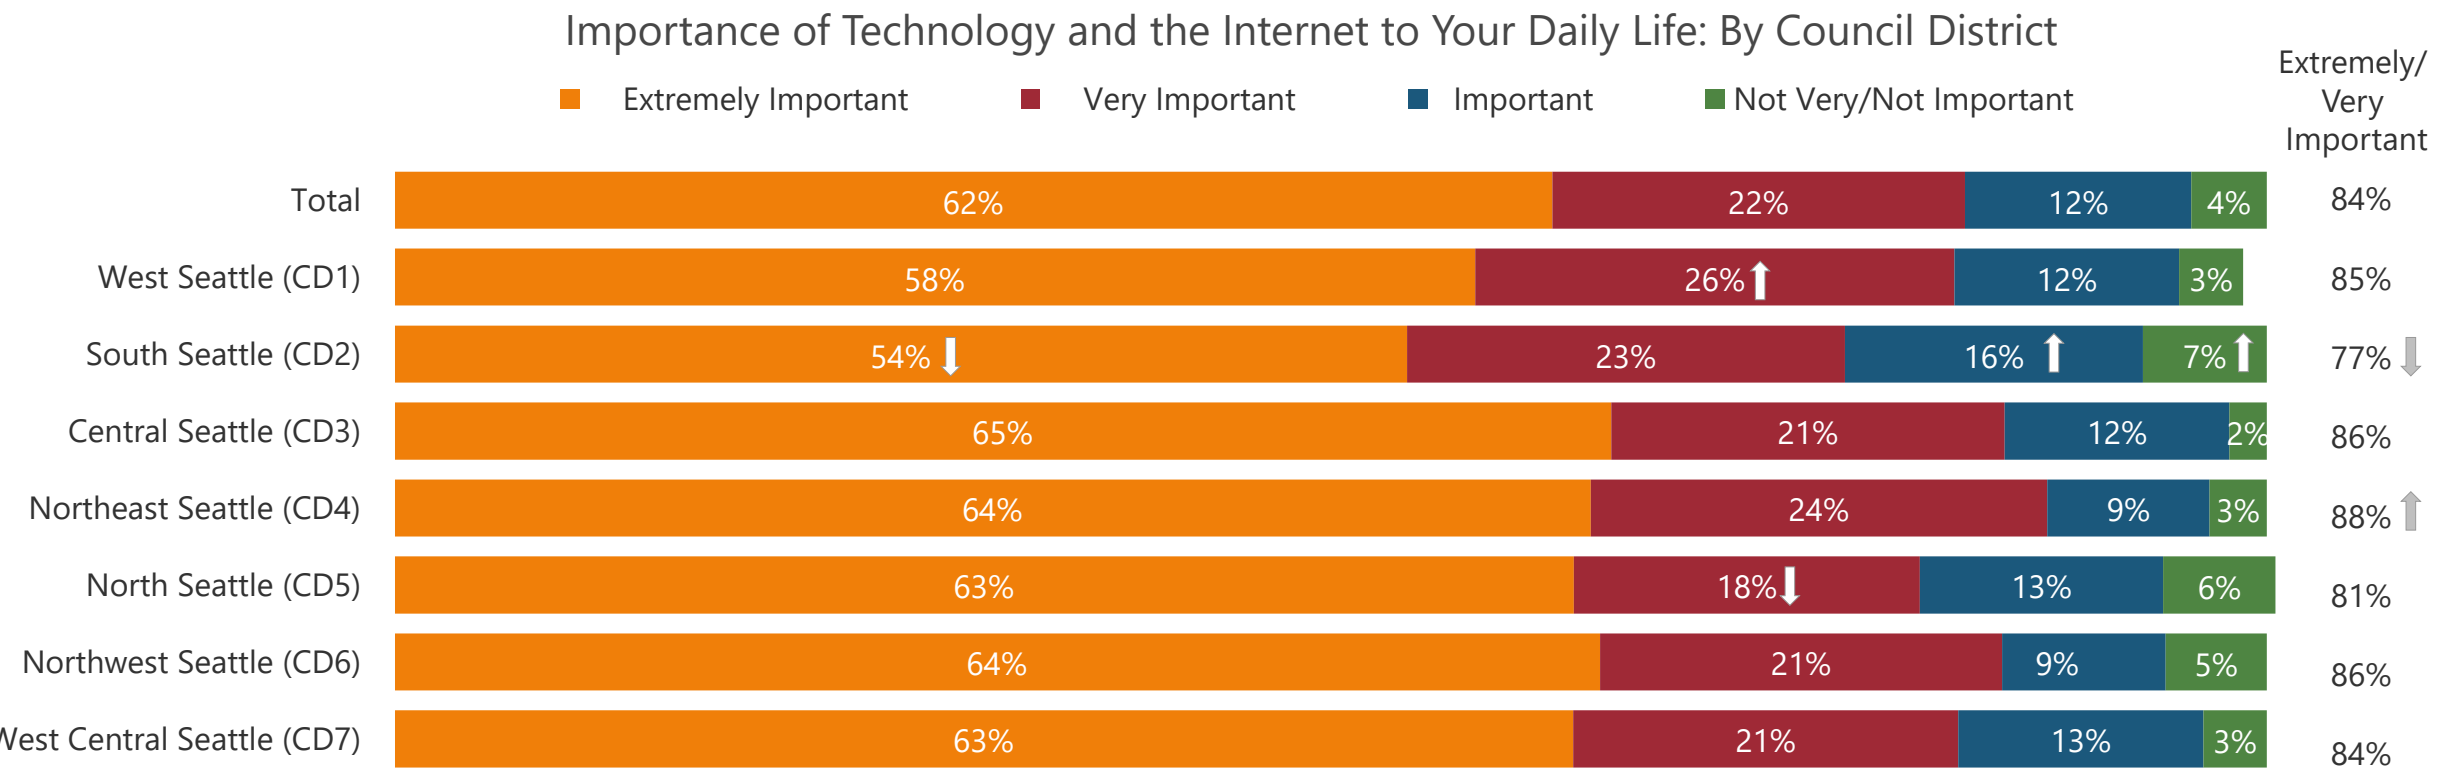

Individuals with household income less than \$25,000 are more likely than any other group to rate technology and the internet as not important to their lives.

Importance of Technology and the Internet to Your Daily Life: By Household Income

Base: Total Answering, Total (n4234), By Income: <\$25K (n590), \$25K-\$49.9K (n496), \$50K-\$74.9K (n468), \$75K-\$99.9K (n432), \$100K-\$149.9K (n692), \$150K+ (n900). Individual Weight.
Q20 - How important is technology and the internet to your daily life?

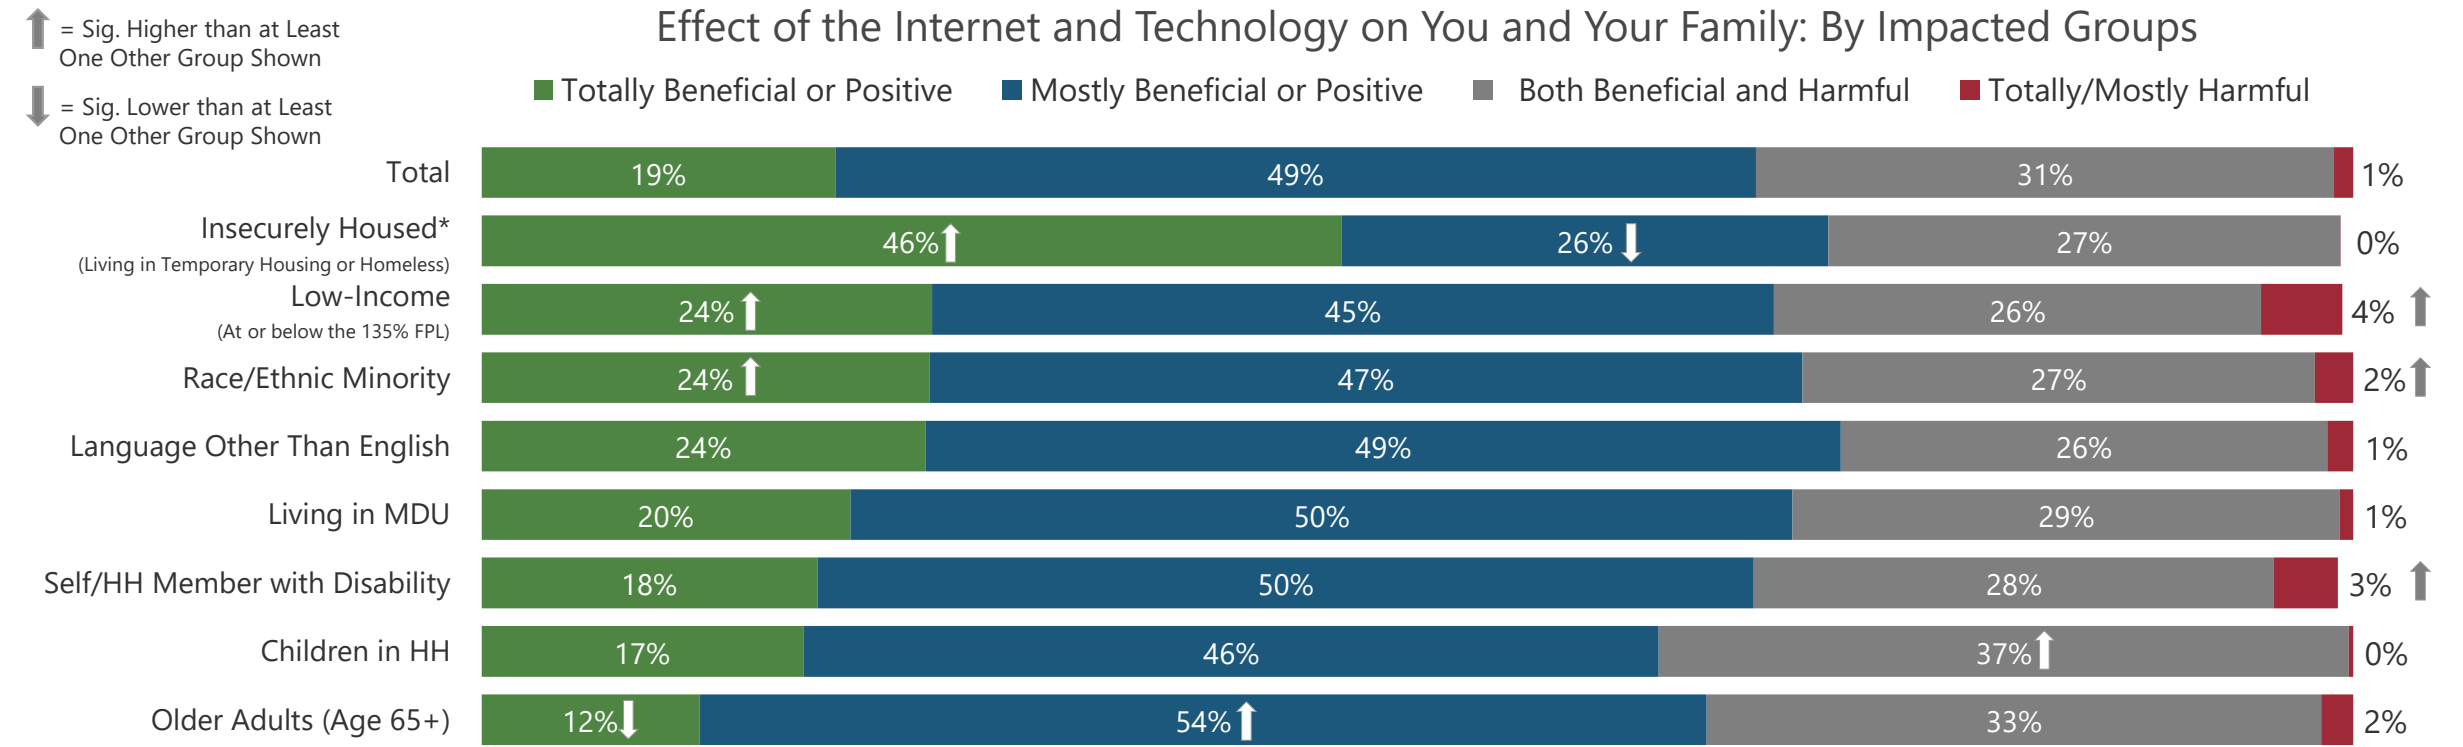

South Seattle residents (CD 2) are less likely than those living in other areas of the city to see technology and the internet as important to their life.

Base: Total Answering, Total (n4234), By Council District: CD1 (n623), CD2 (n595), CD3 (n511), CD4 (n575), CD5 (n763), CD6 (n640), CD7 (n469). Individual Weight.
Q20 - How important is technology and the internet to your daily life?

Those with children in the household (HH) and older adults are the most likely groups to feel the internet and technology has been *both* beneficial and harmful to themselves or their families.

Residents that are insecurely housed, those in low income households, and race/ethnic minorities are the most likely to rate the effect of the internet and technology as “totally beneficial.”

Race/Ethnic Comparison: Only half of Black residents (55%) are likely to believe internet has a positive impact (totally positive or mostly positive) on themselves and their families, compared to White (67%), Asian (78%), and Hispanic residents (73%).

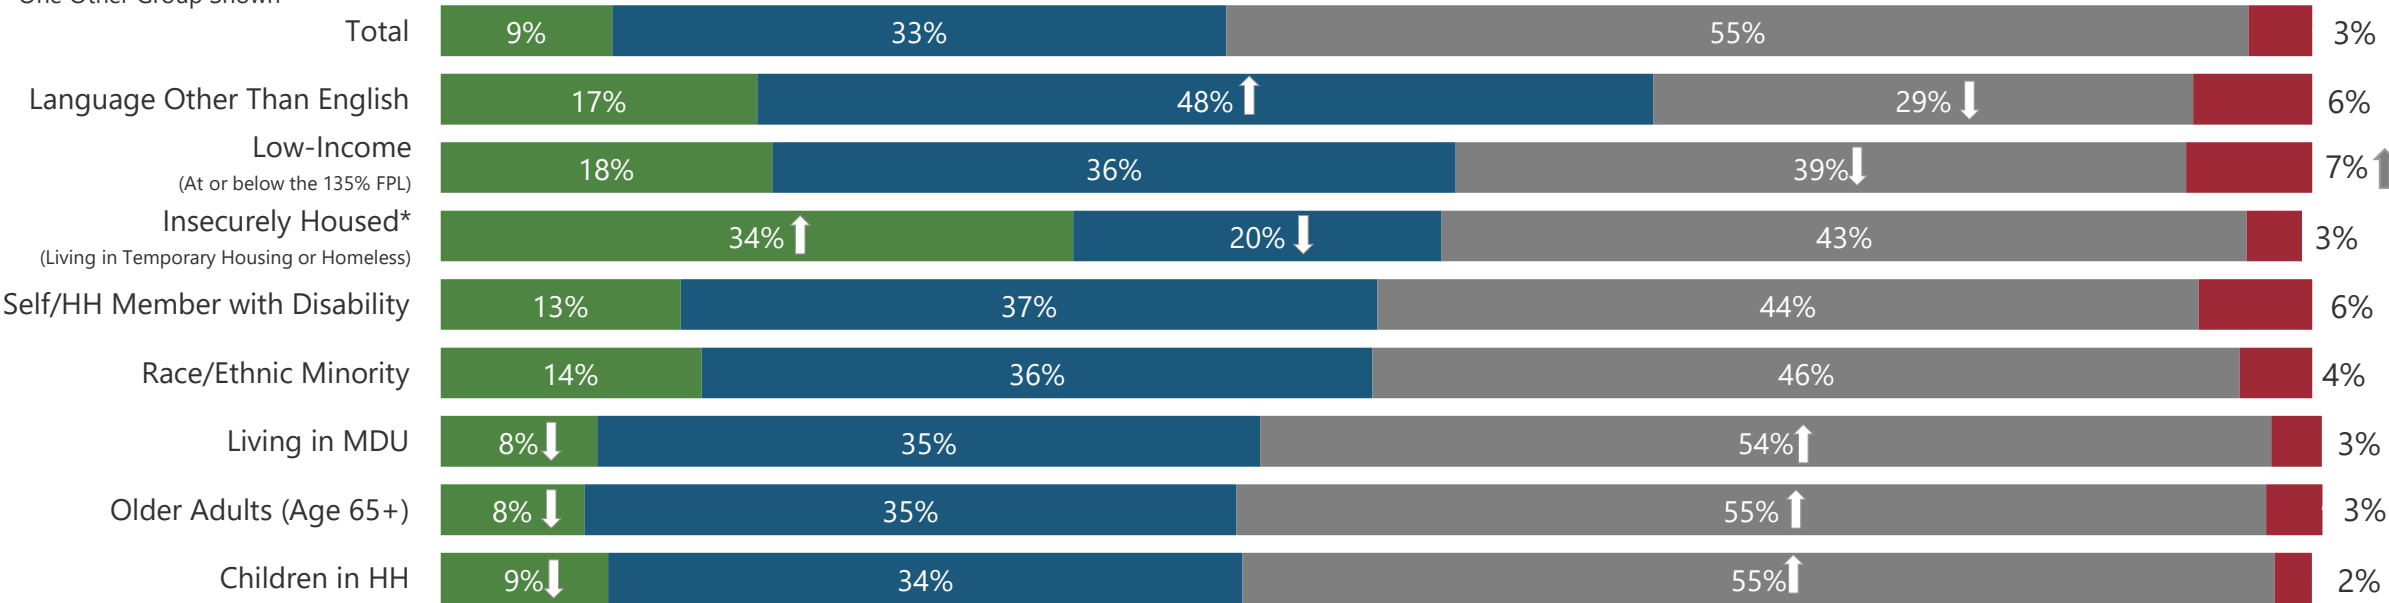

Among the unique-needs groups, those with children in the household (HH), residents of MDUs, or those over age 65 are more likely than others to feel the internet and technology has been both beneficial and harmful to society.

Those whose primary language is other than English, those with low incomes, or the insecurely housed are more likely than others to rate the effect as beneficial.

↑ = Sig. Higher than at Least One Other Group Shown
↓ = Sig. Lower than at Least One Other Group Shown

Effect of the Internet and Technology on Society: By Impacted Groups

Totally Beneficial or Positive Mostly Beneficial or Positive Both Beneficial and Harmful Totally/Mostly Harmful

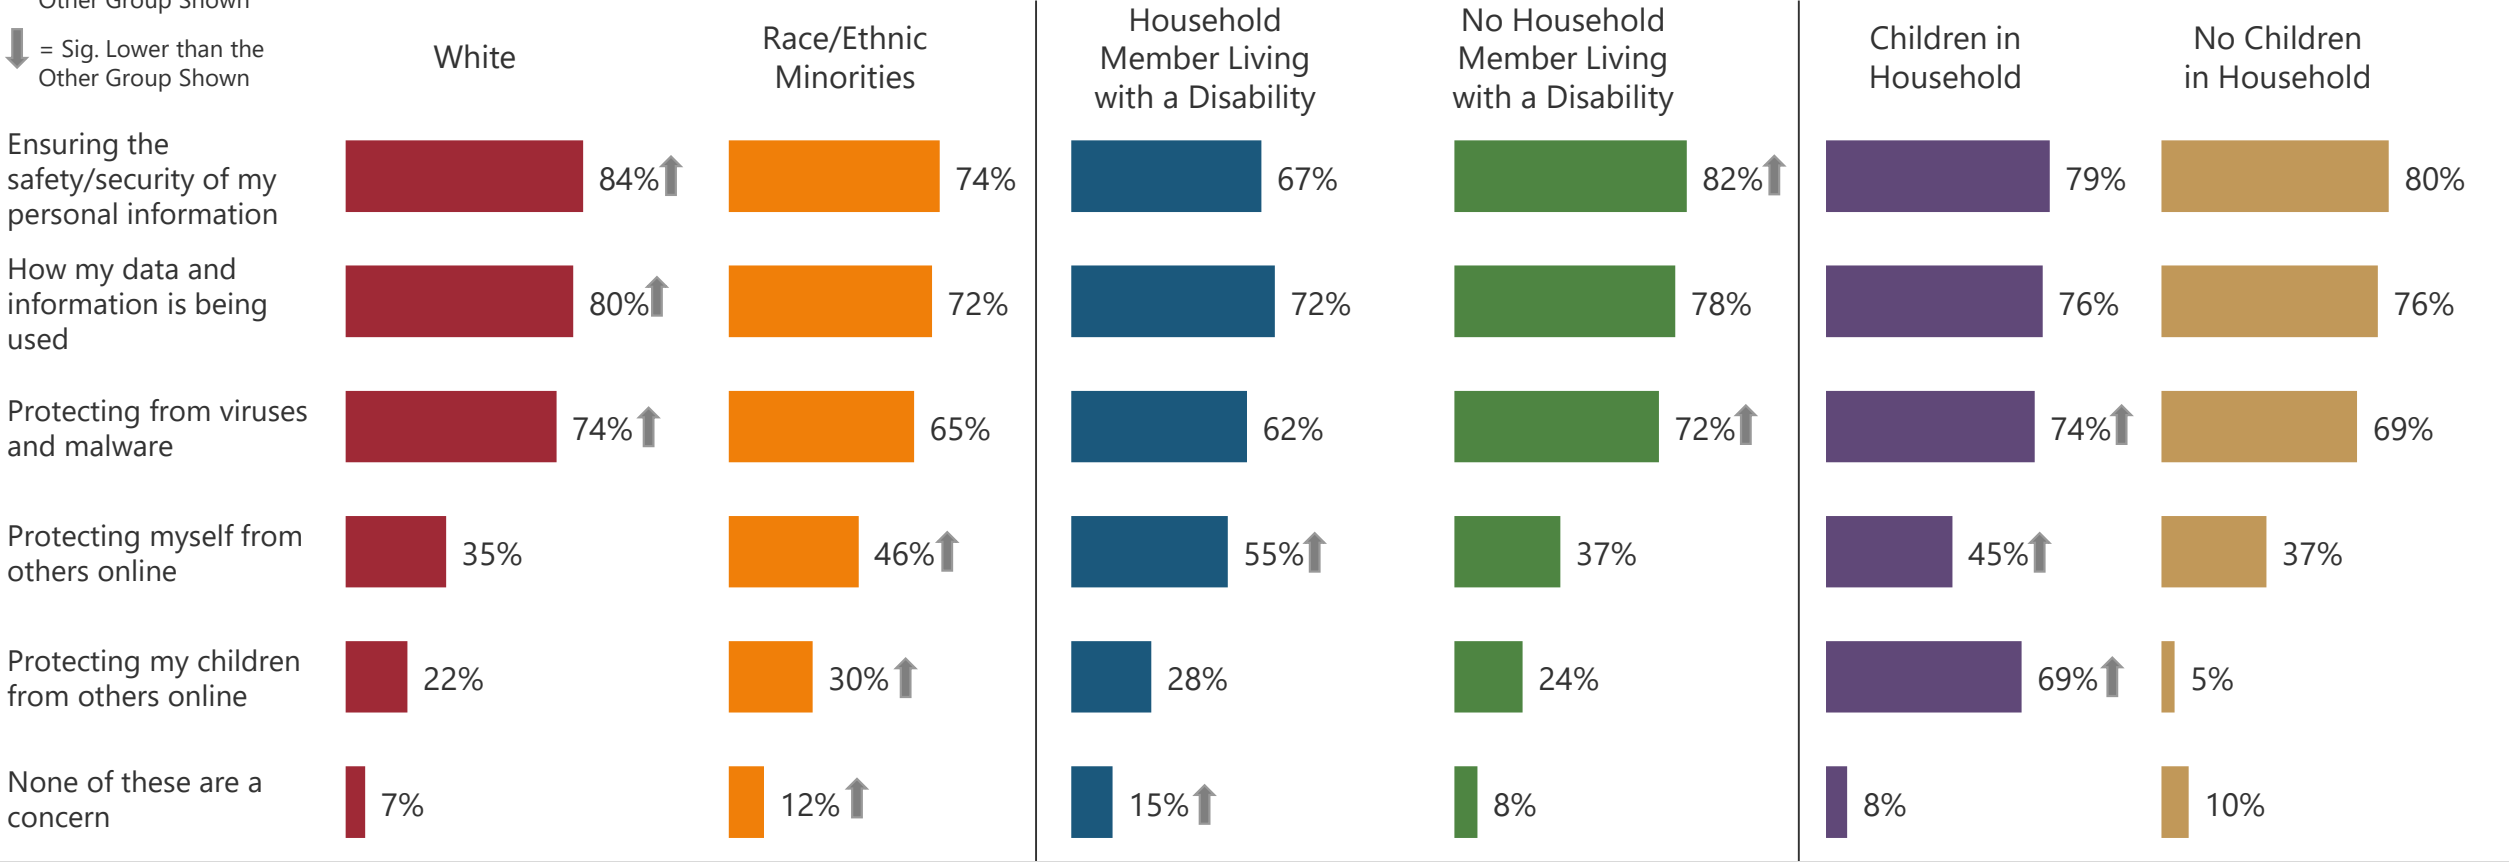

Race/Ethnic Comparison: Asian (59%) and Hispanic residents (50%) are the most likely to feel the effect of technology on society is at least mostly positive. Black residents are the most likely to believe the effect is at least somewhat harmful (9%).

Base: Total Answering, Total (n4183), By Impacted Group – Primary Language Other than English (n217), Race/Ethnic Minority (n883), Insecurely Housed (n48*), Age 65+ (n841), Low Income (n372), Living in MDU (n1500), Living with a Disability (n400), Children in HH (n1435). Individual Weight. *Limited sample size. Sub-segment analysis warrants further research and/or a large sample size.
Q22-2 - What effect does internet and technology have on Society as a whole?

Residents at risk of digital inequity (minorities, households with members living with a disability) and those with children in the household are more likely to have concerns about using the internet. However, those concerns vary by the needs of each group.

↑ = Sig. Higher than the Other Group Shown
↓ = Sig. Lower than the Other Group Shown

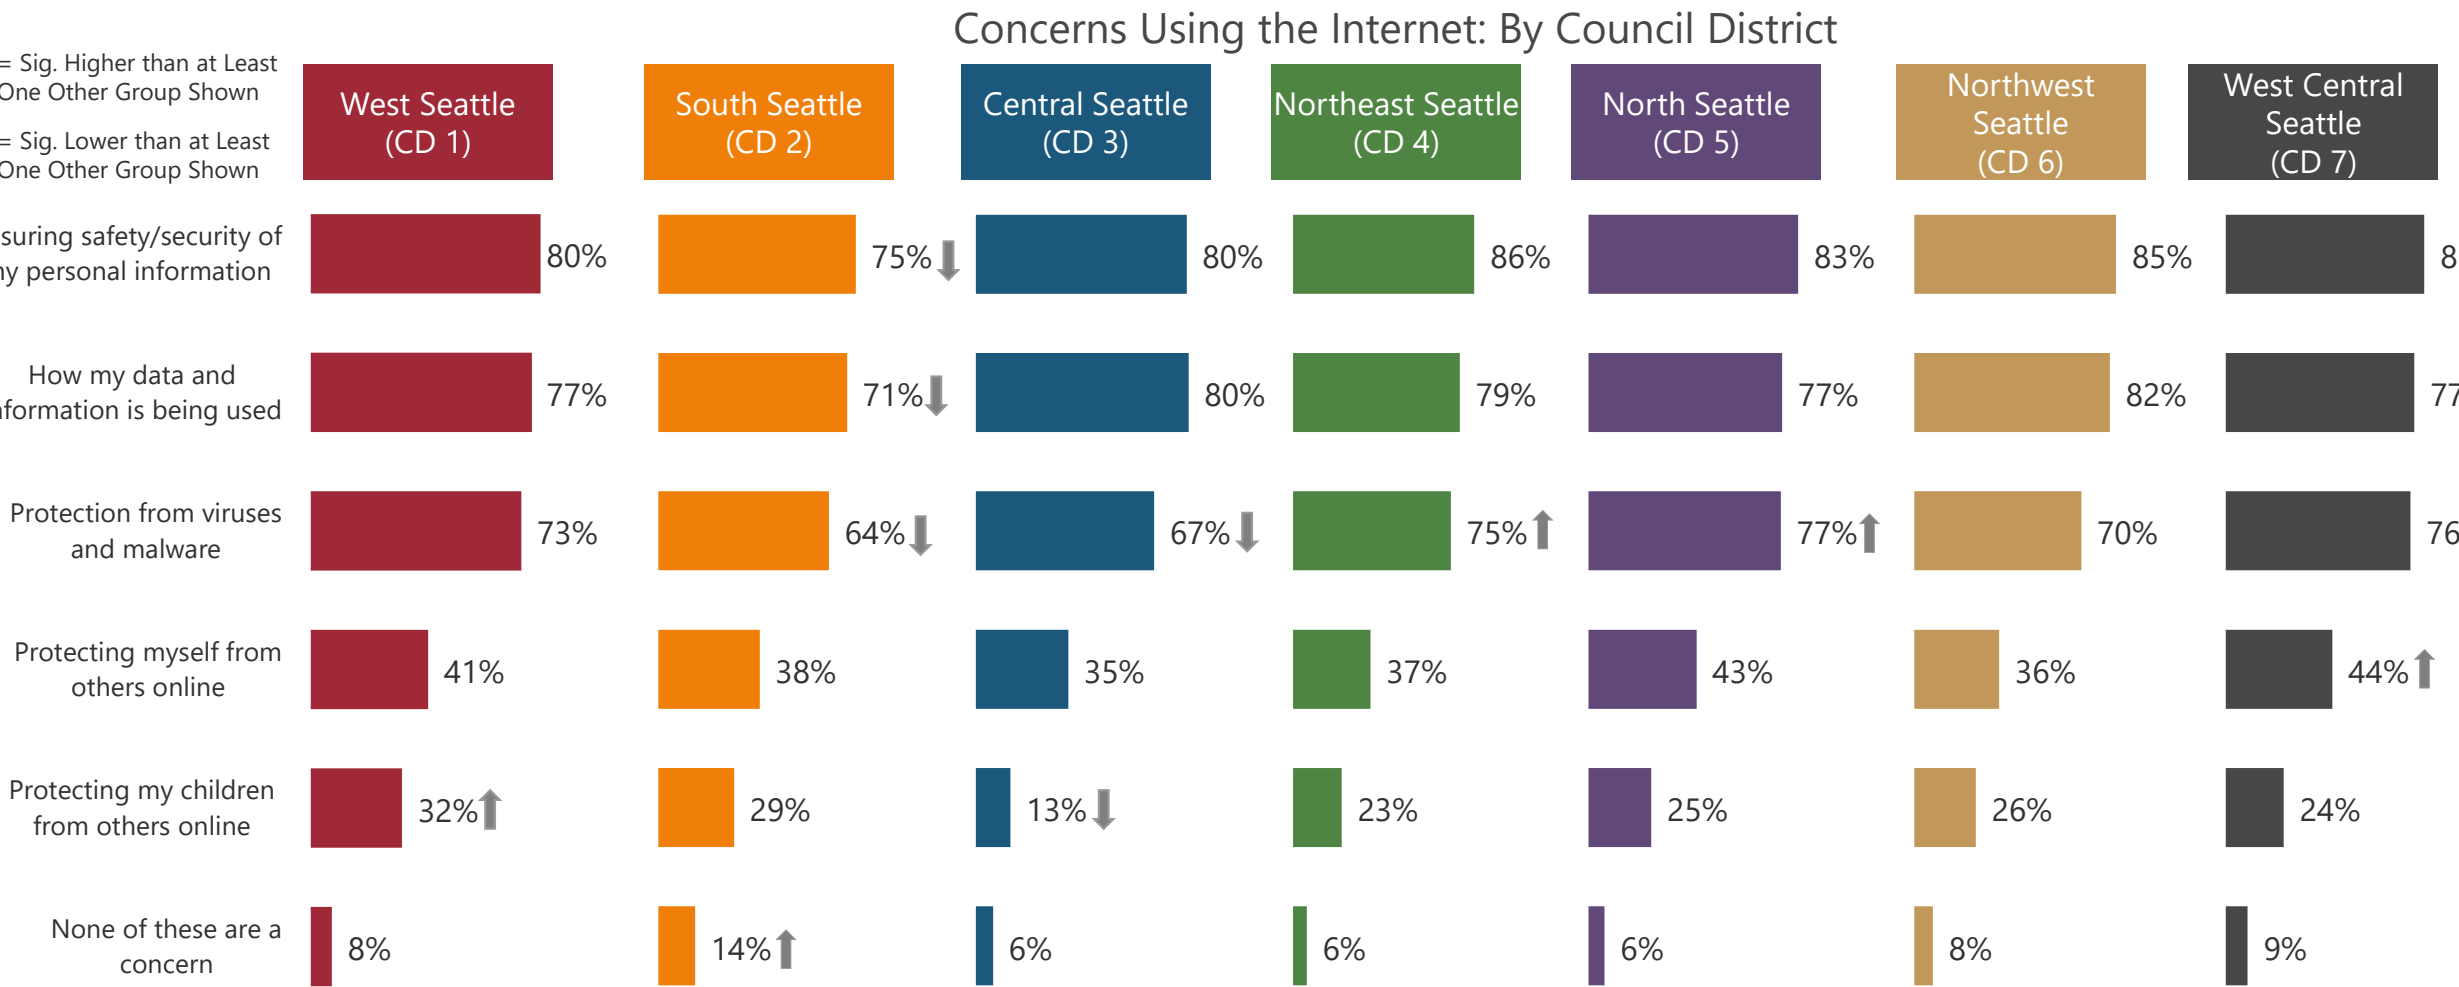

Concerns Using the Internet: By Impacted Groups

Specific Race/Ethnic Comparison: White residents (84%) are more likely than Black (66%), Hispanic (75%), and Asian residents (77%) to have concerns about ensuring the safety/security of personal information. Black (51%) and Asian residents (47%) are more likely to have concerns about protecting themselves online, compared to White residents (35%).

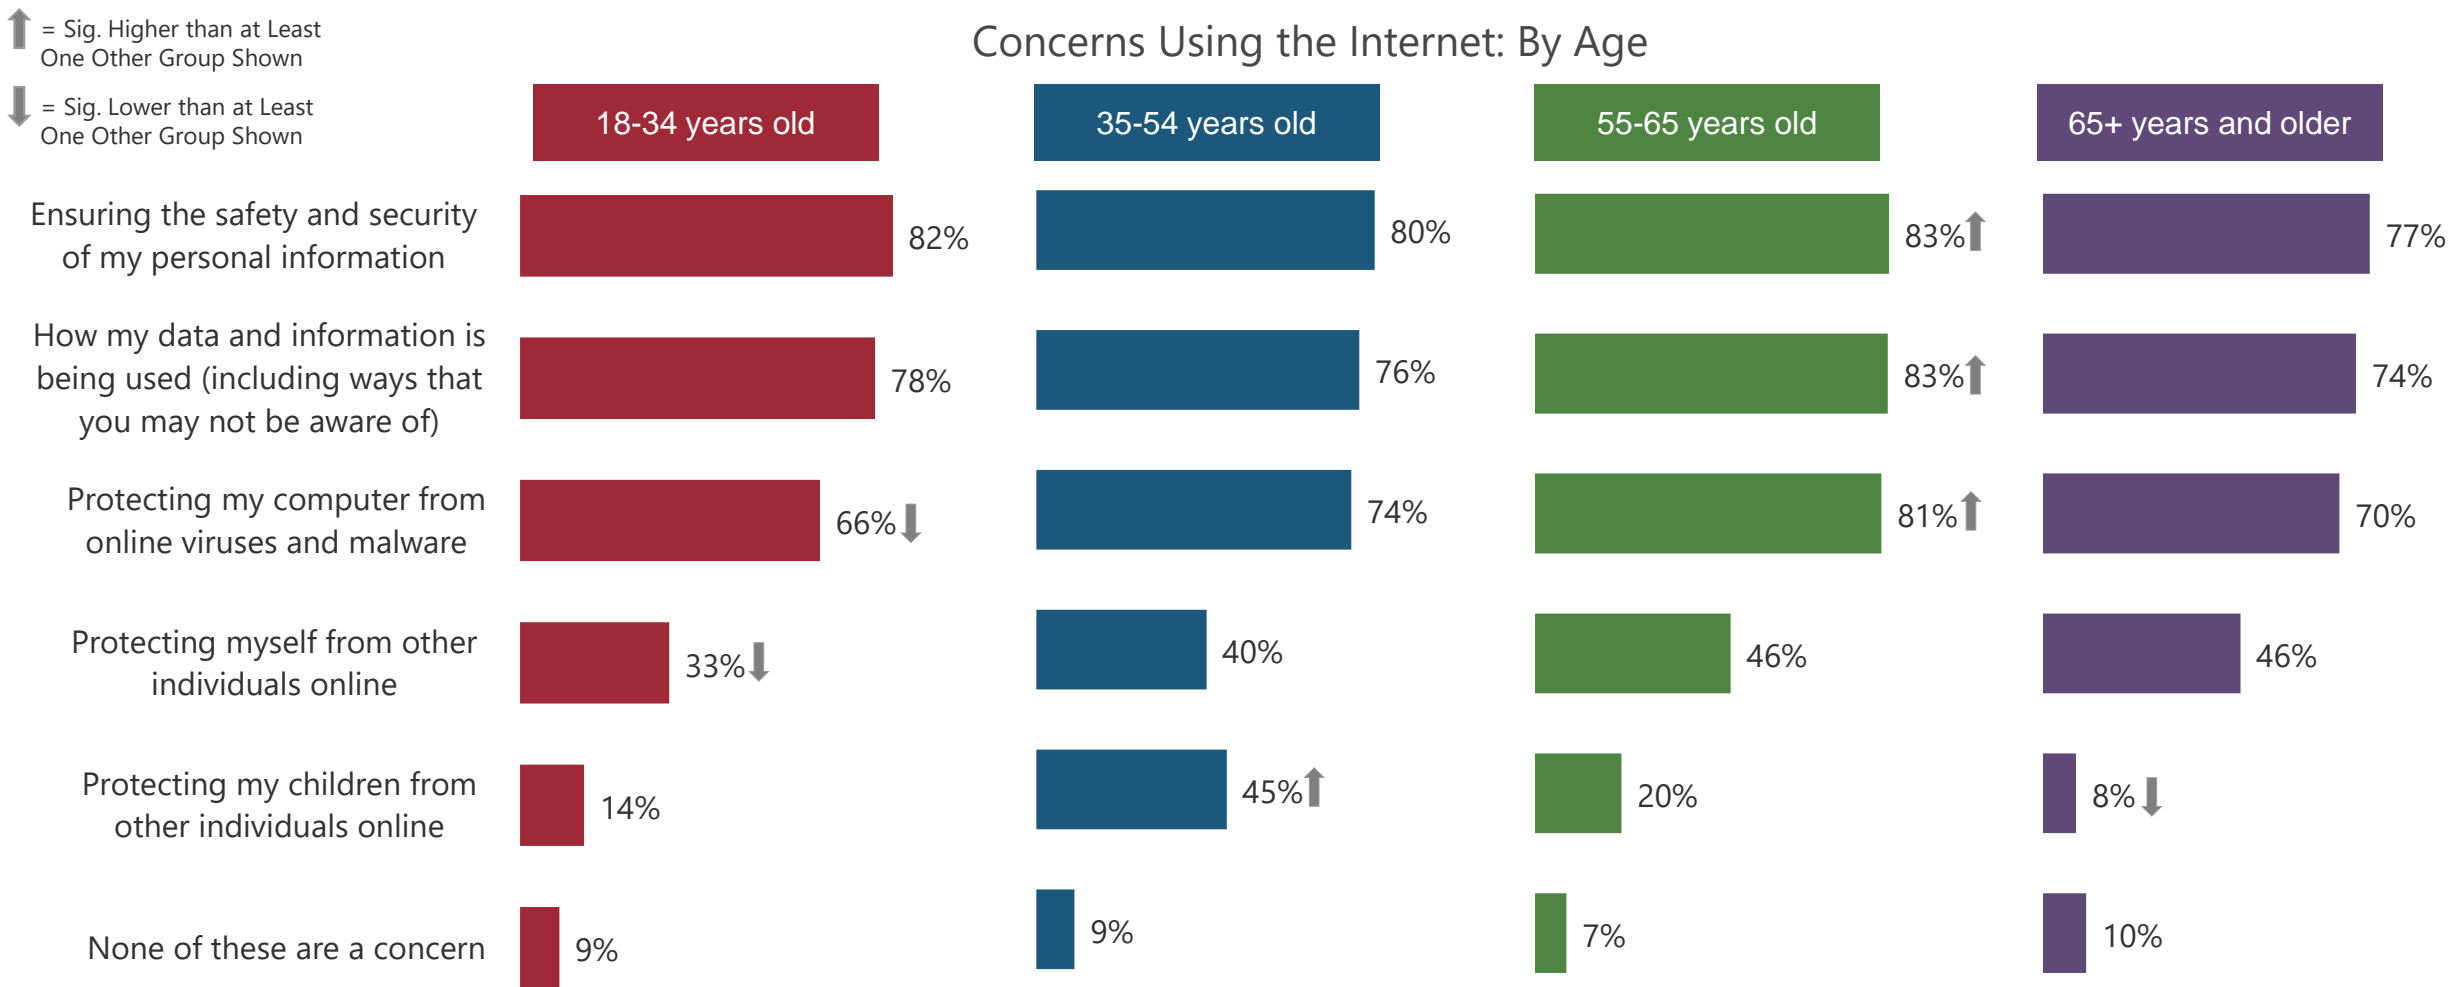

Base: Total Answering, By Impacted Group – White (n3016), Race/Ethnic Minority (n897), Living with a Disability (n407), No one in the household Living with a Disability (n3781), Children in HH (n1438), No Children in HH (n2199). Individual Weight.
Q14 - Which of the following are concerns you have when it comes to accessing and using the internet:

Protection from viruses and malware is more of a concern in North Seattle (CDs 4, 5 and 7). Protecting children from others online is less of a concern in Central Seattle (CD 3) and more of a concern in West Seattle/South Park (CD 1). South Seattle (CD 2) residents are more likely to have none of the listed concerns.

City residents, regardless of age, are most concerned about the security of their personal information, how their data is used, and protection from viruses.

↑ = Sig. Higher than at Least One Other Group Shown
↓ = Sig. Lower than at Least One Other Group Shown

Primary Language Summary

**(English vs. Non-English
Primary Speakers)**

Summary Highlights: Primary Language - English vs. Non-English

Those living in households (HHs) where primary language is not English are at a disadvantage, with lower likelihood to have an internet connection, fewer types of devices, inadequate connections, and more barriers to navigating the internet. Primary English speaking households are more likely to spend more on internet subscriptions, have more types of devices, and have more digital skills.

Internet / Device Access

Those whose primary language is other than English...
... are *less likely* to have internet access in the home (90%, vs. 95%).
... are *less likely* to have a fixed broadband subscription (79%, vs. 88%).
... *have fewer* types of devices in the home, on average, compared to English primary speakers (2.8 types of devices, vs. 3.4).

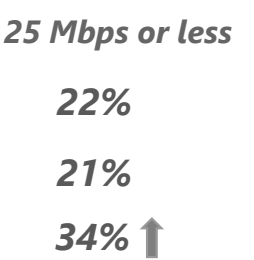

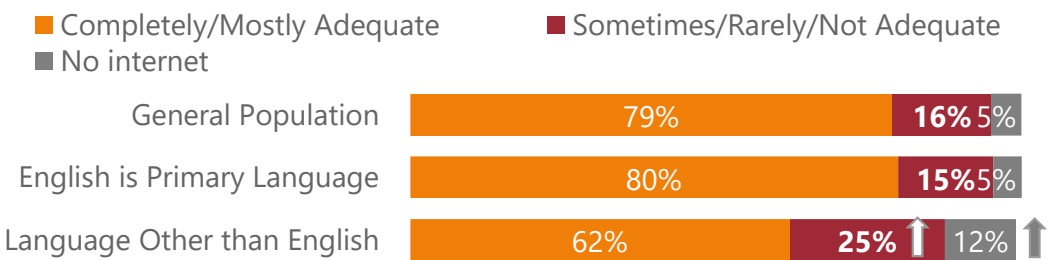

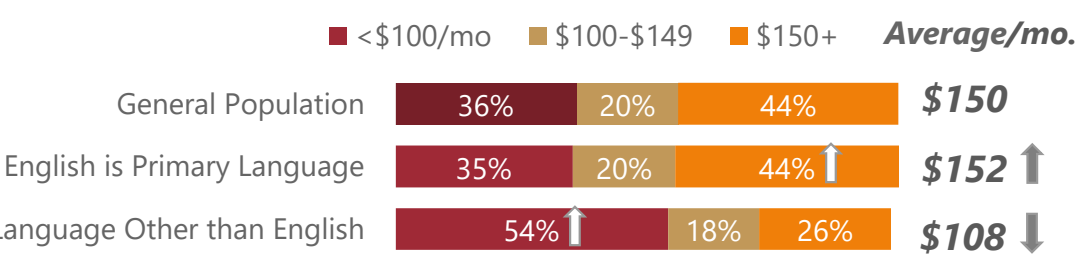

Internet Spend and Adequacy

English primary speakers spend about 40% *more per month* on internet related services and are *more likely* to describe their internet connection as adequate. A higher portion of Non-Primary English speakers have slower download speeds.

Devices and Subscriptions	Gen Pop	English is Primary	Other than English
Have internet access at home	95%	95%	90%↓
With any broadband subscription	92%	92%	87%
With fixed broadband subscription	88%	88%	79%↓
Cellular data plan with no other type of internet subscription	4%	4%	8%↑
Without an internet subscription	6%	6%	12%↑
Average number of types of devices in HH	3.4	3.4	2.8↓
Average number of types of devices owned in HH	3.3	3.3	2.8↓

Subgroup Analysis: Primary Language not English & Living at or below 135% on Federal Poverty Level:

These HH have significantly less access to the internet (75%), broadband subscriptions (72%), fixed broadband subscriptions (59%), average number of types of devices (2.1), average spend (\$76 per month), and completely/mostly adequate internet (34%), compared to higher income residents who also are in primary non-English HHs. This indicates that income may be a strong contributing factor to the differences found between households with English as a primary vs. those who are English as a second language.

↑ = Sig. Higher than the Other Group Shown ↓ = Sig. Lower than the Other Group Shown

Summary Highlights: Primary Language - English vs. Non-English

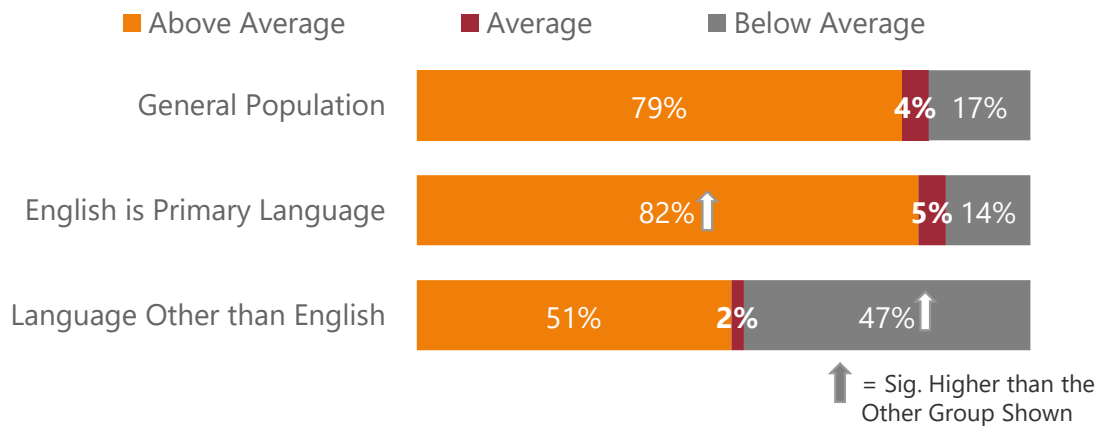

Barriers to Internet Use & Reliance on Others

Those whose primary language is one other than English...
... are *more likely* to have barriers that prevent them from using the internet more (48%, vs. 20%), and to mention “*service is too expensive*” as a barrier (71%, vs. 53% among those with any barriers).
... are *three times as likely* as English speakers to rely on others to access and navigate the internet (33%, vs. 11%).
...are *less likely* to feel confident using devices to access the internet (76%, vs. 91%) or to believe they are “very good” with technology and the internet (59%, vs. 81%).

Digital Skills

Those whose primary language is other than English are *less likely* to feel comfortable doing basic technological tasks, like verifying sources of information found online and solving a problem they have with a device or service using online help.

	Gen Pop	English is Primary	Other than English
Have ANY barriers to internet use	23%	20%	48% ↑
Internet service is too expensive (among those with any barriers)	57%	53%	71% ↑
Rely on others somewhat or a great deal to navigate/access the internet	13%	11%	33% ↑
"I am very confident using (devices) to access the internet" (Agreement)	90%	91%	76% ↓
"I am very good with technology and the internet" (Agreement)	79%	81%	59% ↓

Importance and Impact of Internet/Technology

Those whose primary language is other than English are *less likely* to rate technology and the internet as “very” or “extremely important” to their lives...

Rate technology and the internet very/extremely important...

General Population **84%**
English is Primary Language **86%**
Language Other than English **66%** ↓

... but are *more likely* to believe technology is beneficial or positive to society.

Rate technology and the internet mostly/totally beneficial...

General Population **42%**
English is Primary Language **40%**
Language Other than English **65%** ↑

Subgroup Analysis: Primary Language not English & Living at or below 135% on Federal Poverty Level:
These residents are significantly more likely to report barriers (65%), have below average skills (73%), and are less likely to believe technology and the internet is important (43%) compared to higher income residents who also are in primary non-English HHs.

Housing Situation Summary

**(Home Owners vs. Renters
vs. Insecurely Housed) and
(Single Family Home vs.
Multi-Dwelling Unit (MDU))**

Summary Highlights: Owners, Renters, Insecurely Housed

Home owners are the most likely to be connected and using high speed internet often throughout their household (HH). Renters are also connected but run into barriers and lack of skills (though most use the internet to great extent). Housing insecure residents are the least connected, reliant on cellular data and others for internet access and usage more than other groups, though many have the skills needed to conduct tasks online.

Internet / Device Access

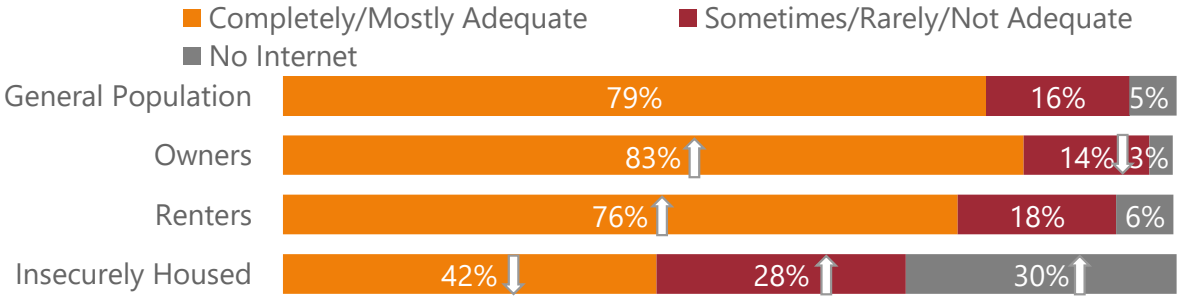

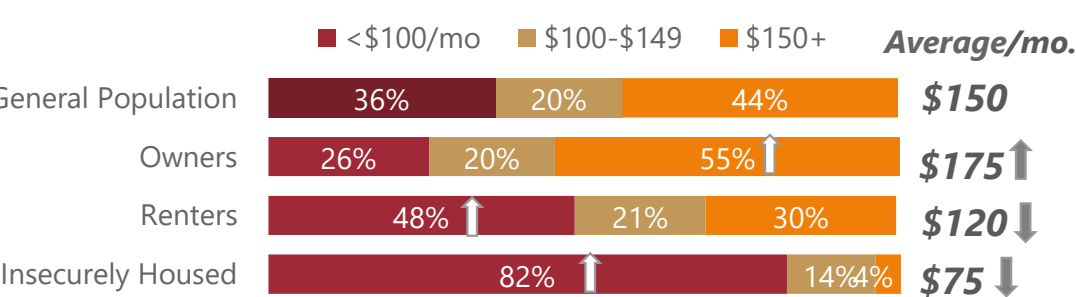

Home owners...
... are *more likely* to have internet access in the home than renters or the insecurely housed (98%, vs. 94% and 65%).
... are *more likely* to have a fixed broadband subscription (94%), while the insecurely housed are *more likely* to rely on cellular data plan only (48%) or to have free access (20%).
... *own more* types of devices, on average, than other groups (3.6 types of devices, vs. 3.2 among renters and 2.4 among insecurely housed).

Devices and Subscriptions	Gen Pop	Owners	Renters	Insecurely Housed
Have internet access at home	95%	98%↑	94%	65%↓
With any broadband subscription	92%	96%↑	89%	52%↓
With fixed broadband subscription	88%	94%↑	84%	5%↓
Cellular data plan with no other type of internet subscription	4%	2%	5%↑	48%↑
Without an internet subscription	6%	3%	9%↑	43%↑
Average number of types of devices in HH	3.4	3.6↑	3.2	2.4↓
Average number of types of devices owned in HH	3.3	3.5↑	3.1	2.3↓

Internet Spend and Adequacy

Home owners spend 45% *more per month* on internet related services than renters, and nearly two and a half times more than the insecurely housed. Renters also spend significantly more on internet services than the insecurely housed. Home owners and renters are *more likely* than the insecurely housed to describe their internet connection as adequate, with home owners giving the highest ratings to this measure.

↑ = Sig. Higher than at Least One Other Group Shown ↓ = Sig. Lower than at Least One Other Group Shown

Summary Highlights: Owners, Renters, Insecurely Housed

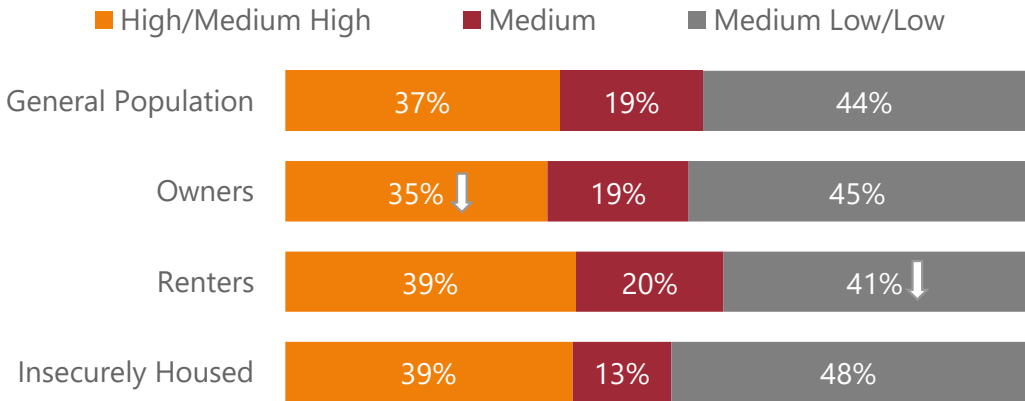

Barriers to Internet Use

The insecurely housed are *most likely* to have internet barriers preventing them from using the internet more. Renters follow behind and owners are the least likely to have barriers. Price is the largest barrier for all three groups.

	Gen Pop	Owners	Renters	Insecurely Housed
Have ANY barriers to internet use	23%	15%↓	27%	59%↑
Internet service is too expensive (among those with any barriers)	57%	47%↓	59%	68%

Online Activities

Renters and those that are insecurely housed are *less likely* than owners to go online often to perform common tasks, such as online banking services, researching and buying online, and working from home.

Impact of Internet/Technology on Themselves and Society

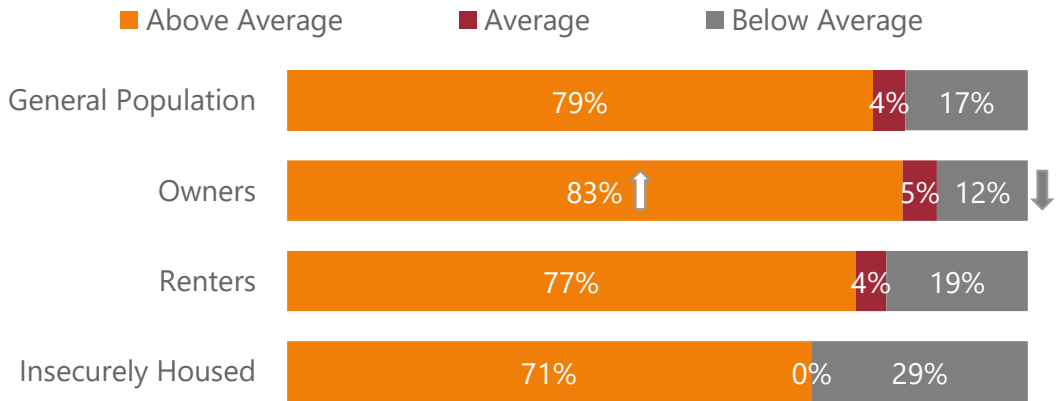

The insecurely housed are *more likely* to believe the effect of the internet and technology is totally beneficial to themselves and their children, and to society, compared to renters and owners.

	Impact is TOTALLY beneficial.... to you/your family...	to society
General Population	19%	9%
Owners	18%	8%
Renters	19%	9%
Insecurely Housed	46%↑	34%↑

Digital Skills

Home owners are *more likely* to have most basic digital skills compared to renters and those who are insecurely housed, including sending/opening a photo and buying items or services online.

↑ = Sig. Higher than at Least One Other Group Shown
↓ = Sig. Lower than at Least One Other Group Shown

Summary Highlights: Single Family Residence vs. MDU

Seattle residents largely have the same likelihood of having home internet connections regardless of the type of home they live in. However, those living in MDUs (especially larger MDUs) are less likely to have fixed broadband subscriptions, have fewer types of devices, have less than adequate internet, and are more likely to be impacted by barriers that limit internet usage.

Internet / Device Access

Regardless of single family home or MDU, similar proportions have internet access at home.

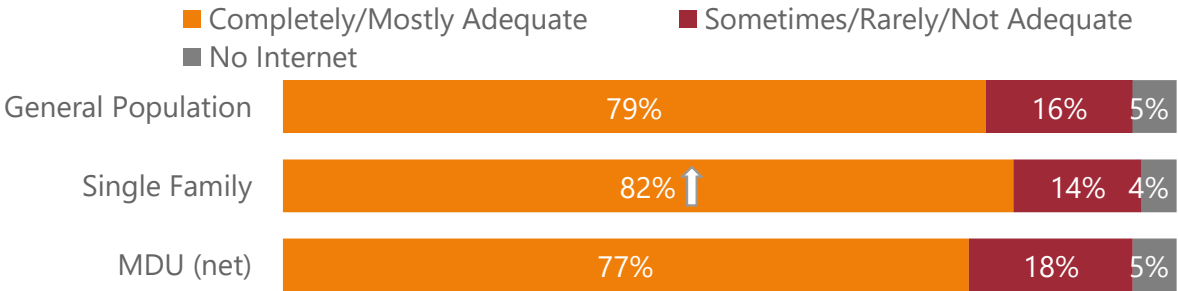

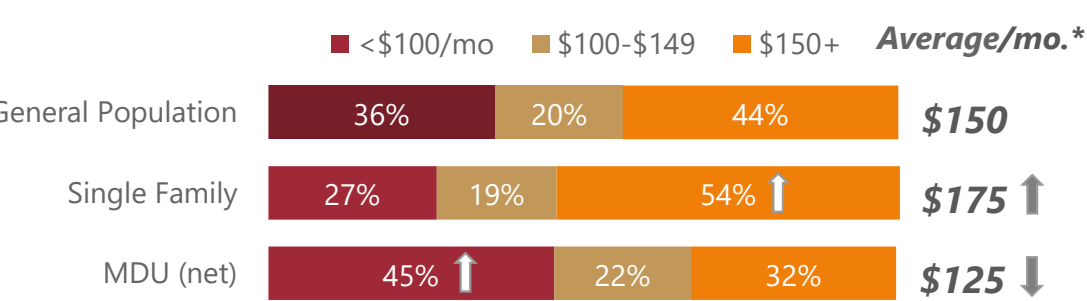

Single family dwellers are *more likely* to have fixed broadband subscriptions (91%, vs. 86% MDUs), while MDUs are more likely to rely on cellular data plans (5%, vs. 3% single family) and not other subscriptions (4%, vs 2%).

Those residing in single family homes or smaller MDUs (1-10 units) *own more* types of devices, on average (3.6 and 3.2).

Internet Spend and Adequacy

Those residing in single family home spend about 40% *more per month* on internet related services compared to those living in MDUs (regardless of the number of units). Among MDU residents, those in smaller MDUs (1-10 units) pay the *most per month*. Most residents have adequate internet access, but those living in single family homes are more likely to have adequate internet service.

*Average/mo. by MDU – 1-10 Units: \$143, 11-50 Units: \$122, 50+ Units: \$114

↑ = Sig. Higher than at Least One Other Group Shown
↓ = Sig. Lower than at Least One Other Group Shown

Summary Highlights: Single Family Residence vs. MDU

Barriers to Internet Use

Residents of MDUs are *more likely* to have barriers to using the internet more, especially those who live in buildings with more units.

While price is the largest barrier to use among all Seattle residents, it is more of a factor for those residing in MDUs.

Those in single family homes are *more likely* to cite not having an interest or a need to use the internet.

Interest in Training Topics

Residents of single family homes are *more likely* to be interested in training for protecting themselves and their data online, while those living in MDUs (especially smaller MDUs) are more likely to be interested in training for using advanced software. Those living in larger MDUs are *least likely* to want to learn to create their own content.

	Gen Pop	Single Family	MDU (net)	1-10 Units	11-50 Units	51+ Units
Protecting yourself and your data online	71%	74%↑	69%	71%	70%	68%
Using advanced software (e.g. coding, design, video editing)	54%	52%	57%↑	62%↑	61%↑	49%
Learning to create, edit, and publish my own work	47%	45%	48%	51%↑	52%	41%↓

	Gen Pop	Single Family	MDU (net)	1-10 Units	11-50 Units	51+ Units
Have ANY barriers to internet use	23%	18%	23%↑	20%	24%	25%↑
Among those with any barriers...						
Internet service is too expensive	57%	50%	63%↑	61%	65%	63%
Not interested/don't need or want to use	18%	27%↑	14%	13%	14%	15%

Impact of Internet/Technology on Themselves and Society

Those living in medium to larger MDUs (11 or more units) are *more likely* to believe technology is beneficial to themselves and their children, or to society in general.

Impact is TOTALLY or MOSTLY beneficial....		
	to you/your family...	to society
General Population	68%	42%
Single Family	66%	40%
MDU (net)	70%	44%
1 – 10 Units	61%	35%
11 – 50 Units	76%↑	47%↑
51 or more Units	72%↑	48%↑

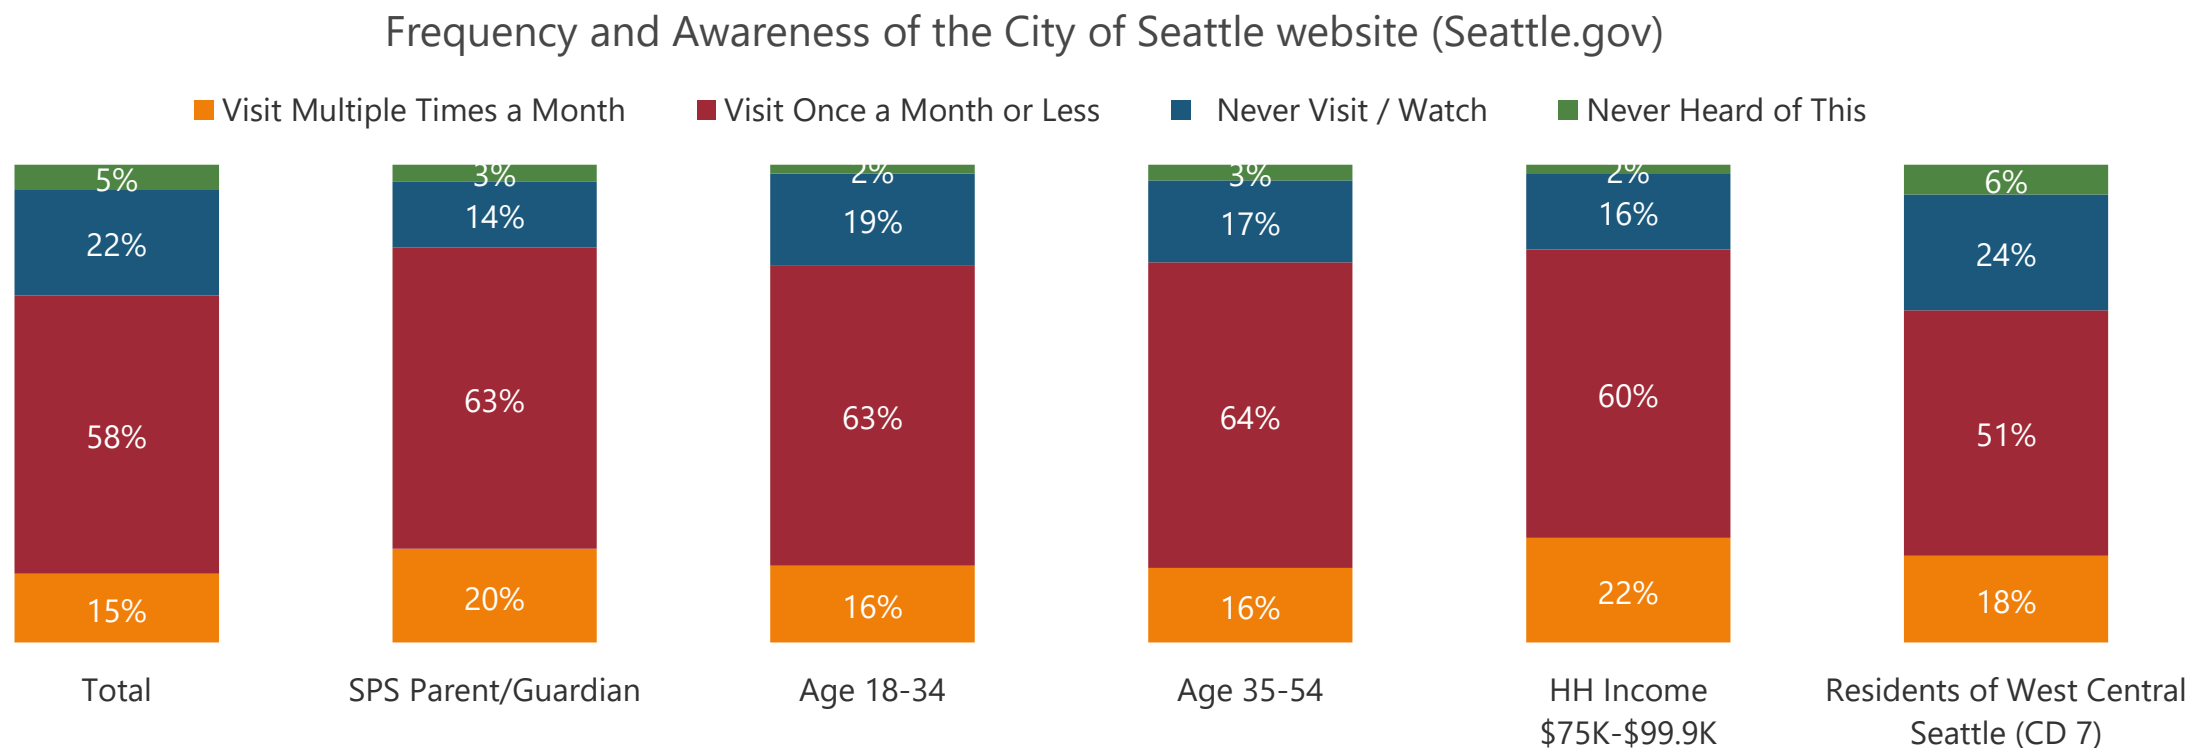

↑ = Sig. Higher than at Least One Other Group Shown ↓ = Sig. Lower than at Least One Other Group Shown

Civic Engagement

- Frequency and Awareness of the City of Seattle website (Seattle.gov)
- Frequency and Awareness of the Seattle Channel (Cable 21 or Online)
- Participation in Community Groups
- Communication Preferences with Community Groups

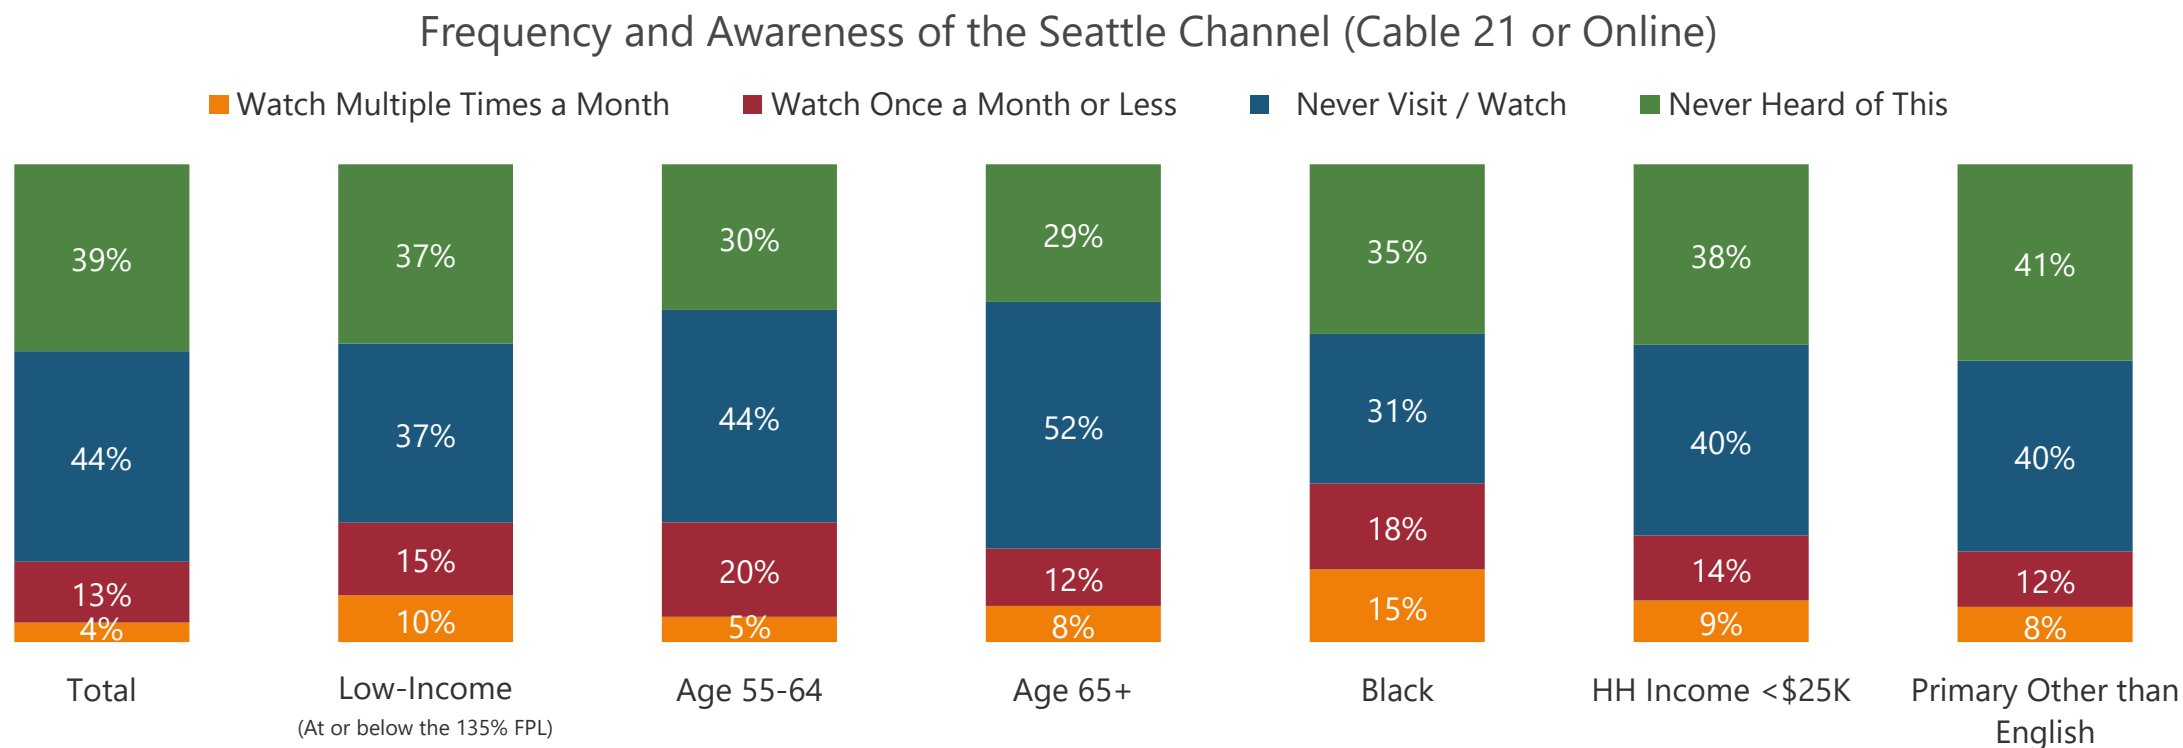

Nearly three quarters (73%) have visited Seattle.gov (up from 67% in 2013); but few visit often (15% visit multiple times per month, up from 8% from 2013).

Segments that over index for multiple visits a month include SPS parents/guardians, those under age 55, those with household incomes between \$75K and \$100K, and residents of Council District 7.

Only one in six have ever watched the Seattle Channel (down significantly from 51% in 2013), and even fewer watch often (4% watch multiple times per month, down from 11% in 2013).

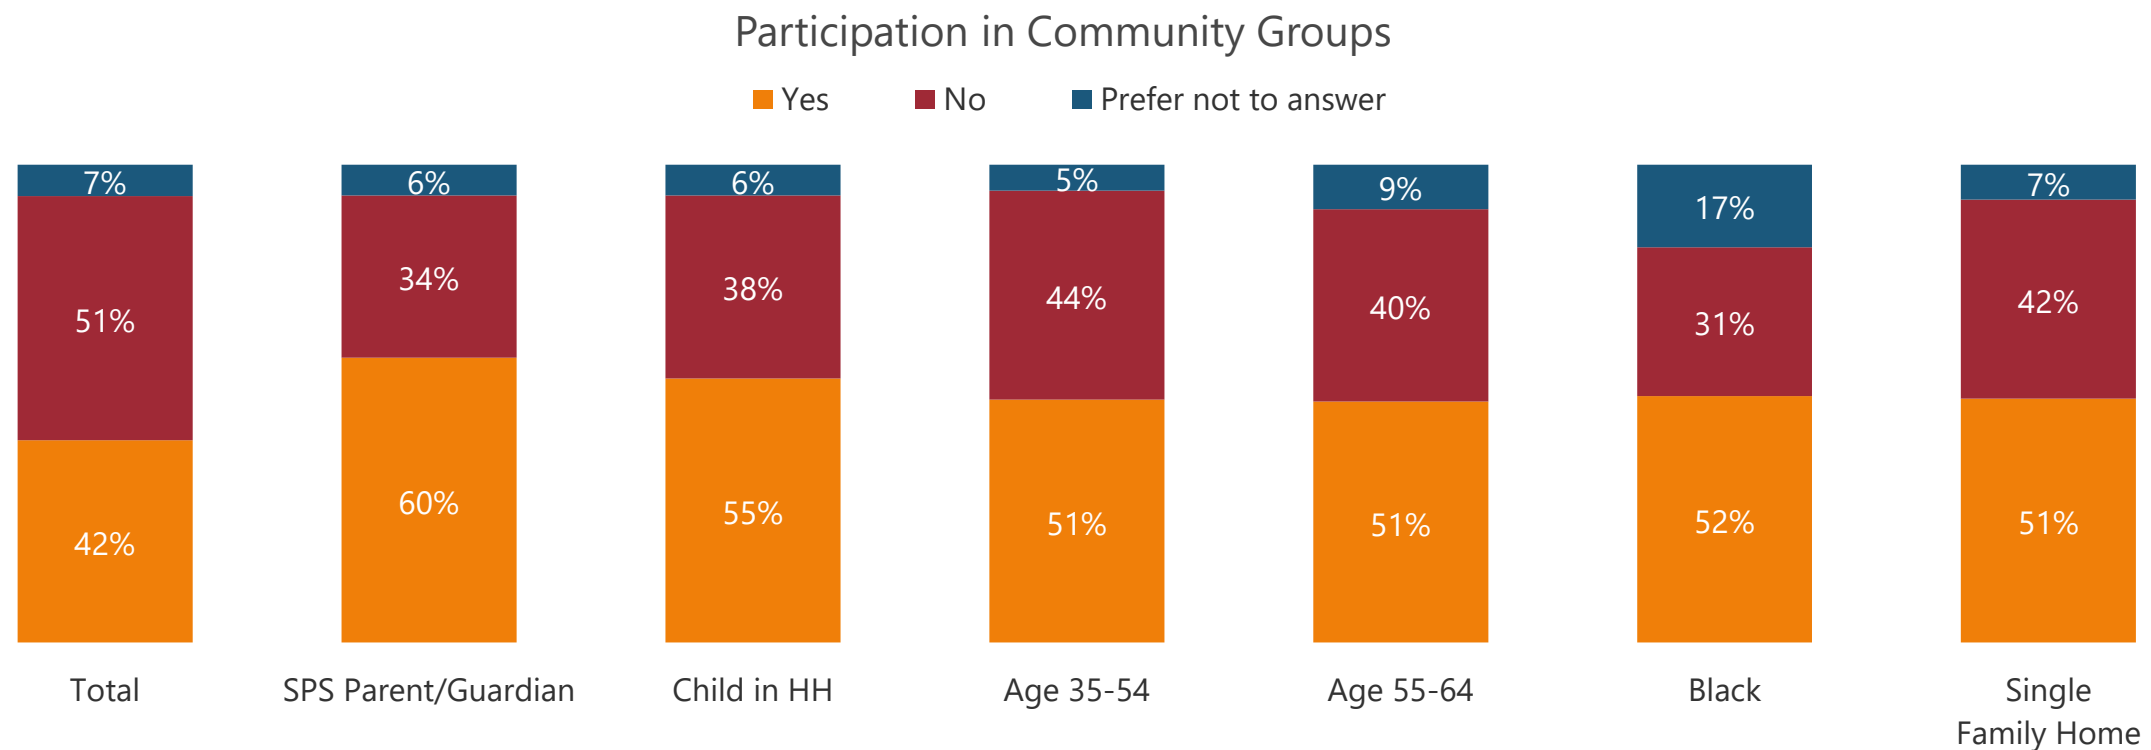

Segments that over index for watching multiple times a month include low income households (HHs) (135% FPL), those age 55 and older, Black residents, and those whose primary language is other than English.

Base: Total Answering – Total (n4216), Low Income (n388), Age 55-64 (n634), Age 65+ (n862), Black (n157), HH Income <\$25K (n578), Primary Language Other than English (n221). Individual Weight.
Q23-2- How often do you watch - The Seattle Channel on Cable 21 or online at seattlechannel.org?

Around two in five residents (42%) are part of a community group.

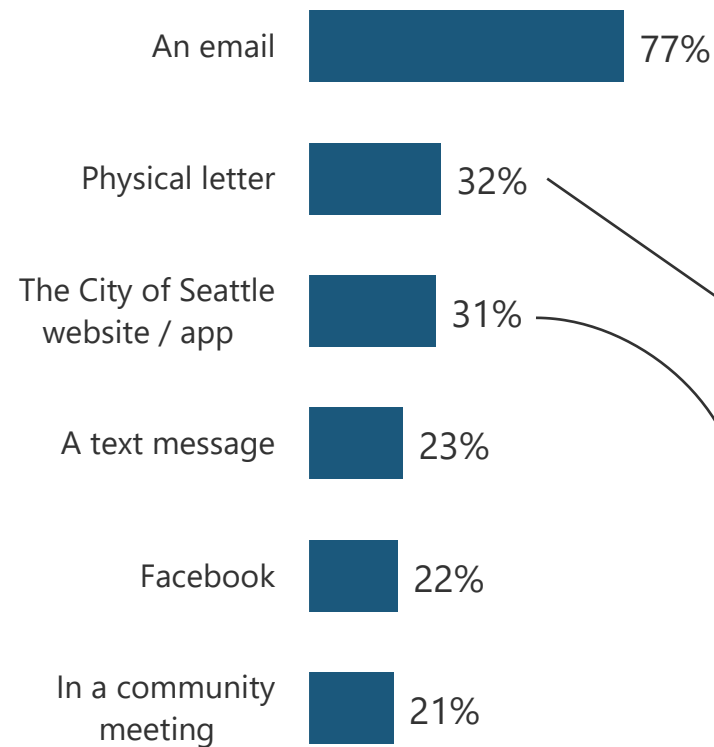

Segments that over index for community group participation include SPS parents/guardians, those with a child in the home, the middle aged (ages 35-64), Black residents, and those living in a single family home.

Base: Total Answering – Total (n4086), SPS Parents/Guardians (n666), Child in Household (n1417), Age 35-54 (n1478), Age 55-64 (n606), Black (n144), Live in Single Family Home (n2374). Individual Weight.
Q24 - Do you participate in any type of community group, like a neighborhood association, block watch, school, religious group, or other?

When it comes to communicating with a group or the city, electronic communication is more preferred than physical communication, with over three quarters mentioning email as a preferred method.

Communication Preferences with Community Groups (Among Total)

Emails are *preferred less* by those whose primary language is other than English, those with household income under \$25K, Black residents, those living in SHA buildings, and those with less than a high school education.

	Total	Other than English	Income <\$25K	Black	SHA Housing	Less than High School
Email	77%	54%	53%	51%	49%	30%

Physical letters are *preferred more* by those living in SHA buildings, older adults, Asian residents, those with less than a high school education, those with household income under \$25K, residents of District 2, living alone and whose primary language other than English.

	Total	SHA Housing	Age 65+	Asian	Income <\$25K	Less than High School	CD#2 (South Seattle)	Living Alone	Other than English
Physical Letters	32%	50%	47%	42%	43%	40%	39%	39%	39%

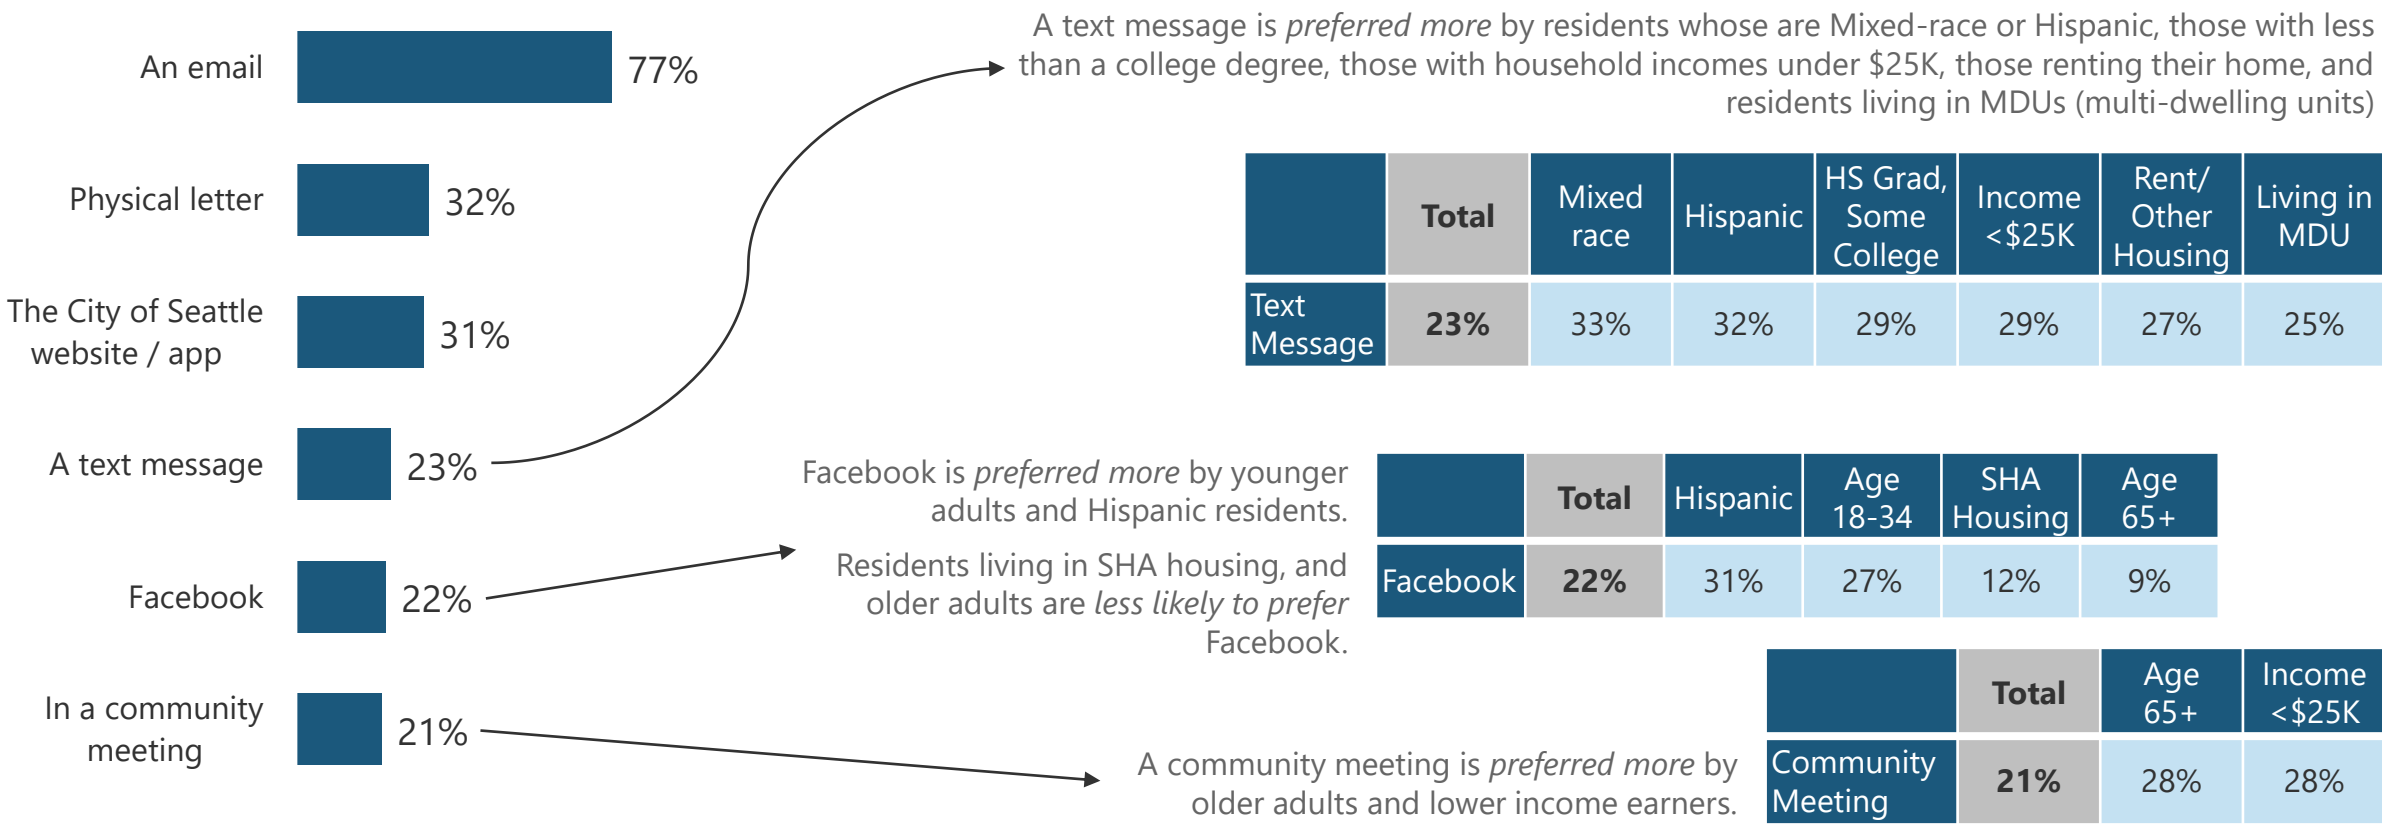

The city website/app is *preferred more* by younger adults, high income earners, and college graduates.

	Total	Income \$150K+	Age 18-34	College Grad
City Website/App	31%	39%	37%	36%

Base: Total Answering – Total (n4081), SHA Buildings (n241), Age 18-34 (n605), Age 65+ (n817), Asian (n379), Black (n150), HH Income <\$25K (n553), HH Income \$150K+ (n881), Less than HS Education (n59), College graduate (n2964), Primary Language Other than English (n210), Council District 2 (n572), Living Alone (n1054). Individual Weight. Q25 - What are your preferred methods of communication when it comes to receiving information or giving an opinion to a community group or to the City of Seattle?

Text messages, Facebook, and community meetings are less popular ways of communicating with the City and community groups; however, each are still preferred by about one out of five residents.

Communication Preferences with Community Groups (cont'd.)
(Among Total)

Council District Comparisons

Demographics

The gender mix of residents and the average number of years they have resided in Seattle did not vary significantly across Council Districts.

The age of respondents is similar across Districts, but some differences include Central Seattle (CD 3) being younger and West Central Seattle (CD 7) being older.

	Total	Council District 1	Council District 2	Council District 3	Council District 4	Council District 5	Council District 6	Council District 7

↑ = Sig. Higher than Total (General Population) ↓ = Sig. Lower than Total (General Population)

NE, NW, and West Central Seattle (CDs 4, 6 and 7) have a higher percentage of residents with household incomes of \$150,000 or more.

In line with the higher household income, those living in West, NE and NW Seattle (CDs 1, 4 and 6) have a smaller percentage of their population living at or below 135% of the federal poverty level, while South Seattle (CD 2) is more likely to have members living at this level.

South and North Seattle (CDs 2 and 5) are more likely to have members with an impairment that makes it difficult to use technology or the internet. NE and NW Seattle (CDs 4 and 6) have the fewest members with such an impairment.

Segmentation Overview

Eleven percent (11%) of residents have a tangible barrier that restricts digital connectedness.

An additional 57% of the population has at least one factor (which may be financial, skill based, or attitudinal) that limits digital adoption to some degree.

Access Limited
Purposefully Disconnected
Device Limited

Spectrum of Digital Connectedness: Three Major Groups and Eight Detailed Segments

Each segment has a unique identity based on how connected they are to the internet and devices, and on their digital skills and confidence level.

Less Technologically Inclined and Connected
More Technologically Inclined and Connected

Purposefully Disconnected	Access Limited	Device Limited	Digital Skills Limited	Access Stressed	Digitally Cautious	Digitally Connected	Hyper Connected
3% 14,373 residents	4% 24,766 residents	4% 23,773 residents	14% 80,708 residents	18% 103,620 residents	24% 136,769 residents	13% 74,398 residents	19% 108,169 residents
Lack internet at home because they “don’t need or want the internet,” “don’t trust the internet,” or “don’t believe it is important or useful.”	Believe the internet is important but do not have access where they live or rely on limited access including limited cellular data plans or free/public internet only.	Have access to the internet where they live, but use borrowed devices or may only own one device in the household. Technology/the internet is not central to their lives.	Lack necessary skills to access and use the internet independently and confidently.	Have access and the skills needed, but are frustrated by the speed and cost of their connection, as well as the service from their provider.	Technologically savvy and adept, with adequate connections, but affected by worry about privacy/data security and lack of trust of internet companies.	Have adequate access and the skills needed to actively utilize the internet. They also have all the devices and appropriate connections to reliably use the internet every day.	Use the internet independently. Technology is “extremely important” to them. They have faster connections, unlimited data plans, and use a variety of devices throughout their daily lives.
129,247 are limited by barriers related to access, devices, or skills				103,620 are limited by cost concerns	136,769 are impacted by data security concerns		

Barriers and Potential Strategies for Segments

- Access Limited
- Device Limited
- Digital Skills Limited
- Access Stressed
- Digitally Cautious

Access Limited

Size: 1 out of 25 (4%)

Who are they? Access Limited individuals want to have the internet, but either do not have access where they live (54%), rely on free access only (30%), or rely on limited cellular data plans (16%).

Demographics: Three out of five are women and the majority live alone. Most are renters and seven out of ten live in multi-dwelling units (MDUs). One out of three are living in a household where they or another member is impacted by a disability that makes it difficult to use technology. The majority of this segment are non-white, and this is a low income segment (nearly seven out of ten have household annual incomes of less than \$25,000).

What are their barriers? They believe internet service is too expensive and this is the main reason why they do not have the internet where they live and do not use the internet more (if they have internet). Around one out of four are aware of programs like Comcast Internet and Century Link Internet Basics, but few have used them (Lifeline Phone Discount is the most used at 8%). More than half (53%) visit libraries or community centers to access the internet. For those that do have internet, slow speeds are a major frustration that keeps them from doing all the things they need to do online.

Potential Strategies: Interventions to address needs for less expensive and faster internet would move most past the “Device Limited” segment (the majority are not facing device limitations) and into “Digital Skills Limited” or “Access Stressed” where they would need a different intervention strategy to increase their digital engagement.

Where else do they fit?

Cross Segment Comparison: Access Limited

Device Limited
36%

Digital Skills Limited
58%

Access Stressed
62%

Digitally Cautious
54%

Device Limited

Size: 1 out of 25 (4%)

Who are they? Device Limited individuals all own ONE or ZERO types of devices. For those that own no devices, they are all using borrowed devices (10% of this segment is given or borrows all devices).

Demographics: Most live alone and few have children in the home. More than half are renters and two thirds live in MDUs. They tend to be older – three out of five are age 60 or older. Just over half of this segment are non-white, and they are more than twice as likely than the average resident to not speak English as their primary language. Half of households incomes are less than \$25K.

Access trends: While most (86%) use their device to access the internet at home, more than a third (37%) use their devices to access the internet at a library or other public/free area). About one-in-four are aware of low income programs with 9% currently using Comcast Internet Essentials.

What are their barriers? They want lower cost internet at home, but many also lack the skills to use the internet fully. Many are worried about how they will continue to afford devices and keep up with the changing technological world. They do not see themselves as confident or savvy technology consumers. Their use of internet centers around basic needs (sending/reading email).

Potential Strategies: Simply providing devices is not a long term solution for this group as two out of three (68%) would still be impacted by their lack of skills. Focus should be placed on improving their computer skills, particularly on increasing their confidence in technology and device purchase and adoption as well as other digital skill building programs. Increasing awareness of low cost internet services for the limited income is also an opportunity for this group.

Where else do they fit?

Cross Segment Comparison: Device Limited

Digital Skills Limited

Size: 1 out of 7 (14%)

Who are they? Digital Skills Limited individuals mostly rely on others to access and use the internet – fully two thirds do so. They are the segment most likely to say they have a hard time learning how to use new technology devices and software programs, are more likely to prefer “basic models” when it comes to technology, and tend to lack confidence in using the internet.

Demographics: They tend to be middle aged or older, and when compared to the population, are more likely to be: Asian or Black. They have less household income than average (but not as low as the Access or Device Limited), are less educated than more connected segments, and are somewhat more likely to speak a language other than English as their primary language. Three out of five are home owners and they live in a mix of single family homes and MDUs.

What are their barriers? Their greatest barrier is lack of skills to use the internet to its greatest potential (67% rely on others), followed by lack of skills to do eight or more common tasks (44%). Half would agree that they have a hard time learning how to use technology, and one third disagree (at least somewhat) that they are very good with using technology and the internet.

Potential Strategies: Given their reliance on others to use the internet, in-person skills training would likely be the most effective path towards increased digital adoption. They are the segment *most interested* in learning about “using basic software” and “setting up/using email”. However, it is important to remember that the majority (71%) would also qualify for the Digital Cautious segment as well, making online data security and privacy a salient topic to this segment as well.

About half (46%) participate in a community group. Senior centers and recreational centers may be beneficial in reaching this group.

Where else do they fit?

Cross Segment Comparison: Digital Skills Limited

↓
Access Stressed
48%

↓
Digitally Cautious
71%

Access Stressed

Size: 1 out of 5.5 (18%)

Who are they? Most Access Stressed individuals worry about affording technology/internet access (83%) and believe internet service is too expensive (63%). They also believe their internet is too slow/frustrating (50%) and service plans are confusing (33%).

Demographics: This group tends to be younger and well educated – two out of three have a college degree, one in four with post-graduate work. Most are employed, but tend to be middle income earners, with an average household income of \$73K. A little over half are renters and nearly three out of five live in MDUs. One in four have children in the household.

Access trends: Most would not qualify for low income internet programs (only 13% are at 135% or below on the FPL).

What are their barriers? Over half would “lower the price” if they could change one thing about their internet plan (56%) – which is average for the city, but they are significantly more likely than the residents’ average to want “faster speeds” (24%). This segment is significantly less likely to feel they have adequate internet speeds to do all of the tasks they want to do online. Access Stressed spend about \$20 less per month on internet services compared to Digitally Cautious (\$141 vs. \$162), which also aligns with their income difference (\$73K for Access Stressed vs. \$110K for Digitally Cautious).

Story: The “Access Stressed” is the “middle income” family. Costs in Seattle are going up across all goods and services; however, at the same time, this group does not qualify for programs and services targeted towards lower income households. They feel they are getting priced out of the fastest and most robust technology and have to make due with what they can afford, which manifests itself as slower internet speeds for less money. On average they spend 3.24% of their annual income on monthly internet related services (significantly more of their total income than more connected groups).

Potential Strategies: Affordable and sustainable internet is this segments’ chief concern. On average, they are paying 25% more of their income for speeds that are comparable or less than their more connected Seattleite counterparts.

Where else do they fit?

Cross Segment Comparison: Access Stressed

↓
Digitally Cautious
62%

Digitally Cautious

Size: 1 out of 4 (24%)

Who are they? The Digitally Cautious worry about their digital privacy and about information they send or receive over the internet.

Demographics: This group tends to be younger and well educated – most hold college degrees; a third have done post graduate work. More than a quarter have children at home and while most of the children attend Seattle Public Schools, this segment is the most likely to have children in private schools. Most are employed, and they tend to be high income earners, with household average of \$110K. Nearly two thirds are home owners – and therefore most are property tax payers.

Access trends: Despite their mistrust of the digital world, this segment is confident using technology devices and they use the internet to a great extent (e.g. 25% bank online every day). Three out of four (77%) would be interested in training on how to protect themselves and their data online. Almost all (98%) are aware of the Seattle.gov website; and 81% have interacted with the City online. Although less than half (43%) are part of a community group, most communicate with that group online.

What are their barriers? Digitally Cautious individuals believe that along with the benefits of technology, there comes some harmful effects. They worry about “digital privacy” and that “information sent online will be seen by others” (nine out of ten worry about these issues), many also are unsure if they should trust the information they read online (72% are unsure) and nearly two out of five do not feel confident doing business with a company that is only online.

Potential Strategies: One way to address the concerns of this segment is by partnering with internet providers to provide online courses and materials in safe internet use practices. Demonstrating an understanding of this segments’ concerns and a commitment to the digital safety and security of the public is vital. Visible alignment with neighborhood and educational organizations (including the Seattle Public Schools) to promote digital security and safety will resonate with this segment. Sharing these efforts and stated commitment through the city communication channels like the website, social media, and cable channels is also important. Consumer advocacy groups and other “watch dog” organizations promoting security and safety online should be heavily promoted.

This group could benefit from additional exploratory research to probe into their concerns about digital access and interaction. This is also the largest segment, so additional research could add more granularity on inherent subsegments within this macro group.

Segment Comparisons

- Digital Access and Devices
- Obtaining Access
- Digital Activities & Skills
- Technology Attitudes

As residents move along the digital spectrum, the frequency of these common online tasks increases dramatically.

Base: Total Answering. Household Weight.

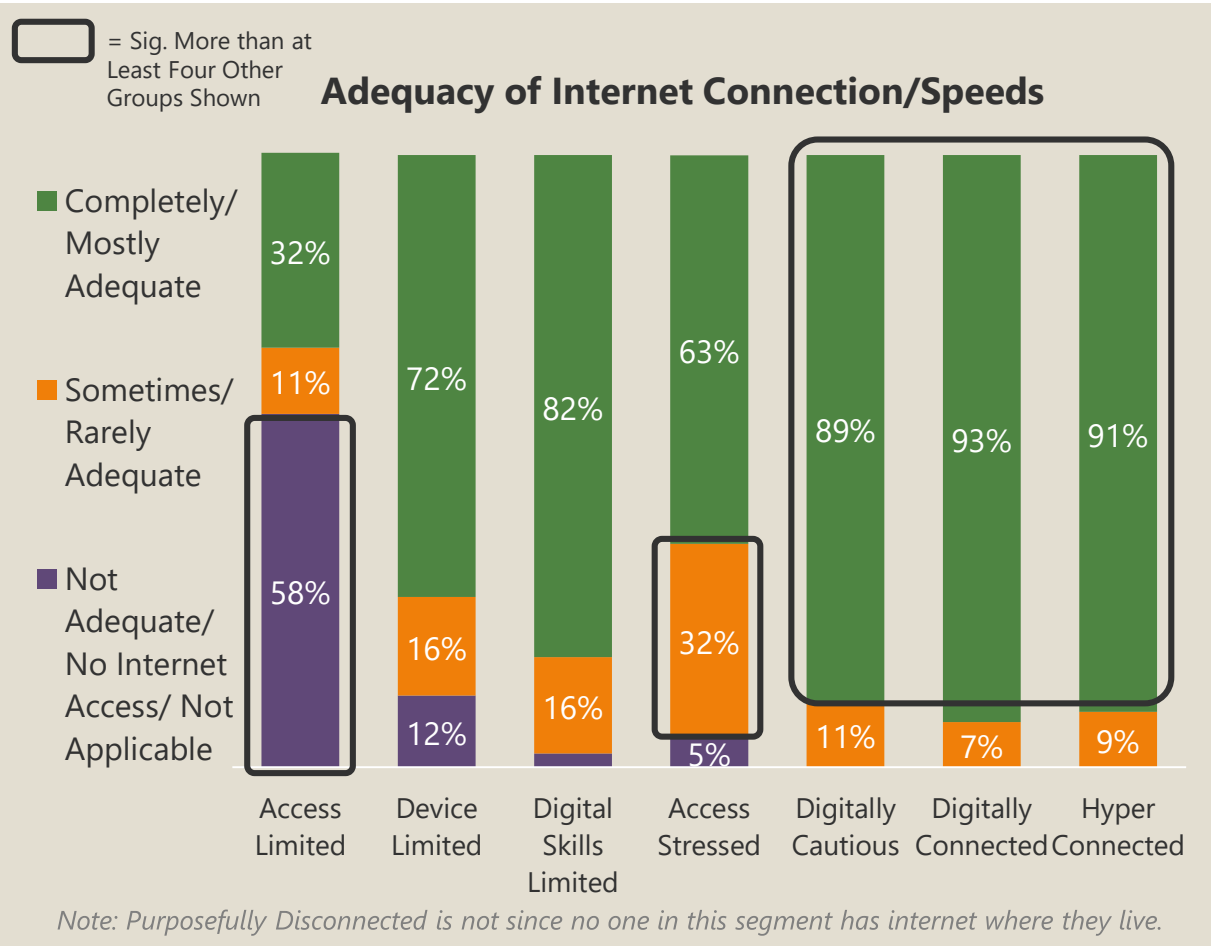

Q16 - How often does anyone in your household engage in the following activities online? (Mean Times Monthly)

Most residents own at least three types of devices in their home.

Those who are Access Limited are less likely to own more than three types of devices. Purposefully Disconnected and Device Limited own the least number of types of devices (based on choice and circumstance respectively).

While most believe their internet to be at adequate, it should be noted that reported speeds increases as individuals move along the digital engagement spectrum.

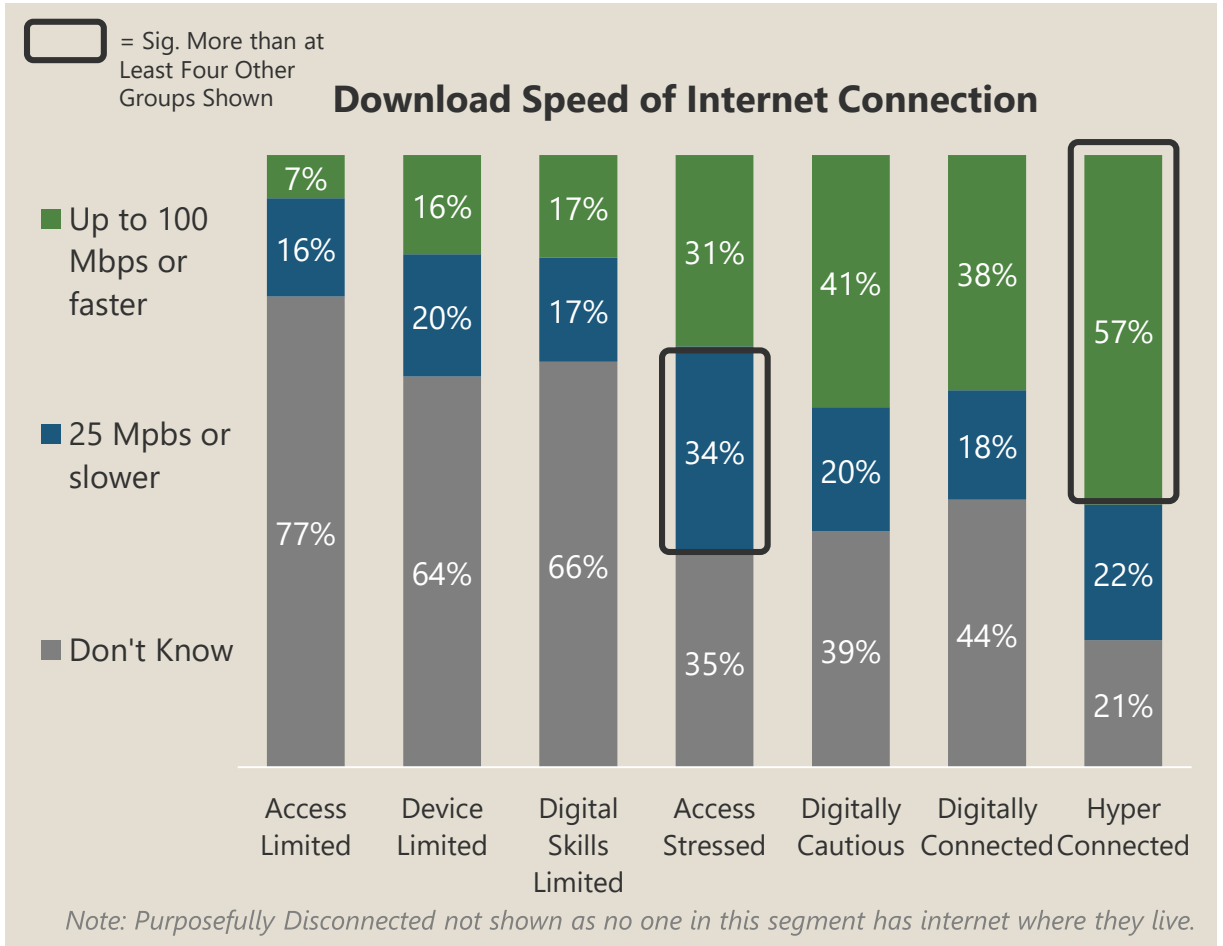

Base: Total Answering With Home Internet. Access Limited (n153), Device Limited (n198), Digital Skills Limited (n735), Access Stressed (n667), Digitally Cautious (n1135), Digitally Connected (n611), Hyper Connected (n606). Household Weight.

Q6 - How would you rate the adequacy of the internet connection and speeds in the place where you live...

Base: Total Answering With Home Internet. Access Limited (n63), Device Limited (n200), Digital Skills Limited (n711), Access Stressed (n656), Digitally Cautious (n1110), Digitally Connected (n606), Hyper Connected (n593). Household Weight.

Q7 - What is the download speed of the internet connection in the place where you live?

Additionally, when residents become more connected, they are also more comfortable performing tasks online.

 = Sig. Less than at Least Four Other Groups Shown

Ensuring the safety and security of my personal information (such as banking or health information)	69%	61%	67%	70%	87%	92%	78%	78%
How my data and information is being used (including ways that you may not be aware of)	55%	57%	67%	69%	83%	89%	76%	74%
Protecting my computer from online viruses and malware	38%	57%	67%	68%	75%	81%	70%	66%
Protecting myself from other individuals online (cyberstalking, cyberbullying)	42%	37%	37%	48%	43%	45%	27%	29%
Protecting my children from other individuals online (cyberstalking, cyberbullying)	19%	14%	15%	23%	28%	28%	26%	21%

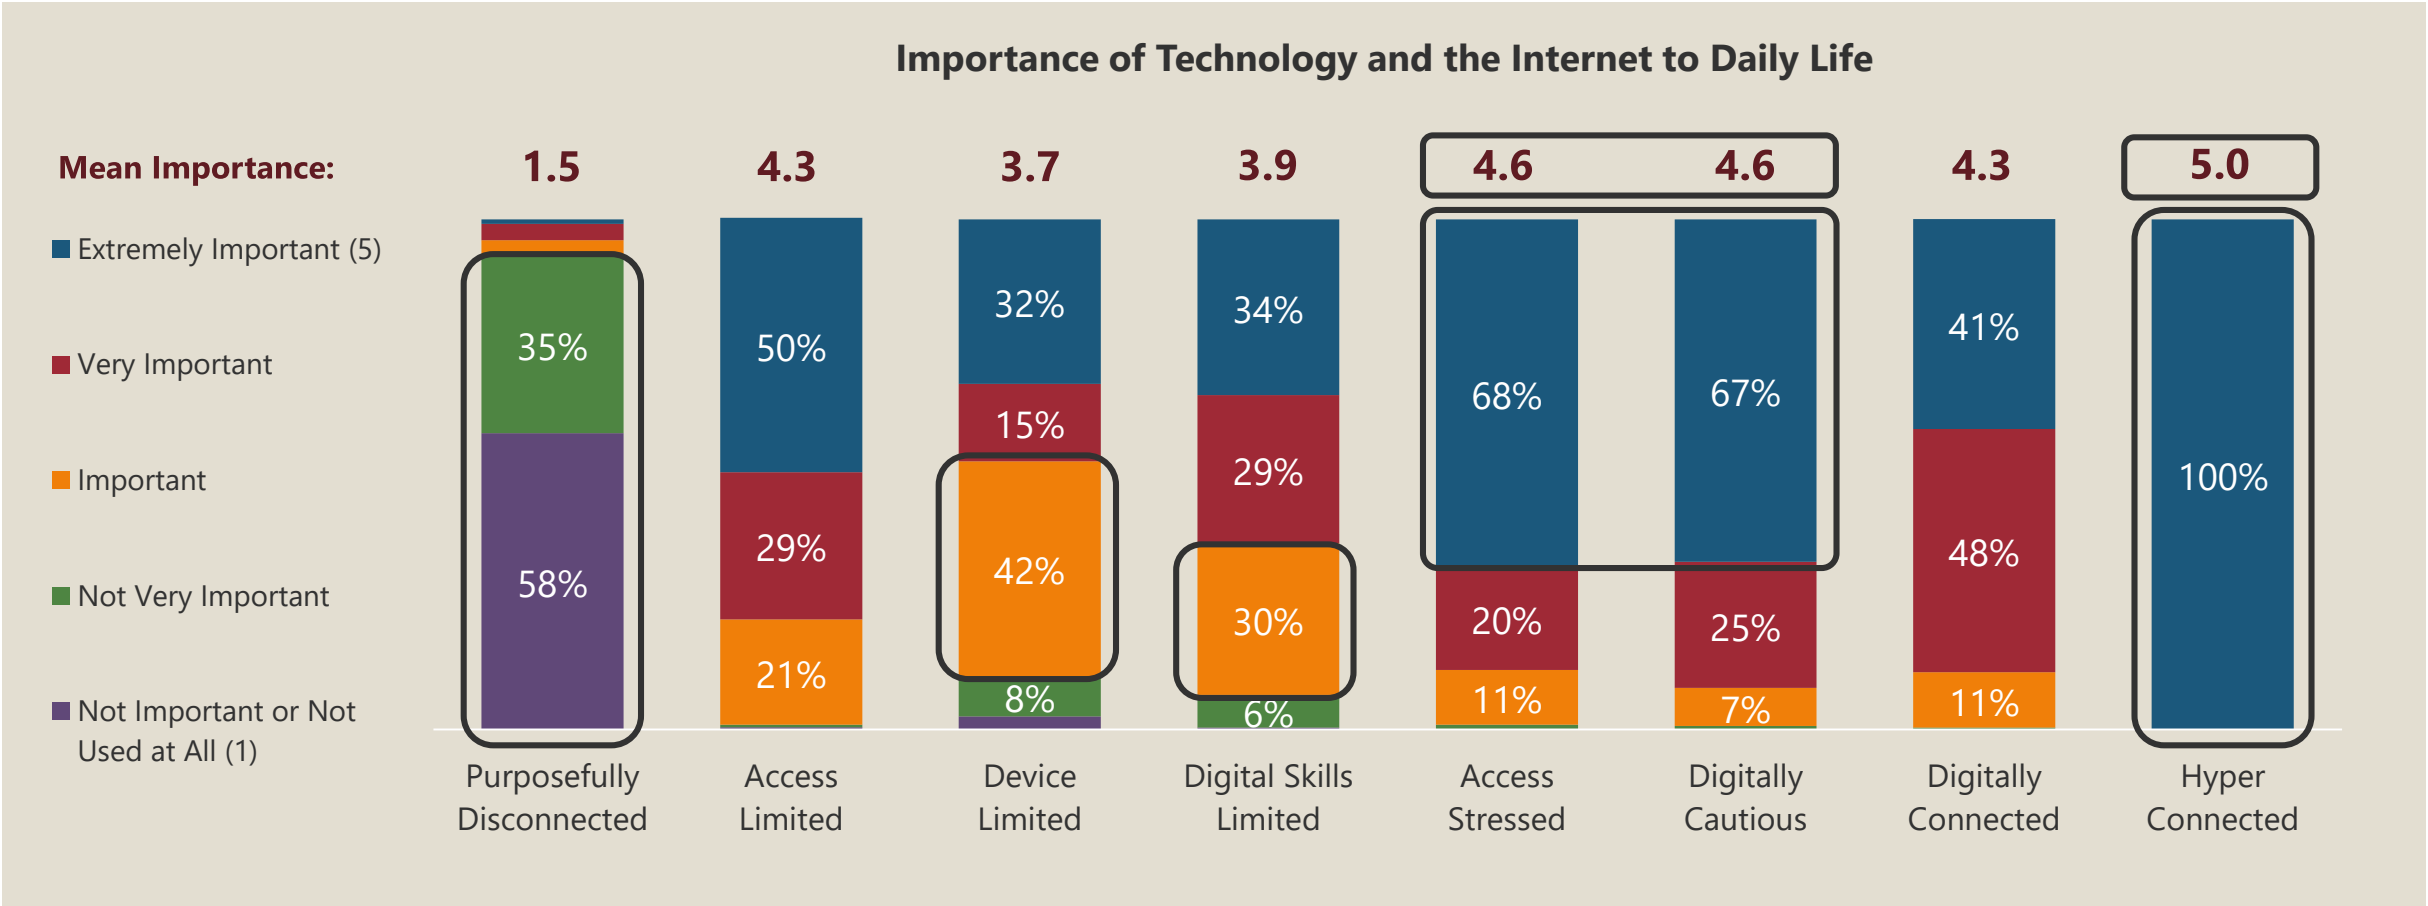

Reliance on others varies among the less engaged segments.

Those in the Digital Skills Limited segment rely on others a great deal; however, one out of three in the Device Limited segment also face digital skills barriers.

As residents become more connected, their endorsement that the internet and technology is important to their daily life increases.

 = Sig. More than at Least Four Other Groups Shown

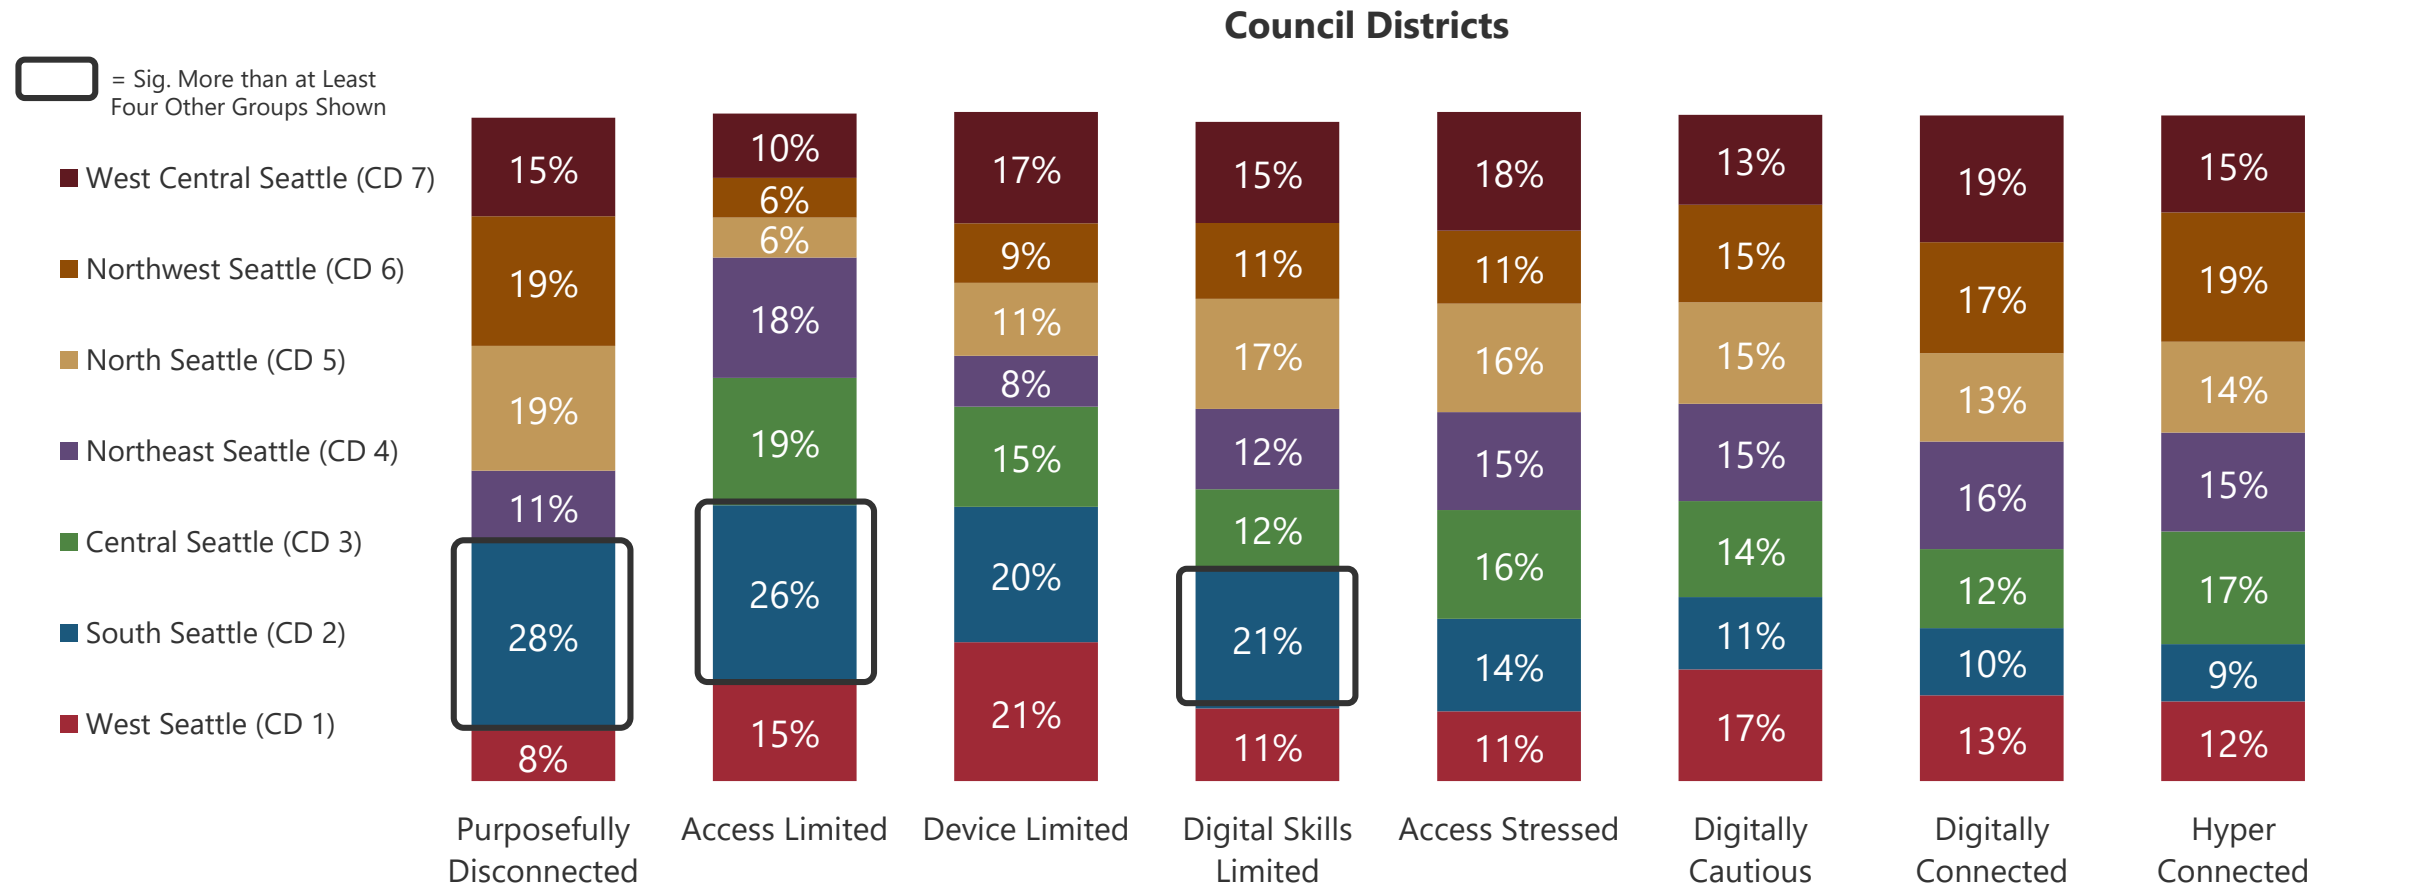

Percentages <4% not labeled on graph.

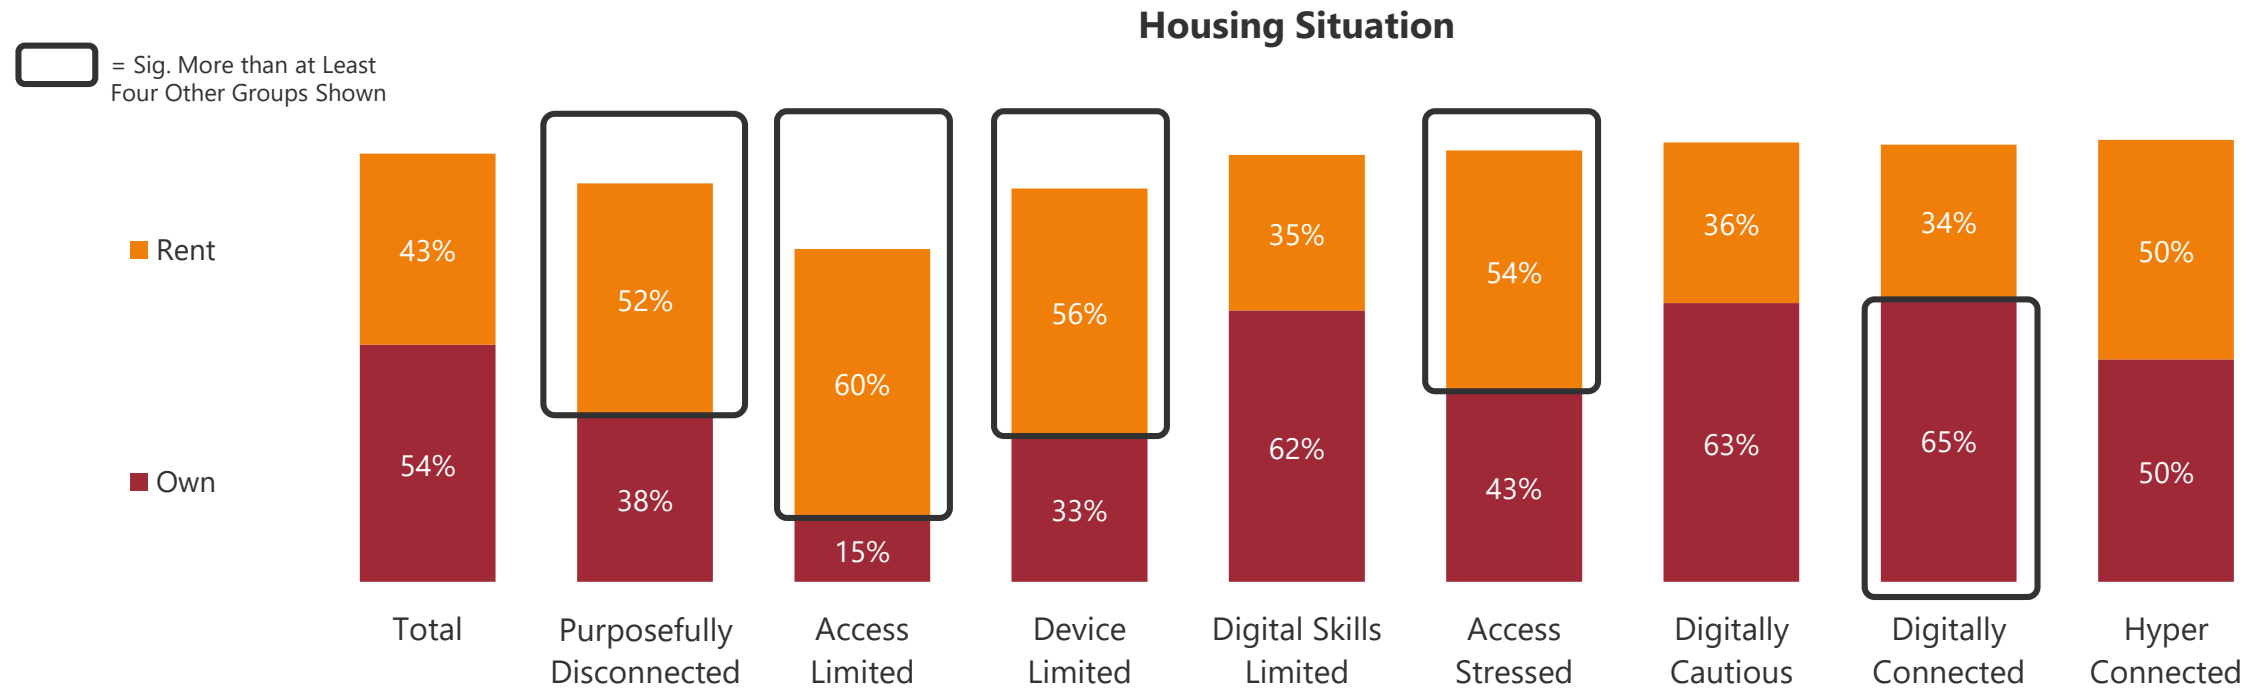

Base: Total Answering. Purposefully Disconnected (n130), Access Limited (n143), Device Limited (n206), Digital Skills Limited (n737), Access Stressed (n668), Digitally Cautious (n1139), Digitally Connected (n603), Hyper Connected (n608). Individual Weight.
Q20 - How important is technology and the internet to your daily life?

Residents of South Seattle (CD 2) stand out for having more members at the less connected end of the spectrum.

Most Districts have similar proportions of Digital Skills Limited, Access Stressed, and Digitally Cautious residents.

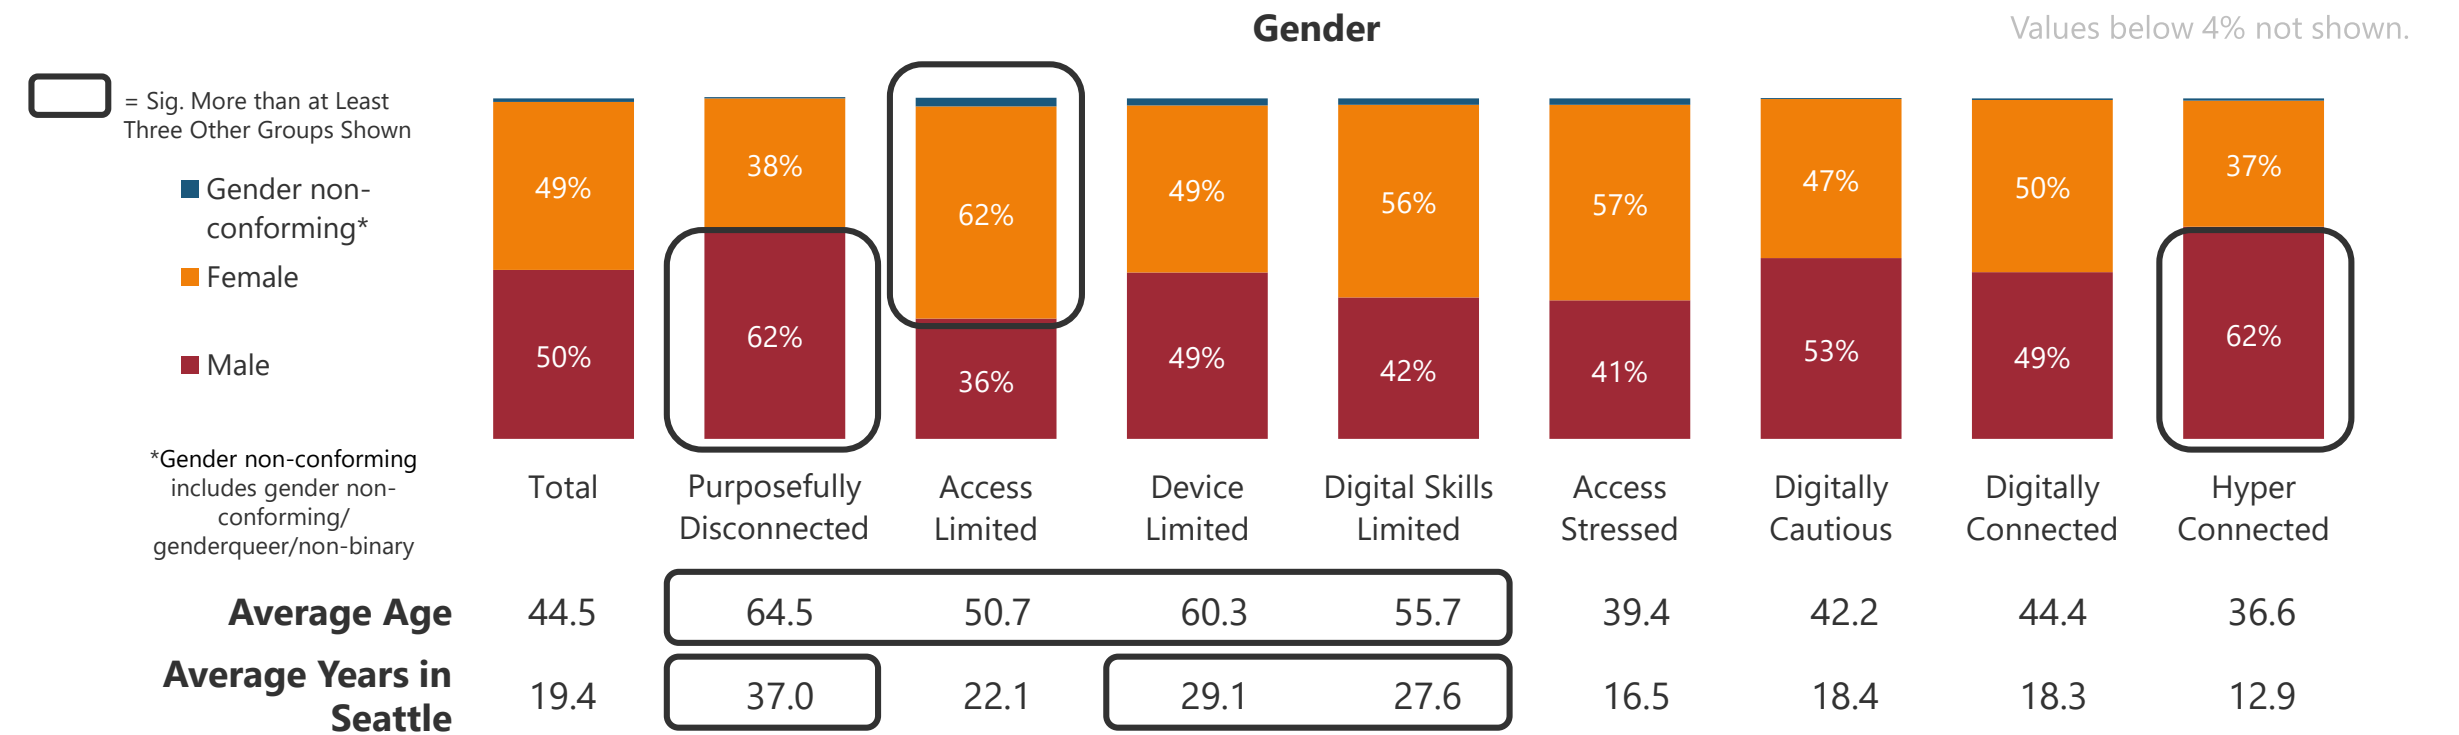

Those in the Digitally Connected segment are more likely to be home owners, while those who are Access Limited, Access Stressed, Device Limited or Purposefully Disconnected are more likely to be renters.

Note: "Other" category (insecurely housed, group homes) not shown.
Base: Total Answering. Total (n4220), Purposefully Disconnected (n124), Access Limited (n150), Device Limited (n208), Digital Skills Limited (n745), Access Stressed (n661), Digitally Cautious (n1124), Digitally Connected (n610), Hyper Connected (n598). Household Weight.
Q33 – Which of the following best describes your current housing situation?

The Purposefully Disconnected and the Hyper Connected are more likely to be male, while the Access Limited are more likely to be female.

Those in the Purposefully Disconnected, Device Limited and Digital Skills Limited segments are more likely to be older and to have lived in Seattle for a longer period of time. The Hyper Connected segment tends to be younger newcomers.

Base: Total Answering. Total (n3657), Purposefully Disconnected (n92), Access Limited (n131), Device Limited (n169), Digital Skills Limited (n591), Access Stressed (n581), Digitally Cautious (n988), Digitally Connected (n543), Hyper Connected (n562). Individual Weight.

Q26B - Thinking about the adults (age 18 and older) living in your household, how old are they?

Base: Total Answering. Total (n4059), Purposefully Disconnected (n116), Access Limited (n135), Device Limited (n198), Digital Skills Limited (n692), Access Stressed (n636), Digitally Cautious (n1096), Digitally Connected (n591), Hyper Connected (n595). Individual Weight.

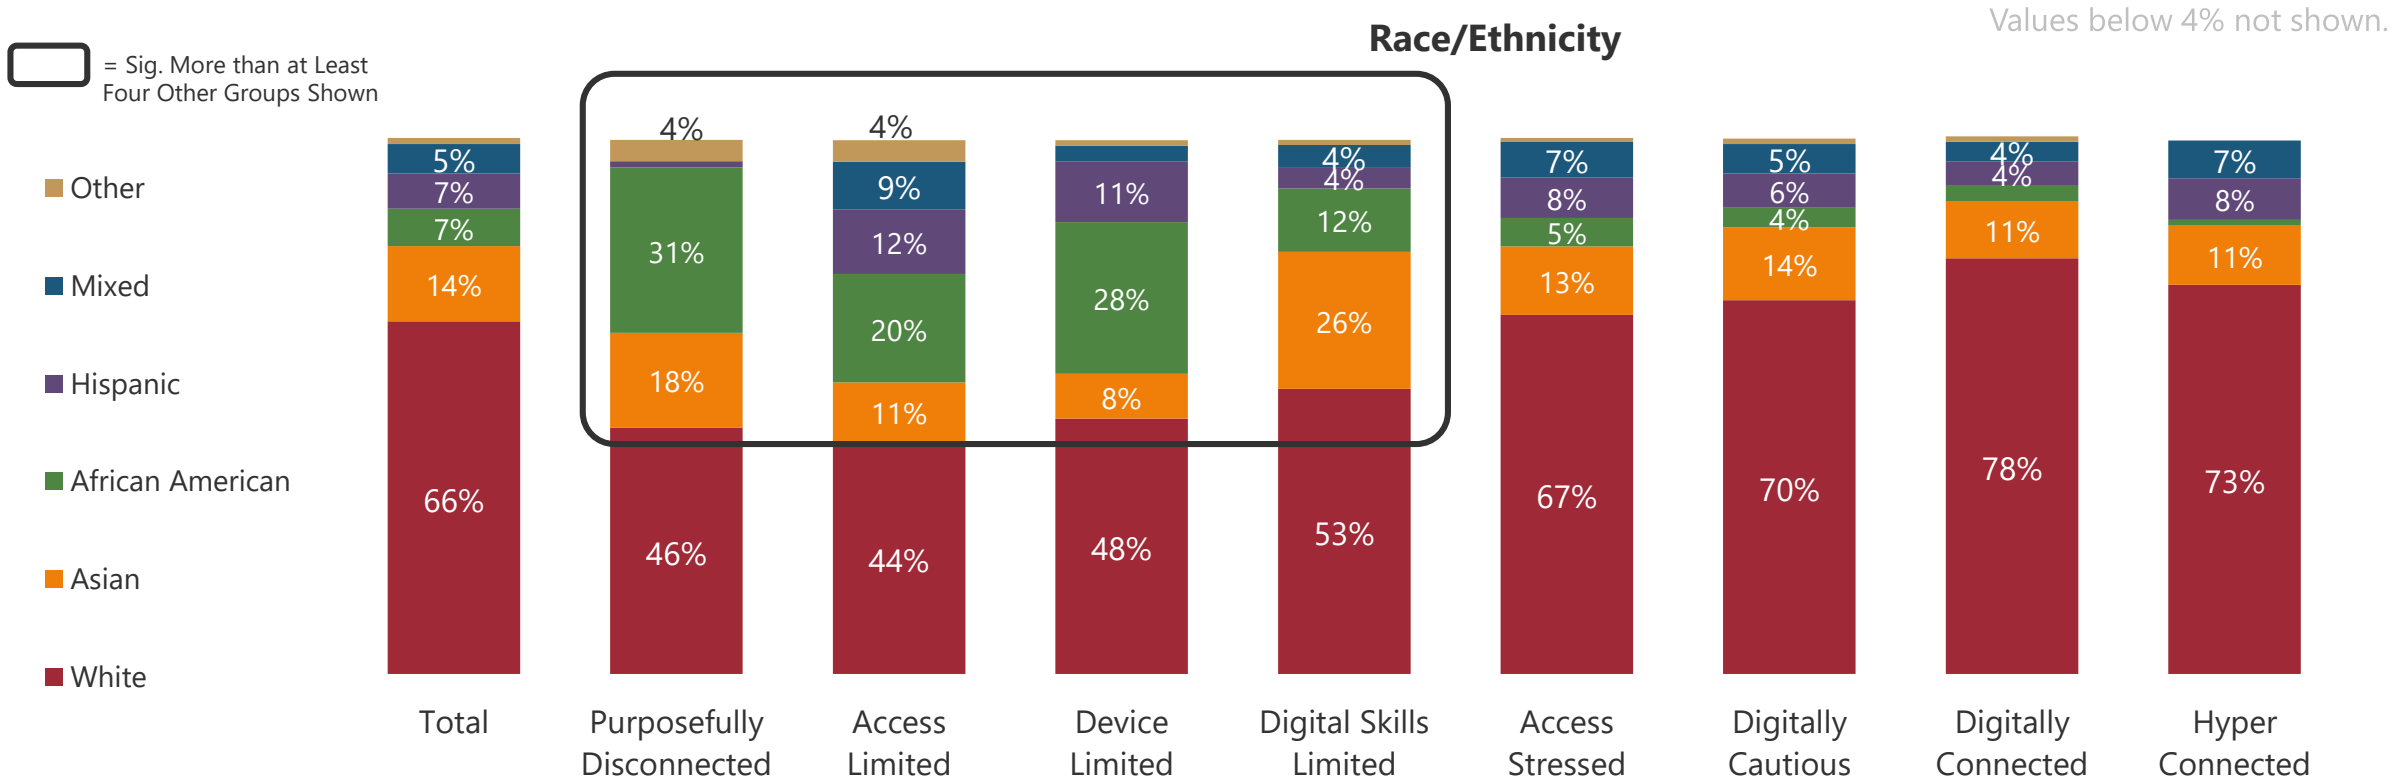

Q28 - With which gender do you most identify?

Base: Total Answering. Total (n4256), Purposefully Disconnected (n125), Access Limited (n152), Device Limited (n211), Digital Skills Limited (n748), Access Stressed (n673), Digitally Cautious (n1134), Digitally Connected (n610), Hyper Connected (n603). Individual Weight.

Q30 - About how long have you lived in Seattle?

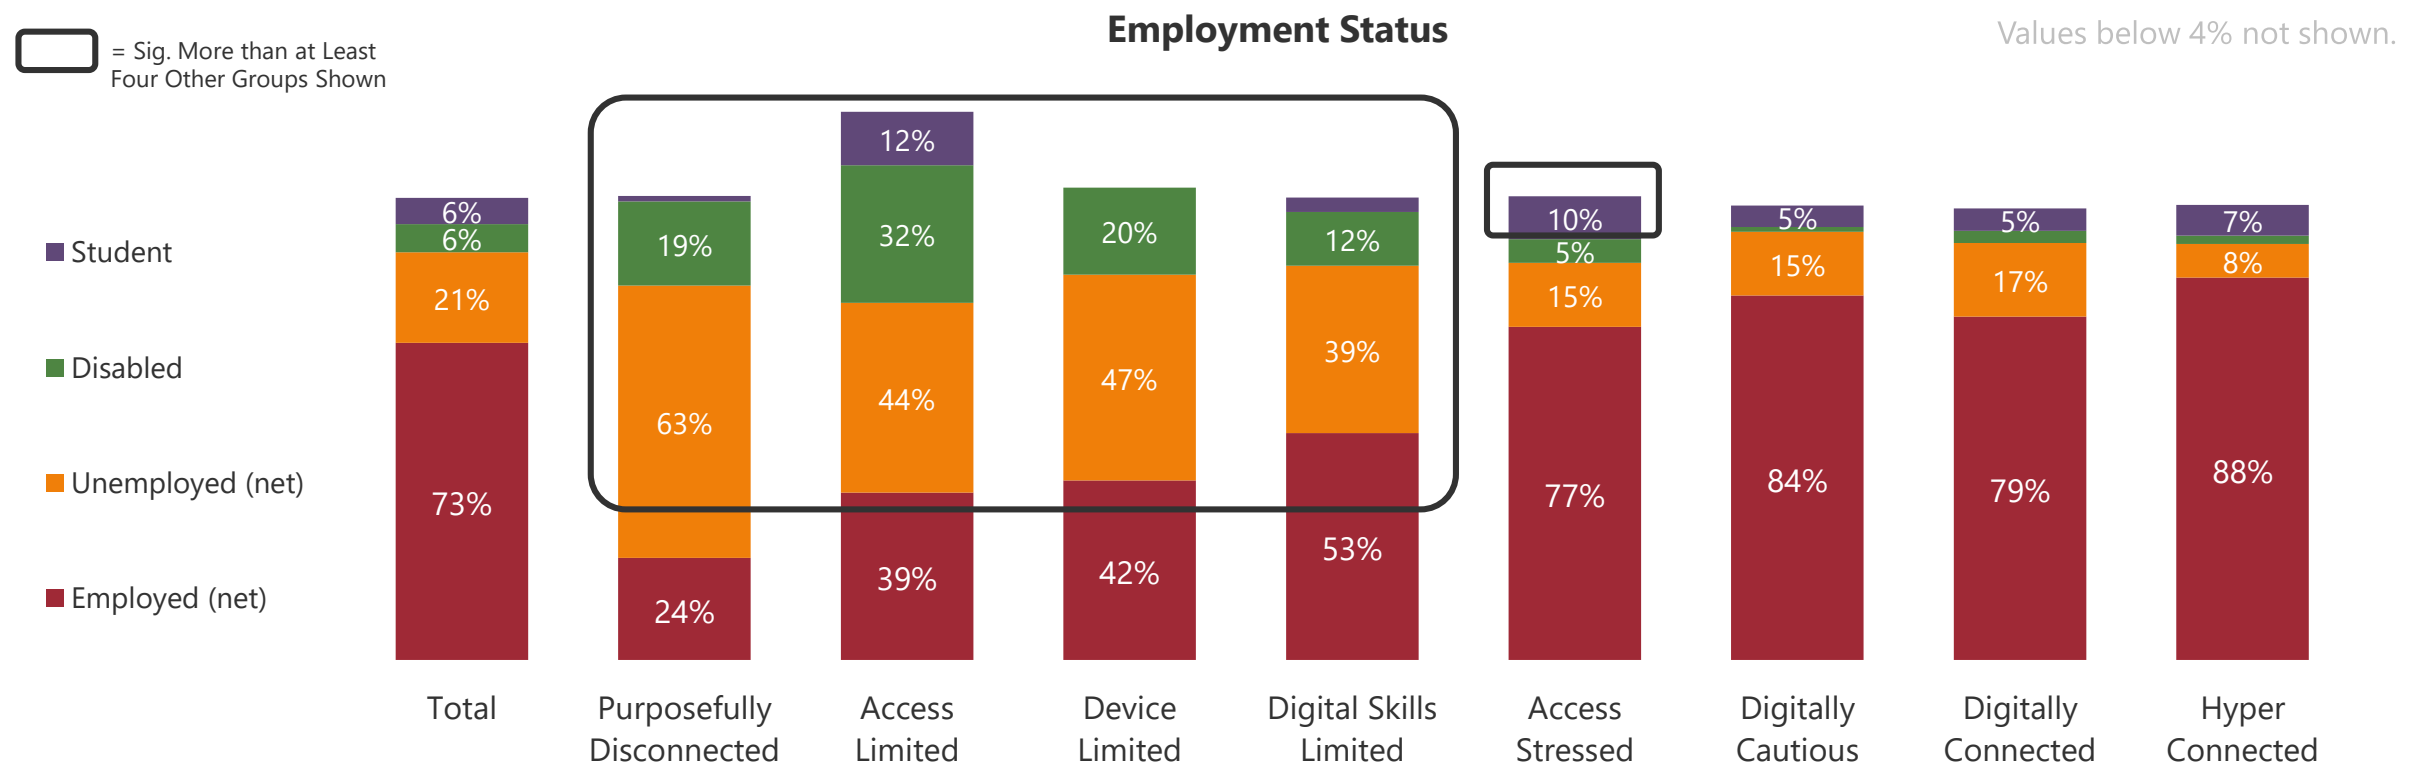

The less connected segments tend to be the most racial/ethnically diverse.

Relative to their size in the general population, a high number of the Purposefully Disconnected and Device Limited segments are African American, a notable portion of the Digital Skills Limited segment are Asian, and Hispanics have their highest presence in the Access Limited and Device Limited segments.

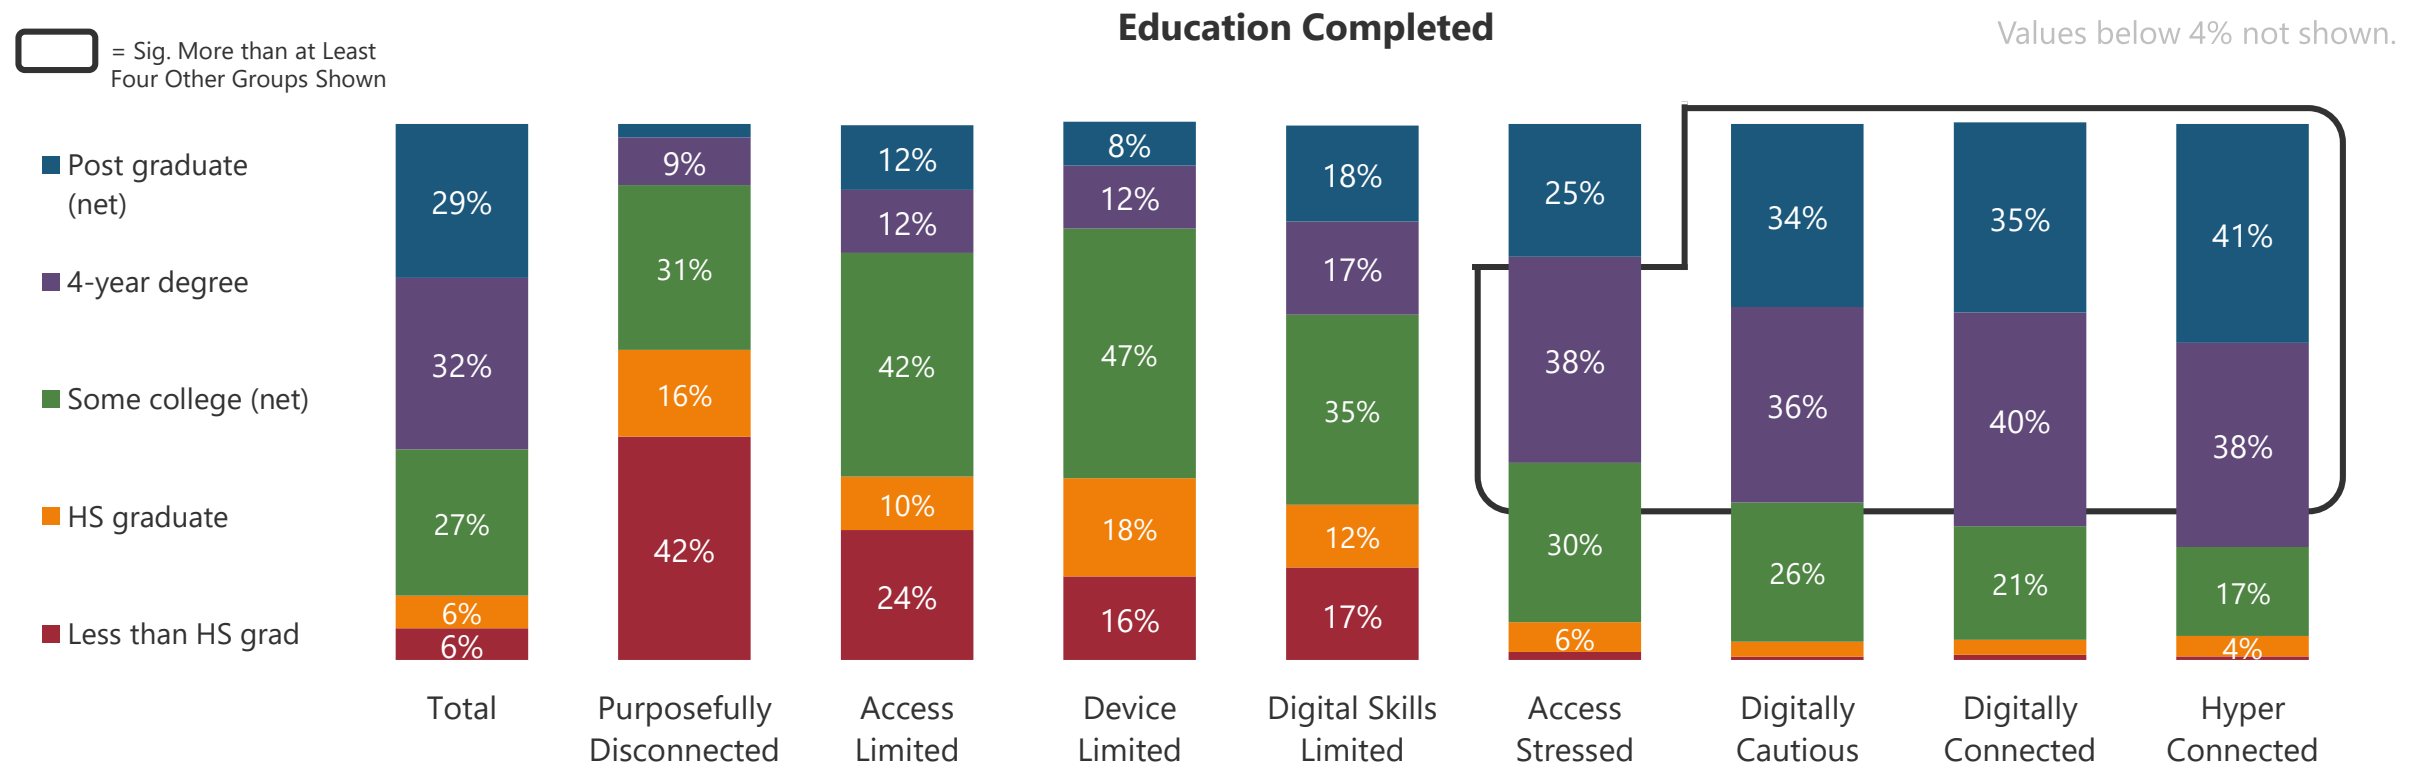

Note: "Other" category includes American Indian/Alaska Native, Native Hawaiian/Pacific Islander, and Other.
Base: Total Answering. Total (n4008), Purposefully Disconnected (n118), Access Limited (n140), Device Limited (n199), Digital Skills Limited (n708), Access Stressed (n661), Digitally Cautious (n1066), Digitally Connected (n586), Hyper Connected (n580). Individual Weight.
Q31 – Are you, yourself, of Hispanic, Latino, or Spanish origin?
Q32 – Which race / ethnicity do you consider yourself to be?

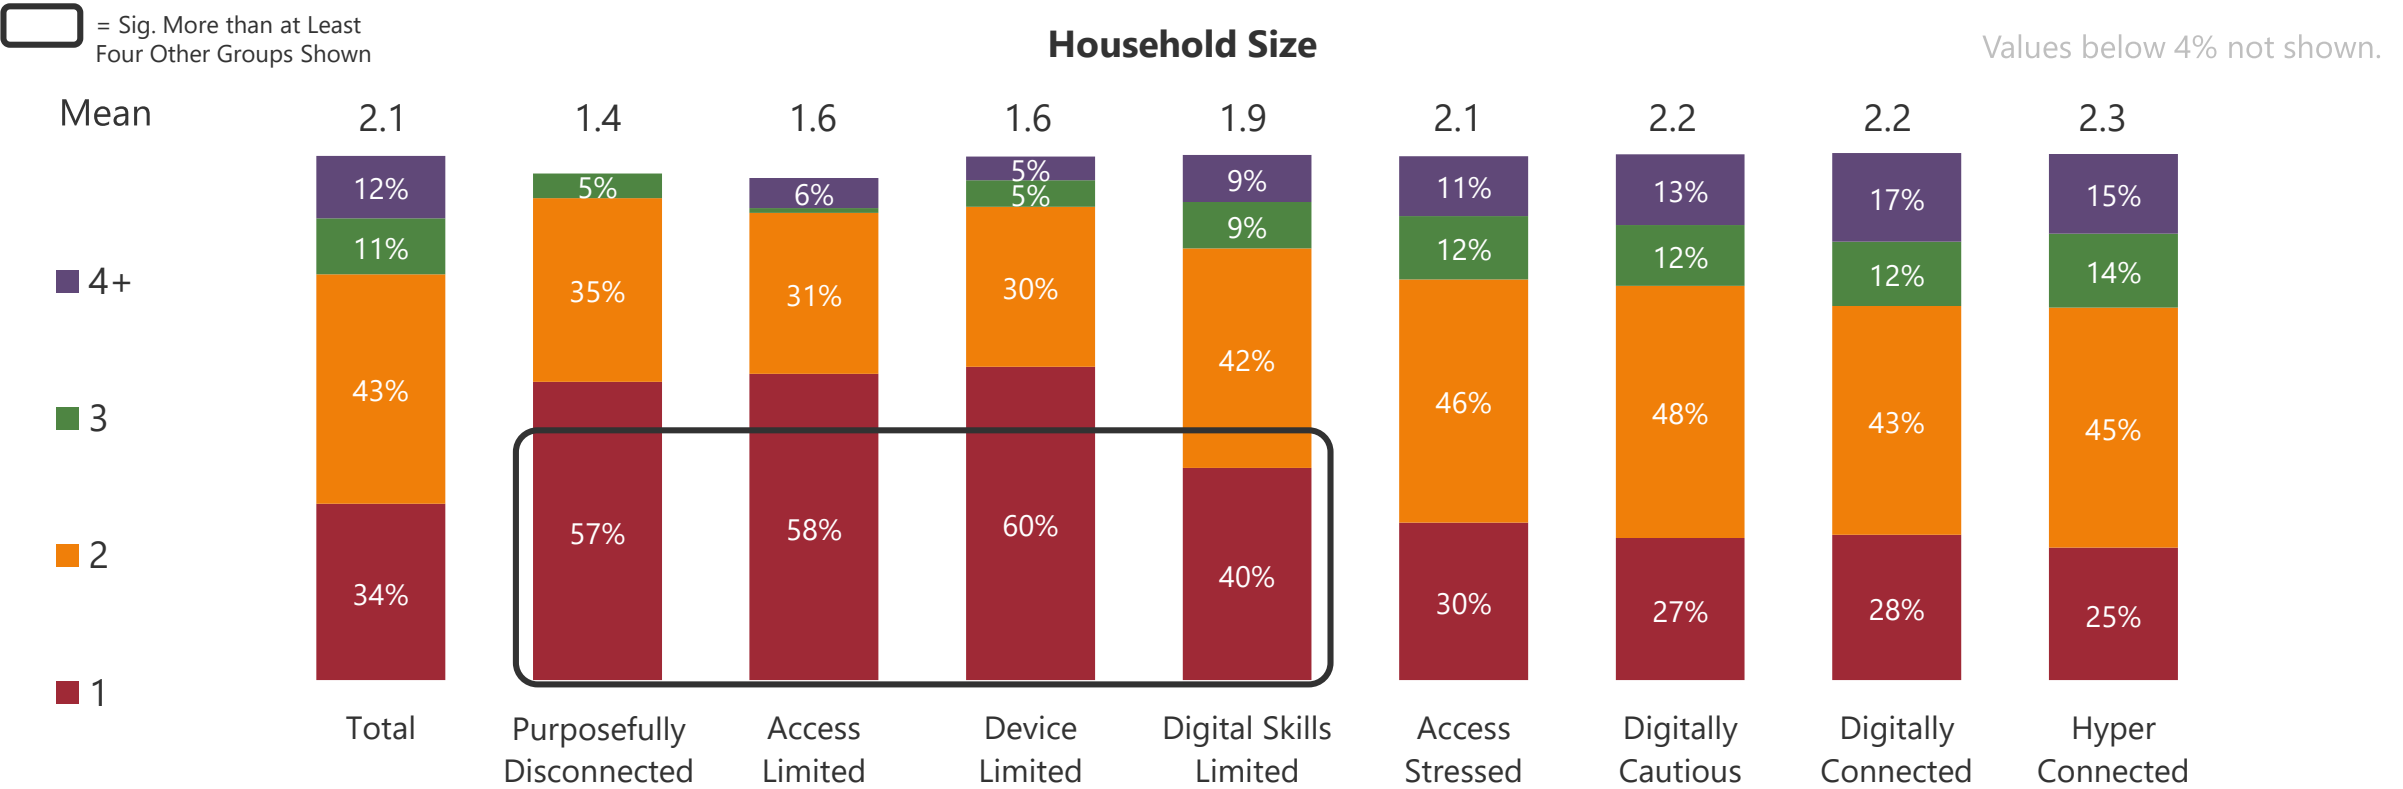

The less connected segments have higher proportions of unemployed and/or disabled members. Students have their highest presence in the Access Limited and Access Stressed segments.

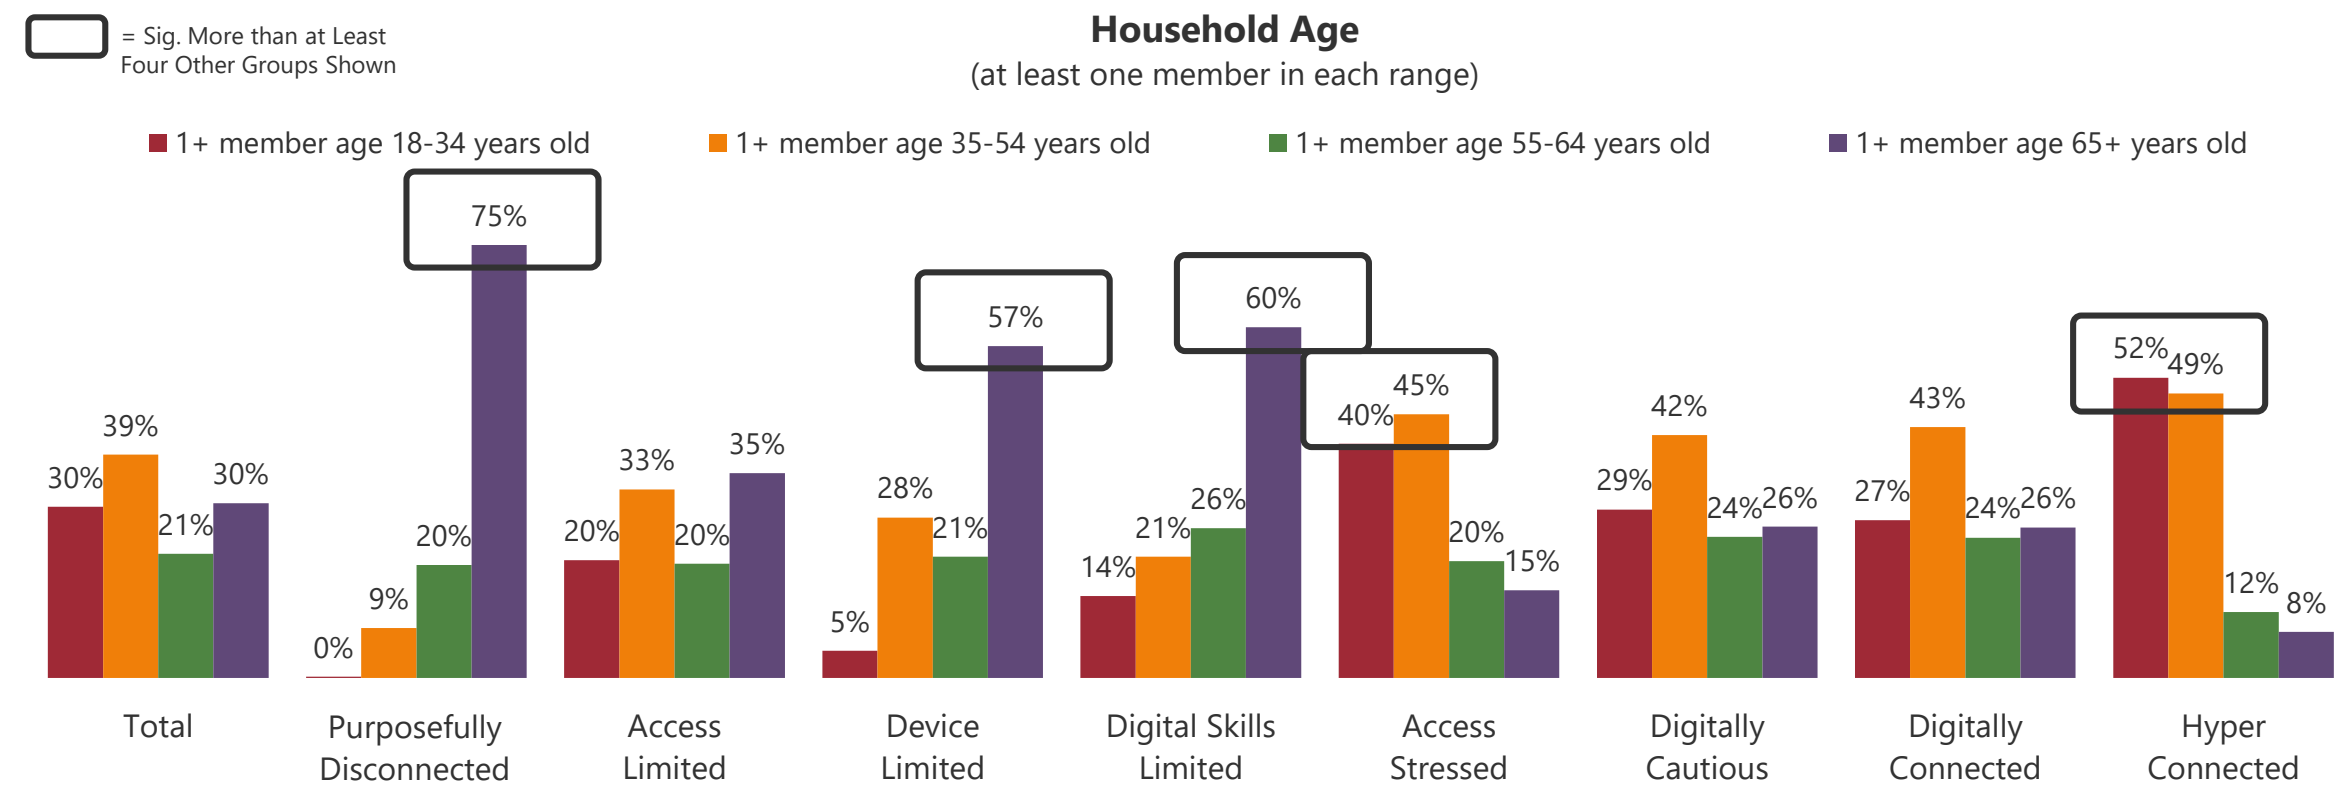

There is a positive correlation between education and digital connectedness – those with higher education levels are more likely to have stronger digital connectedness.

Those in the Purposefully Disconnected, Access Limited, Device Limited, and Digital Skills Limited segments tend to have smaller households and/or to live alone.

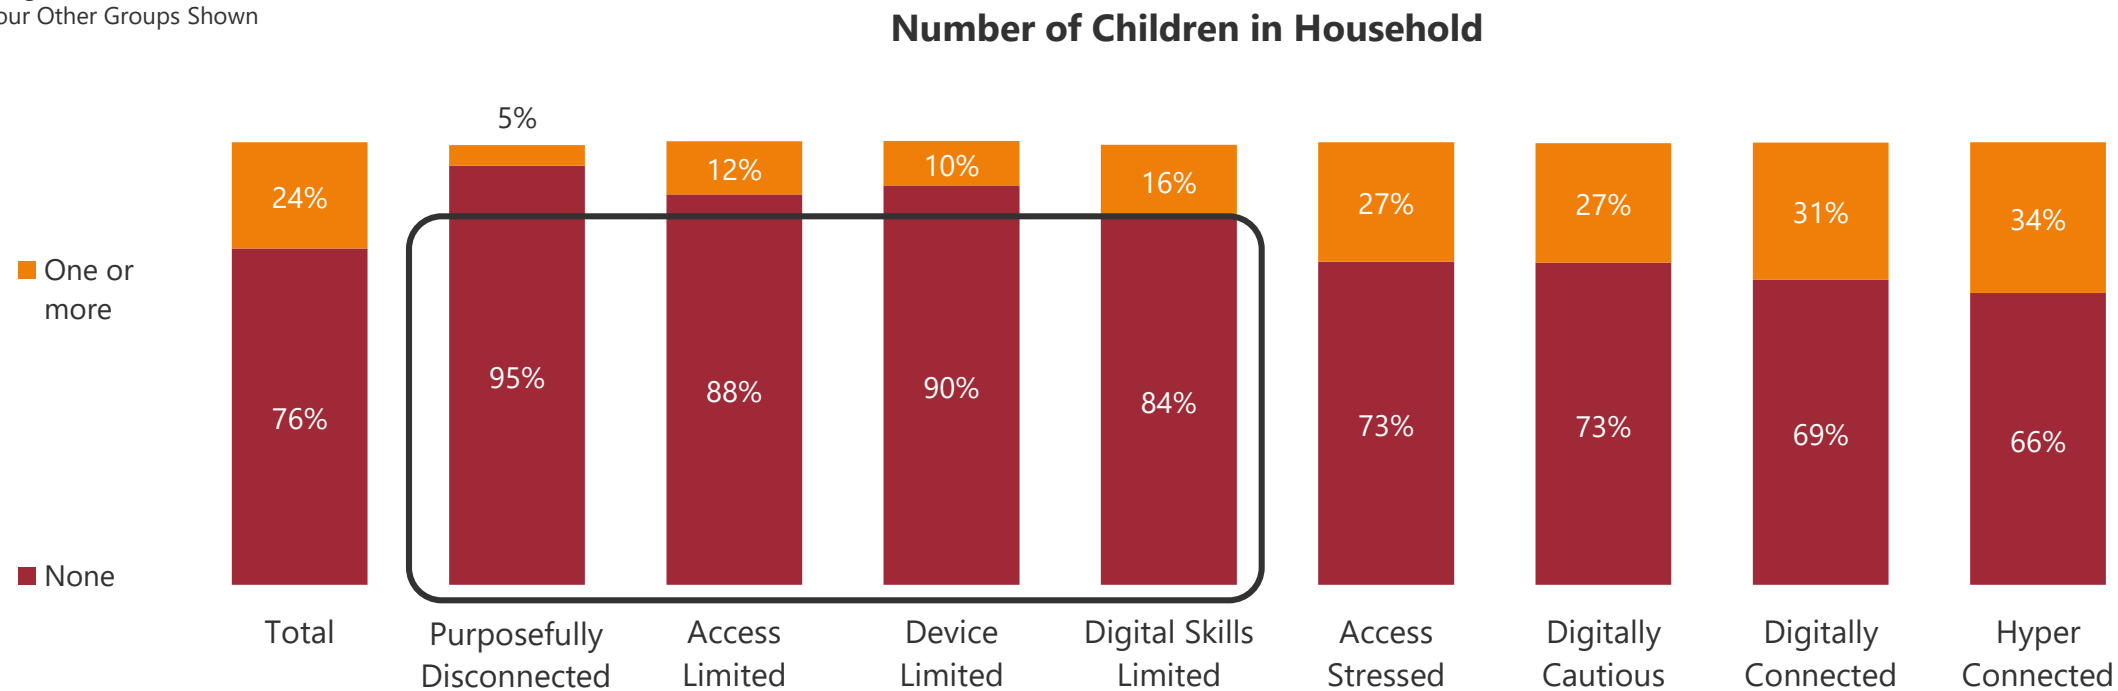

The Purposefully Disconnected, Device Limited, or Digital Skills Limited are more likely to be 65 years or older, while the Access Stressed and Hyper Connected are more likely to fall into younger age categories.

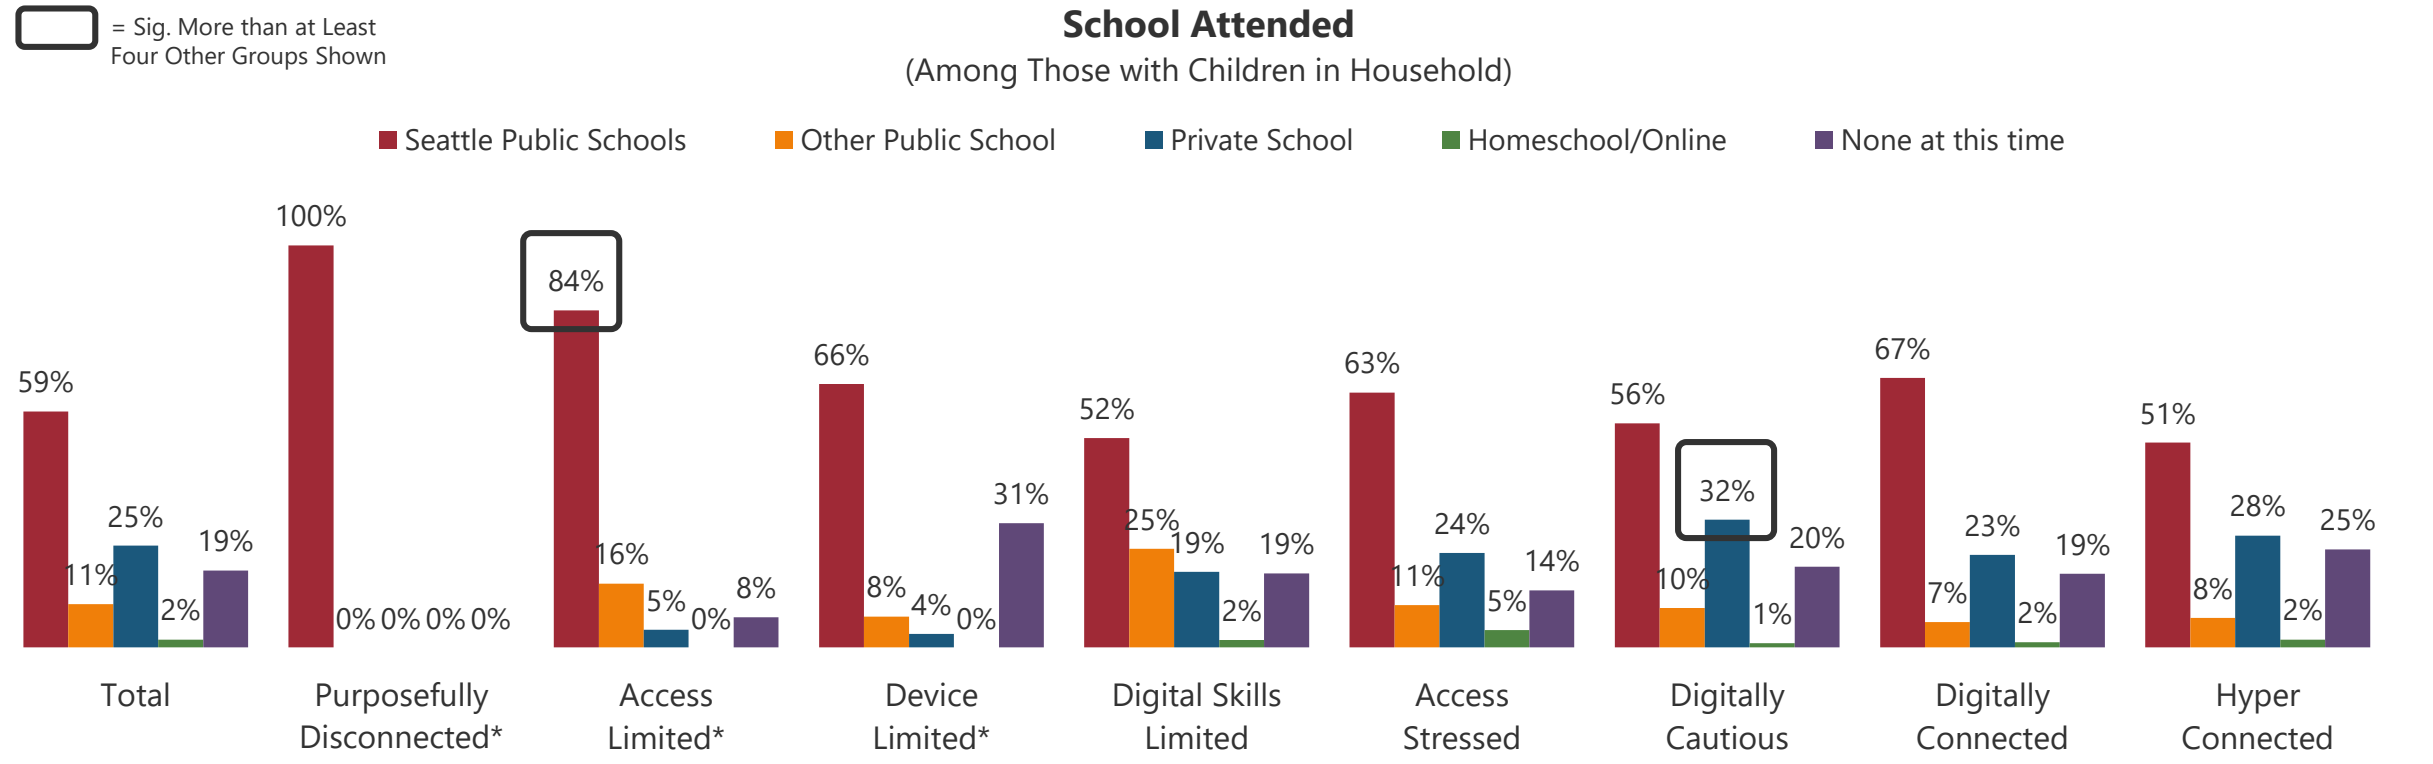

Those at the more connected end of the digital spectrum are more likely to have children in the household.

 = Sig. More than at Least Four Other Groups Shown

There is some variance across segments regarding how they are schooling their children. Seattle Public Schools are utilized to a greater degree by the less connected end of the digital spectrum. Private schools are more likely utilized by the Digitally Cautious segment.

Base: Total Answering – Among those with Children in Household. Total (n1326), Purposefully Disconnected (n2*), Access Limited (n22*), Device Limited (n21*), Digital Skills Limited (n161), Access Stressed (n224), Digitally Cautious (n408), Digitally Connected (n245), Hyper Connected (n243). Household Weight.

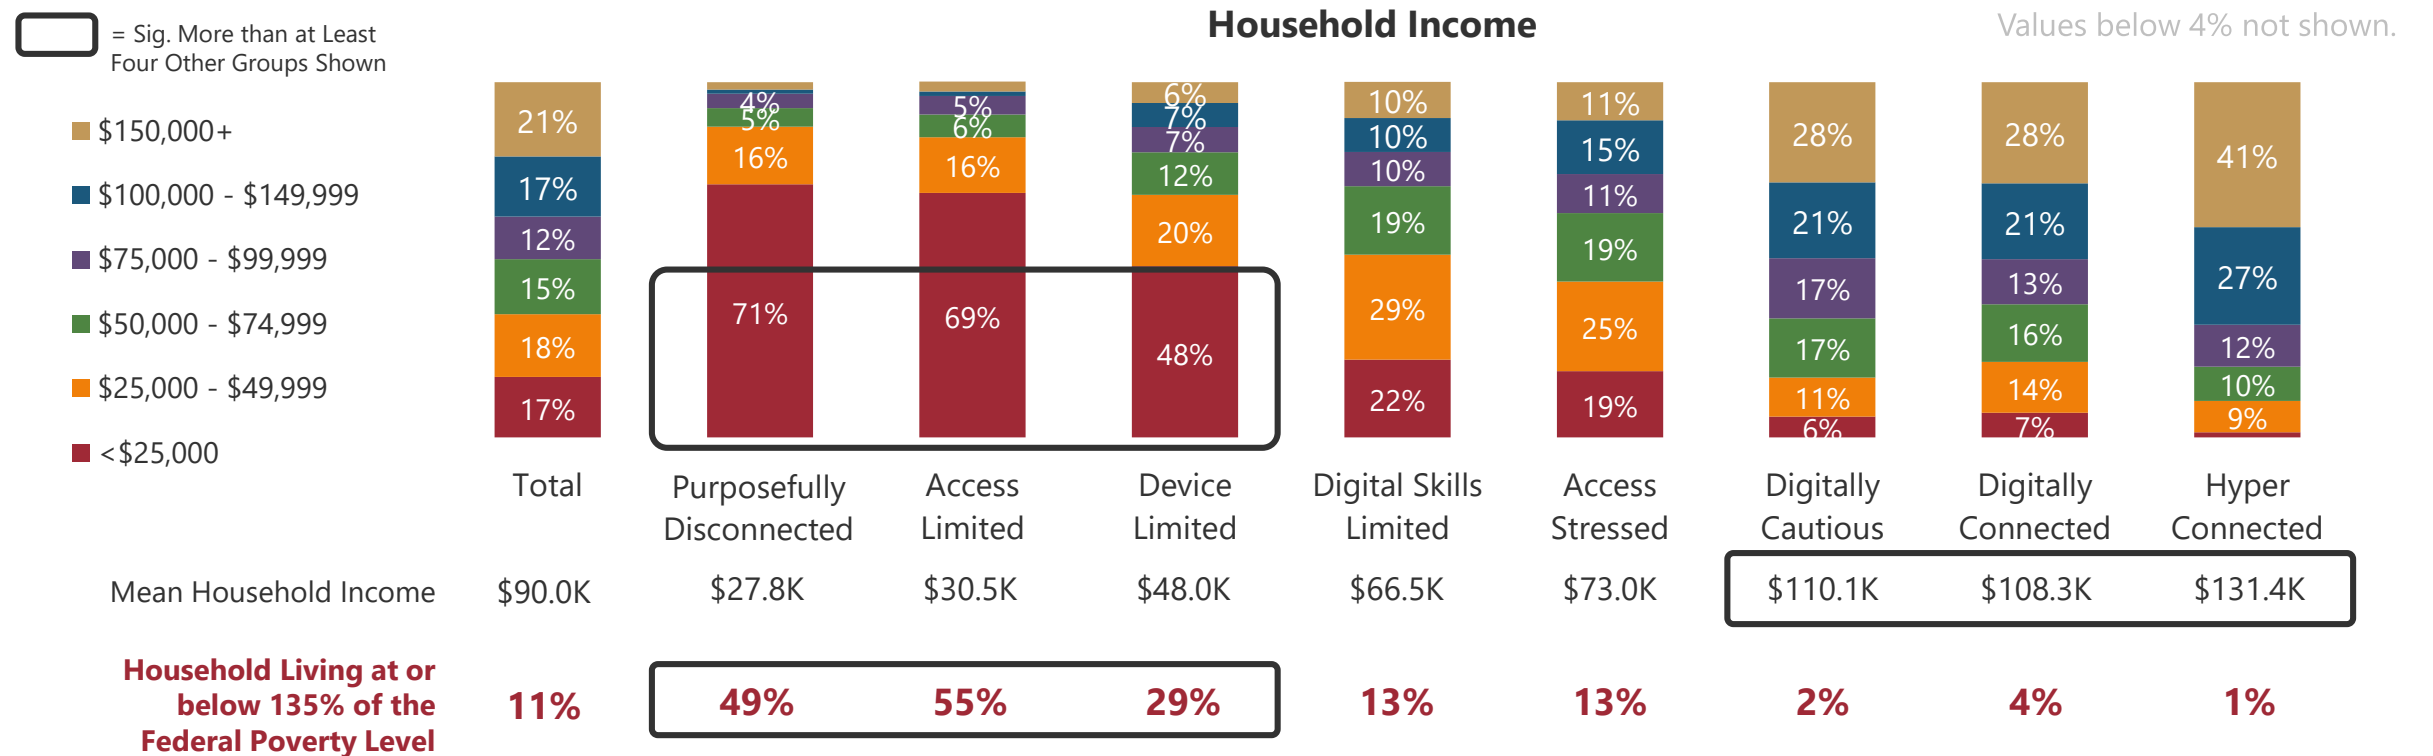

*Limited sample size. Sub-segment analysis warrants further research and/or a large sample size.

Q27B - Please also tell us where each of the children attend school (if you have children in school).

Pacific Market Research 138

There is a positive correlation between household income and digital connectedness – those with higher incomes are more likely to have stronger digital connectedness.

In line with the higher household income, those at the less connected end of the spectrum are more likely to have members living at or below 135% of the Federal Poverty Level.

Base: Total Answering. Total (n3616), Purposefully Disconnected (n97), Access Limited (n138), Device Limited (n188), Digital Skills Limited (n610), Access Stressed (n574), Digitally Cautious (n956), Digitally Connected (n516), Hyper Connected (n537). Household Weight.

Q29 – What is your approximate total household annual income?

Base: Total Answering. Total (n4315), Purposefully Disconnected (n133), Access Limited (n160), Device Limited (n218), Digital Skills Limited (n762), Access Stressed (n676), Digitally Cautious (n1142), Digitally Connected (n616), Hyper Connected (n608). Household Weight.

Q26A – Including yourself, how many adults (age 18 and older) live in your household?

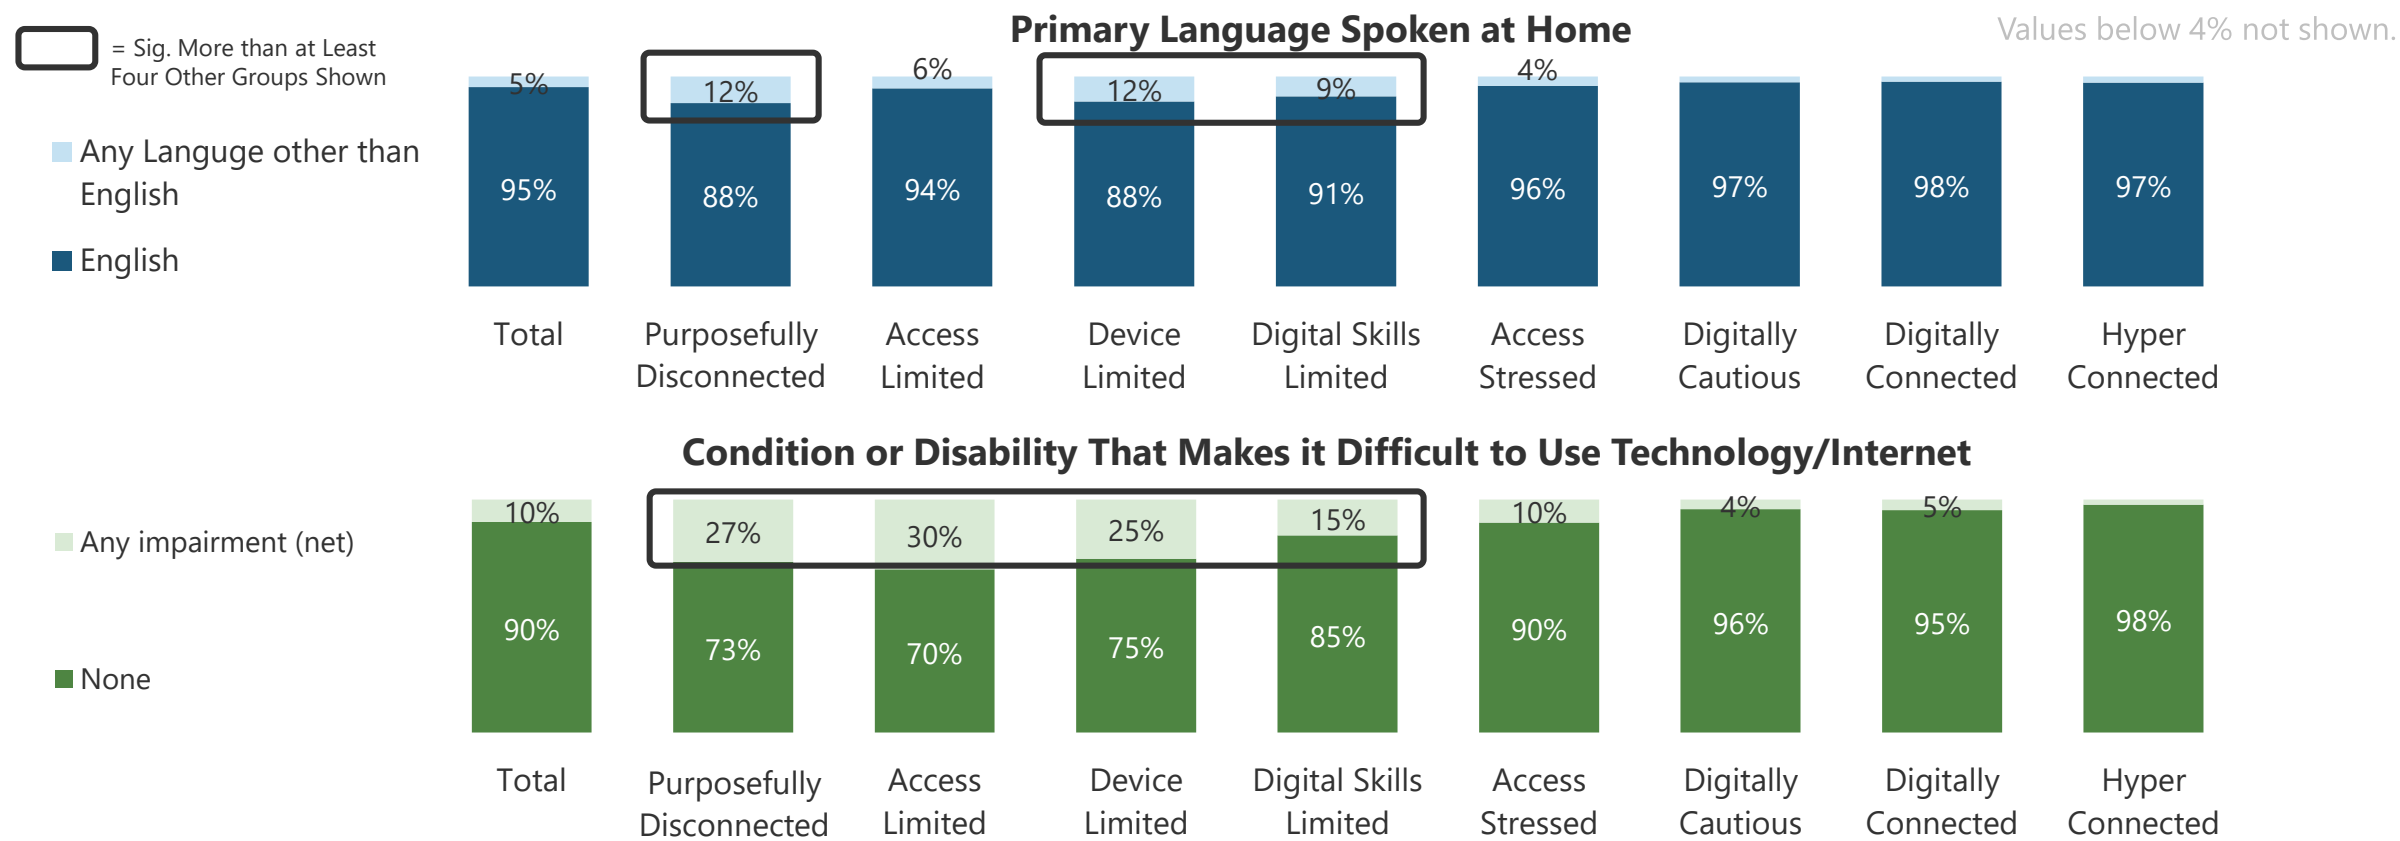

Q27A – Please tell us the number of children where you live in each of the age and grade categories listed.

Pacific Market Research

139

Purposefully Disconnected, Device Limited, and Digital Skills Limited segments are the most likely to have members that speak a language other than English at home.

These same segments, along with the Access Limited are also more likely to have members with an impairment that makes it difficult to use technology or the internet.

Base: Total Answering. Total (n4225), Purposefully Disconnected (n123), Access Limited (n155), Device Limited (n205), Digital Skills Limited (n746), Access Stressed (n664), Digitally Cautious (n1123), Digitally Connected (n609), Hyper Connected (n600). Household Weight.

Q36 – What language is spoken most of the time where you live?

Base: Total Answering. Total (n4223), Purposefully Disconnected (n115), Access Limited (n151), Device Limited (n204), Digital Skills Limited (n740), Access Stressed (n672), Digitally Cautious (n1131), Digitally Connected (n611), Hyper Connected (n599). Household Weight.

Q37 – Do you, or does any member of your household, have a medical condition or disability that makes it difficult to use technology or the internet without assistance or adaptation?

Purposefully Disconnected

3% of the Total Population

Purposefully Disconnected Segment

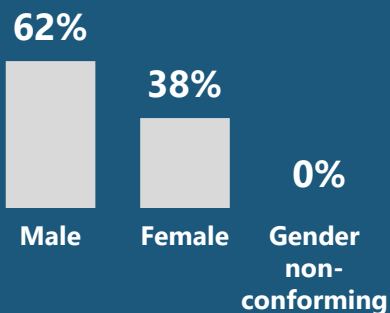

Segment Profile: 3% of the total population

This segment does not feel any connection with technology or the internet – they do not need or want it, and they find it unimportant in their daily lives. They tend to feel the internet and technology has had either a harmful or mixed effect; few see it as solely beneficial. They have a level of mistrust for the internet or for businesses who only operate online.

They do not have a lot of personal devices (with the exception of a mobile phone), and they do not have internet access where they live. They express a distinct preference for in-person/personal communication in interactions with a group or the City. On the rare occasions they go online, (perhaps at the library), the primary purpose is to read or send email. More than half rely on someone else to help them access or navigate the internet. Over a quarter have a household (HH) member with an impairment that makes it difficult to use technology or the internet without assistance or adaptation.

Top 2 Box Agreement

Purposefully Disconnected – Internet / Device Access

0% *None in this segment have a way to access the internet where they live.*

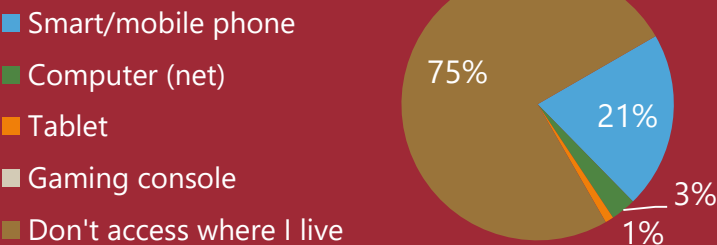

Have access

2 in 5 have a smart or mobile phone, 1 in 5 have a computer. Nearly half have no devices where they live.

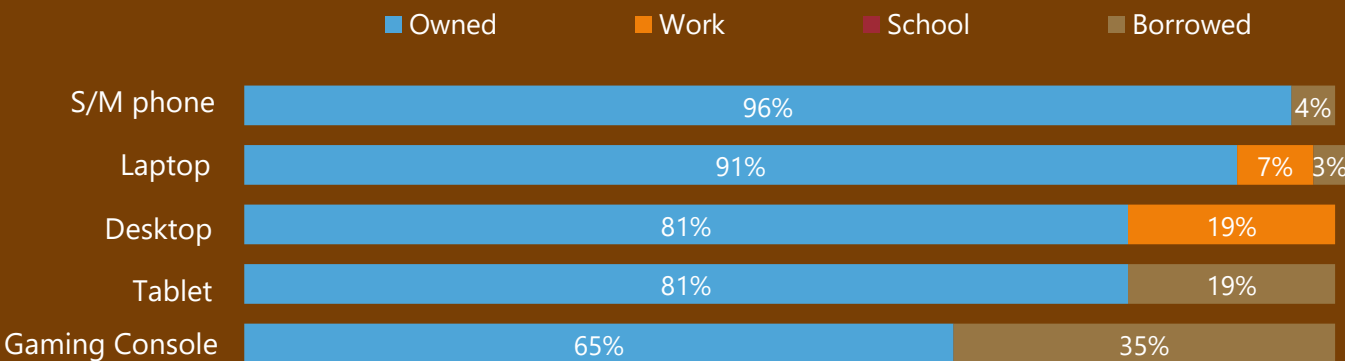

Three quarters do not access the internet; 1 in 5 use their phone.

The ONE device they have access to that they rely on most to access Internet

Most own their devices, although a third of gaming consoles are borrowed.

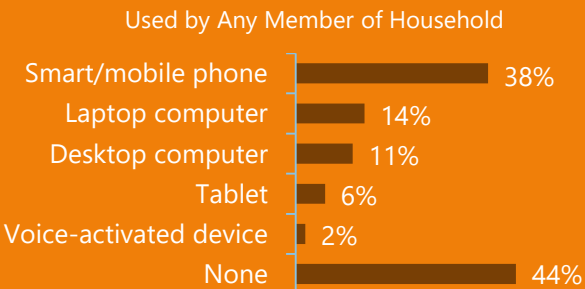

Note: Total may equal more than 100% because of multiple devices in the household.

None in this segment have a home internet provider or have free internet access where they live (e.g. through their building or a neighbor).

Purposefully Disconnected – Technology / Device Usage

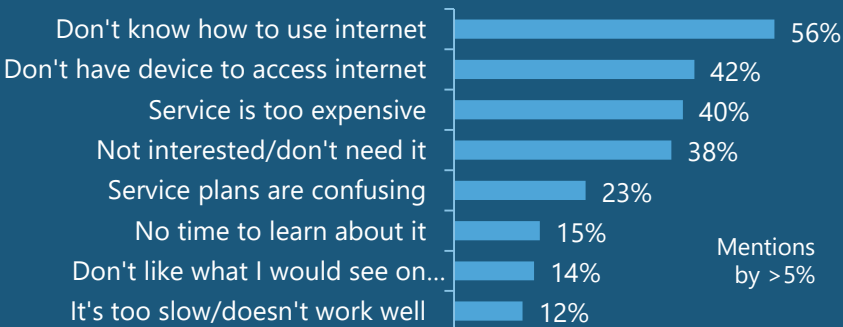

Across the household, close to 2 in 5 have smart/mobile phones, but more than 2 in 5 have no devices in the household.

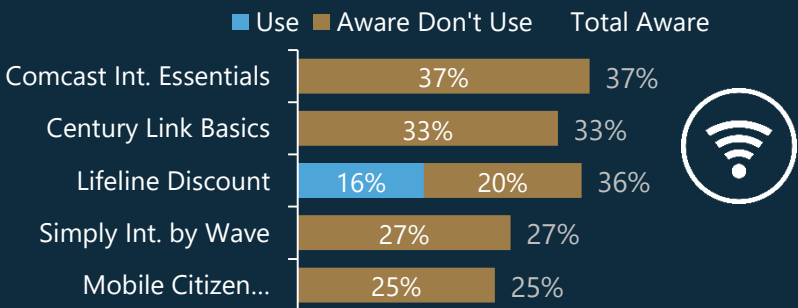

Half with smart/mobile phones are on a pay-as-you-go basis.

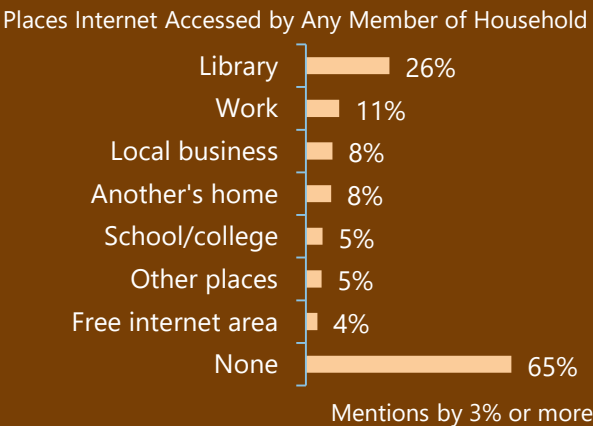

More than half do not use the internet more because they do not know how to use it.

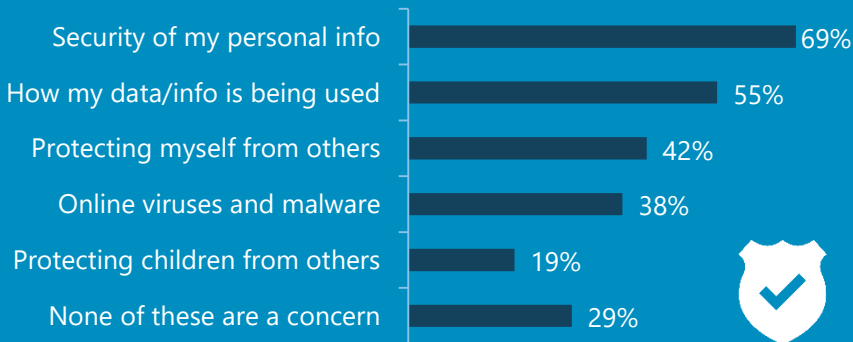

There is very low awareness or use of low cost internet service for qualified low income HHs.

Two thirds have not accessed the internet in the past month, one quarter accessed it through the library.

Top concerns about using the internet include security of personal information and how that data may be used.

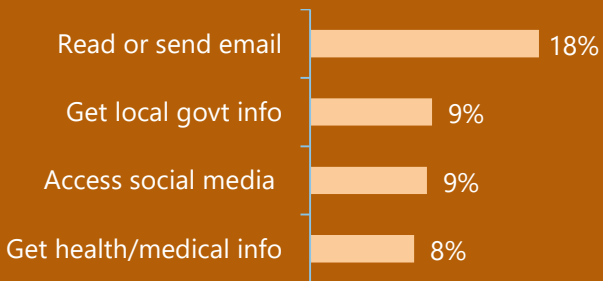

1 in 5
Don't know how to get internet where they live

Top reasons for not having internet:
Cost – 51%
Don't need it/want it – 46%
No device to access – 38%
Don't have credit/deposit – 21%
Don't know how to get it – 20%

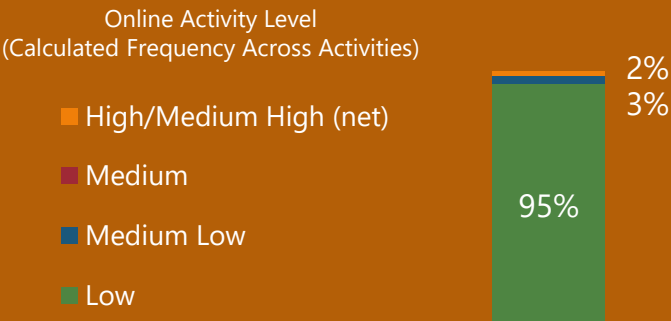

Purposefully Disconnected – Use of Internet / Ability to Use the Internet

The top ONLINE activity engaged in most frequently is email. Fewer than 1 in 10 engage in other types of online activities on a weekly basis.

Online Activities Done AT LEAST WEEKLY (Top Mentions)

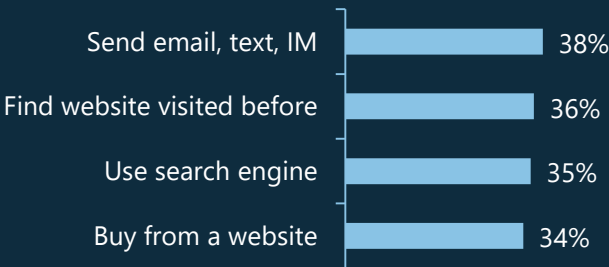

This segment is NOT active online – nearly all (95%) fall into the lowest activity category.

Just over a third can do the most common online activities, including using email, visiting websites, using a search engine, or shopping online. Only a third or fewer can do 8 activities of the remaining 12.

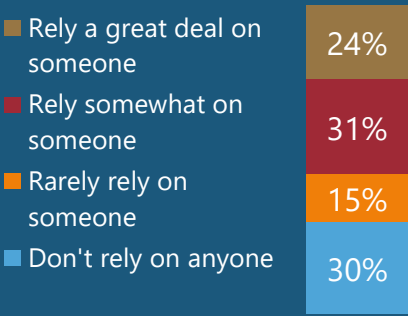

Could Do These Online Activities (Top Mentions for "Can Do")

This segment indexes very low on online skills with 4 in 5 rated "below average." (Close to 2 in 3 index at a "very low.")

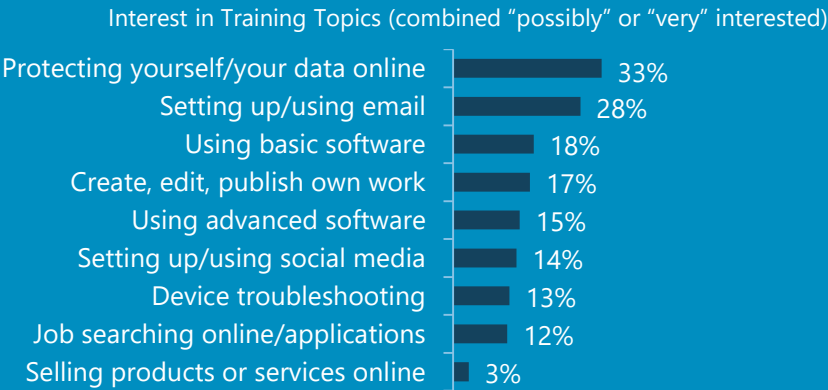

More than half rely on someone else to help them access or navigate the internet.

27%
Have impairment

Over a quarter have a household member with an impairment that makes it difficult to use technology or the internet without assistance or adaptation.

Around 3 in 10 would be interested in learning how to protect themselves online or in how to use email.

Access Limited

4% of the Total Population

Access Limited Segment

Segment Profile: 4% of the total population

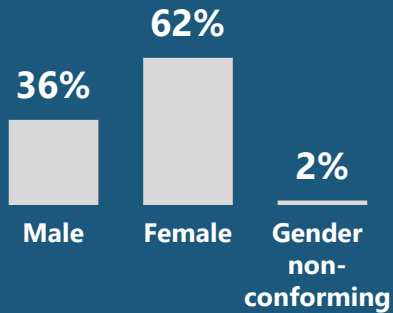

This segment feels a connection with technology and the internet – both are important to their daily lives – but they face access barriers. Less than half have internet access where they live. Most rely on their phone to access the internet and the majority are on a limited or pre-paid plan. Cost is the primary reason they don't use the internet more. This segment has some limited awareness of low cost internet service plans for qualified households (HHs), but few use them.

While they worry, like many, about the security of their personal data, this segment does not mistrust the internet. Three quarters feel the internet and technology have been personally beneficial. Seven in ten feel confident in accessing or navigating the internet, and rarely, if ever, rely on someone else to help them. Most are comfortable engaging in a wide range of online activities. When they go online, they commonly email, use social media, and stream video or music.

This segment has limited income. One third are disabled and three in ten have a household member with an impairment that makes it difficult to use technology or the internet without assistance or adaptation.

\$144

Average monthly cost among those who pay for service.

4 in 5 feel the internet connection and speeds in the place they live are generally adequate to do the things they want or need to do.

■ Completely Adequate ■ Mostly ■ Sometimes ■ Rarely/Not Adequate

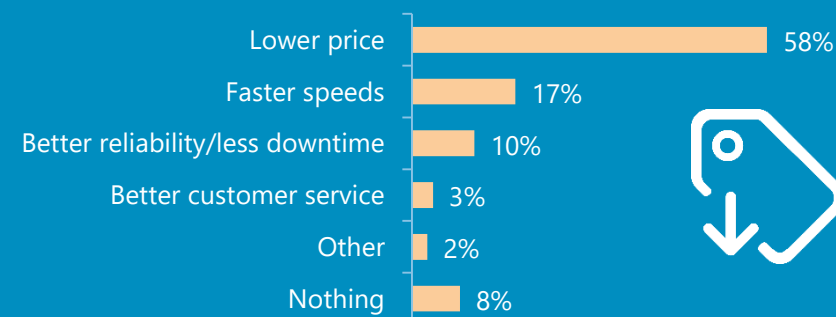

Among those with internet where they live

■ Download Speed 25 Mbps or less ■ Download Speed 100 Mbps or more

Regarding the ONE thing they would change about the internet where they live, 3 in 5 cite a lower price.

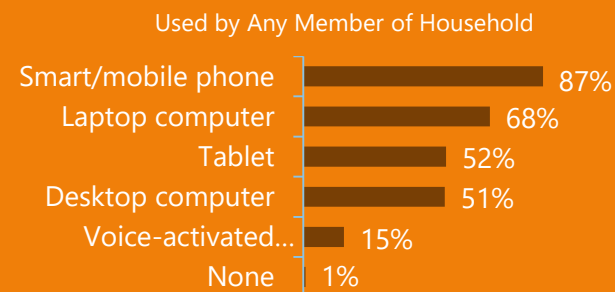

Among those with internet where they live

Note: Total may equal more than 100% because of multiple devices in the household.

Digital Skills Limited – Technology / Device Usage

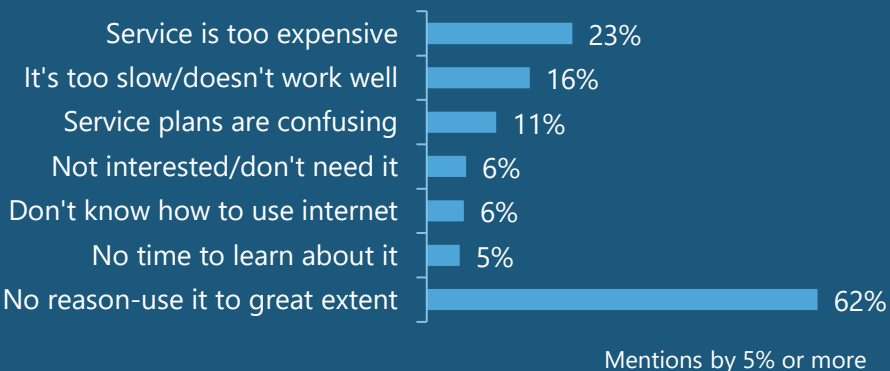

Across the household, close to 9 in 10 use a smart/mobile phone, over two thirds use a laptop, and half use a tablet or desktop PC.

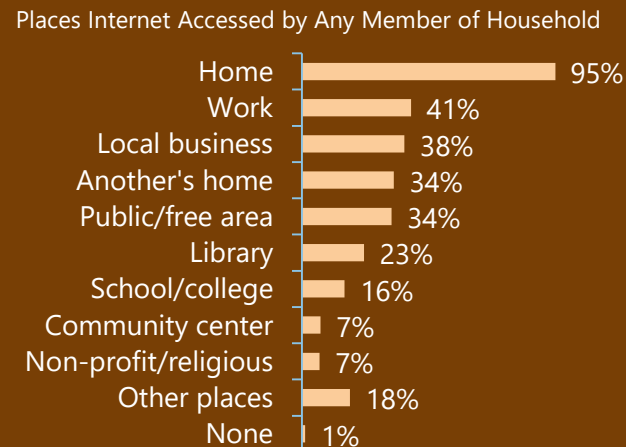

Nearly 9 in 10 are on a contract data plan, split between limited and unlimited.

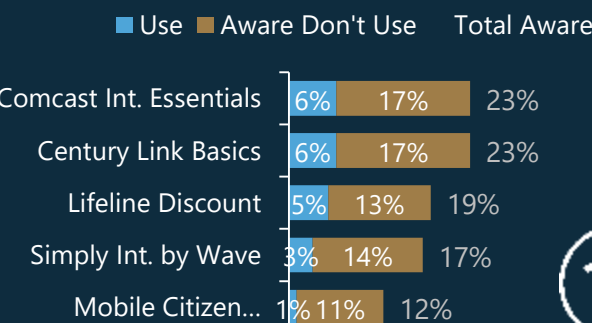

Close to a quarter do not use the internet more because the service is too expensive, but 3 in 5 note they already use the internet to a great extent.

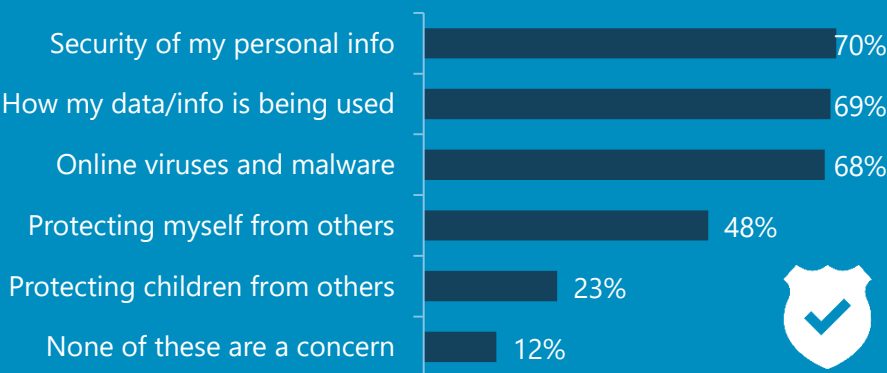

They have mostly accessed the internet at home in the past month

Roughly a fifth are aware of low cost internet service plans for qualified low income HHs, but few use them.

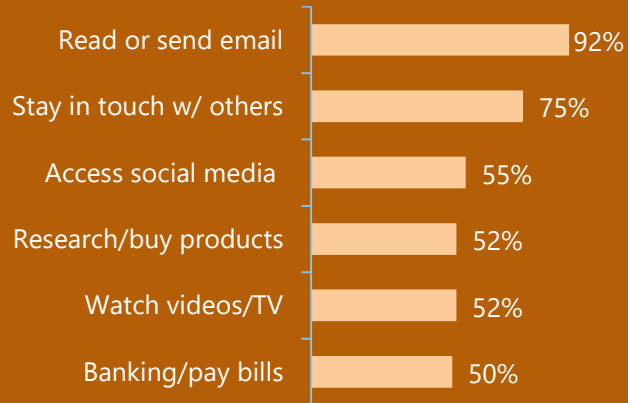

Top concerns about using the internet include security of their personal information, how their data may be used, and online viruses and malware.

Digital Skills Limited – Use of Internet / Ability to Use the Internet

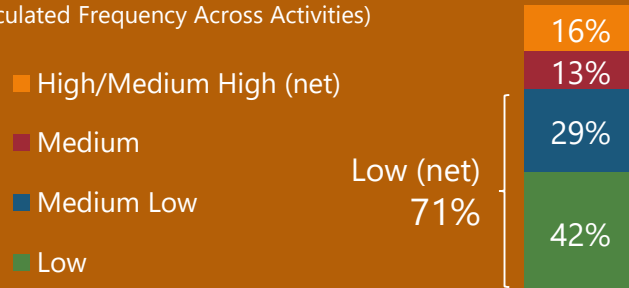

ONLINE activities engaged in most frequently include email and staying in touch with others. Only half or fewer engage in other activities at least weekly.

Online Activities Done AT LEAST WEEKLY (Top Mentions)

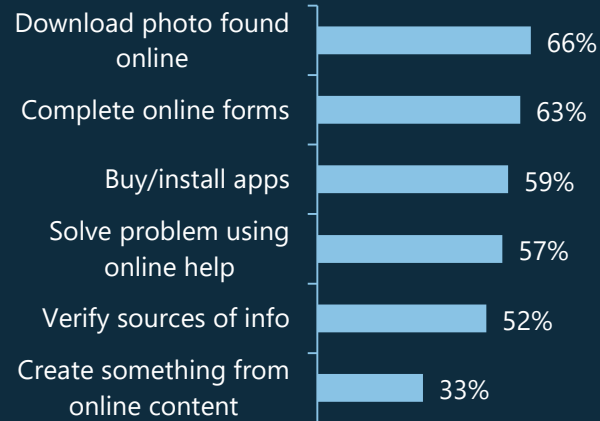

This segment is not very active online – 7 in 10 fall into the “low activity (net)” category.

Online Activity Level
(Calculated Frequency Across Activities)

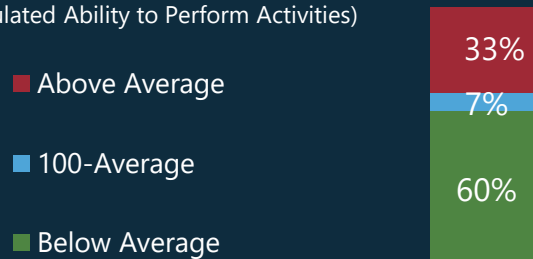

Notable portions are unable to do half of the online activities (out of 12).

Could Do These Online Activities
(Mentions 66% or Fewer “Can Do”)

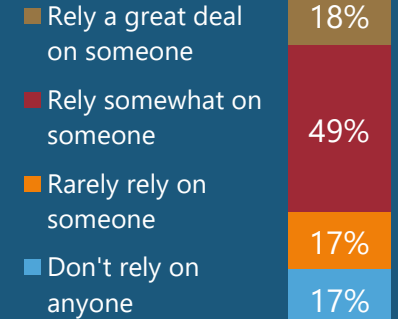

This segment indexes low for online skills with 3 out of 5 index “below average.”

Online Skills Index
(Calculated Ability to Perform Activities)

Two thirds rely on someone else to help them access or navigate the internet.

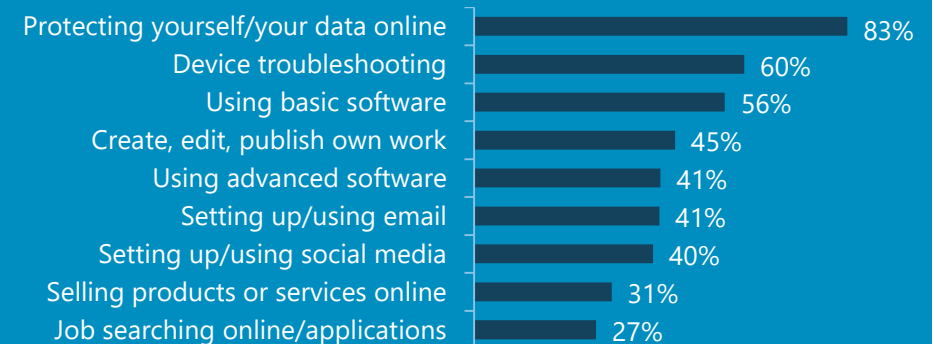

15% Have impairment

About 1 in 7 have a household member with an impairment that makes it difficult to use technology or the internet without assistance or adaptation.

4 in 5 would be interested in learning how to protect themselves and their data; half “very” interested.

Interest in Training Topics (combined “possibly” or “very” interested)

Access Stressed

18% of the Total Population

Access Stressed Segment

Segment Profile: 18% of the total population

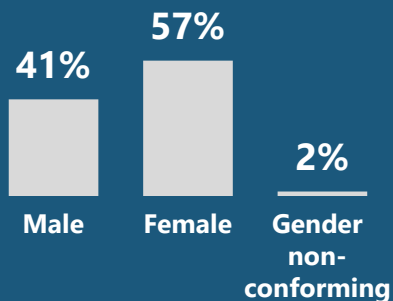

This younger, middle-income segment is technologically savvy and adept. They own an array of digital devices and virtually all consider technology and the internet to be important to their daily lives; two in three consider it "extremely important." They have internet access where they live, but that access is not always satisfactory.

This segment is more likely than others to say their internet is only sometimes adequate to do the things they want or need to do. They tend to have a slower download speed than other segments with a similar wide array of devices. One in four only have a speed of up to 15 Mbps.

Regarding the one thing they would change about the internet where they live, over half cite a lower price, and one in four cite faster speeds. Three in ten do not use the internet more because the service is too expensive, and nearly a quarter limit their use because it is too slow or does not work well. This segment is more likely than others to worry about being able to afford new devices as technology changes and improves.

While highly confident with technology and the internet, this segment is more likely than others to worry about being able to afford new devices as technology changes and improves.

Top 2 Box Agreement

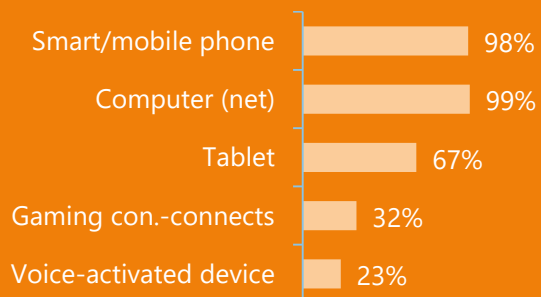

Access Stressed – Internet / Device Access

100%

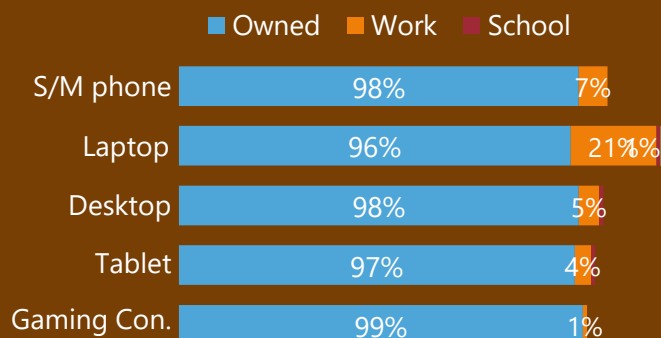

Have access

All in this segment have a way to access the internet where they live.

Nearly all have a smart/mobile phone and computer in the household (HH), 2 in 3 have a tablet, 1 in 3 a gaming console.

Just about all own their devices.

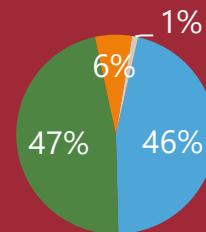

Most are generally split between relying on their phone or their computer to access the Internet.

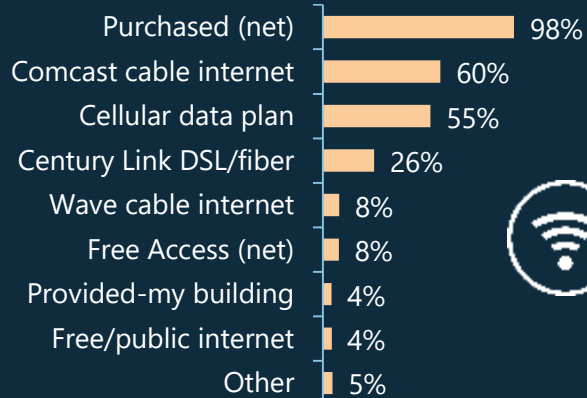

The ONE relied on to access Internet

- Smart/mobile phone
- Computer (net)
- Tablet
- Gaming console

Nearly all purchase their internet, but 1 in 12 note they have free access.

\$141

Average monthly cost among those who pay for service.

More likely than others to say their internet is only sometimes adequate to do the things they want or need to do.

Completely Adequate Mostly Sometimes Rarely/Not Adequate

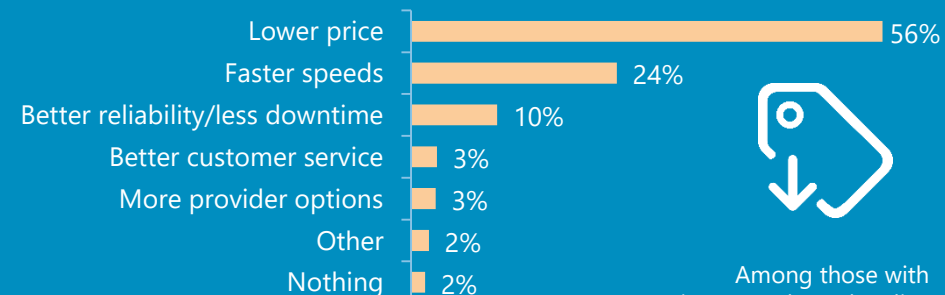

Among those with internet where they live

They tend to have a slower download speed than other segments with a similar wide array of devices. (25% only have a speed of up to 15 Mbps)

Download Speed 25 Mbps or less Download Speed 100 Mbps or more

Regarding the ONE thing they would change about the internet where they live, over half cite a lower price, 1 in 4 cite faster speeds.

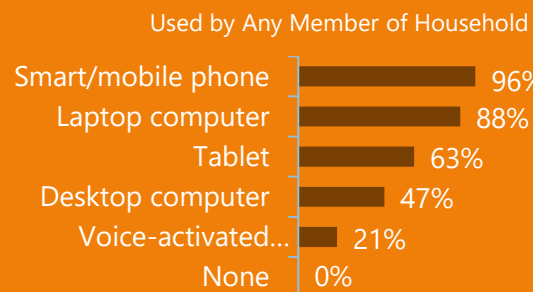

Among those with internet where they live

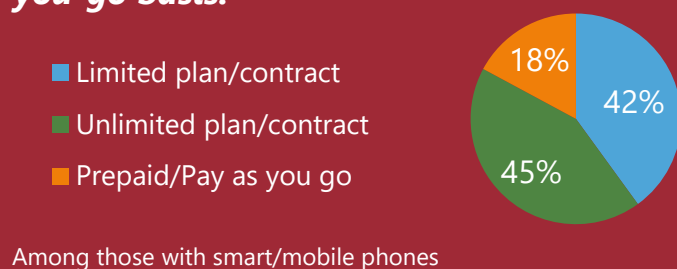

Note: Total may equal more than 100% because of multiple devices in the household.

Access Stressed – Technology / Device Usage

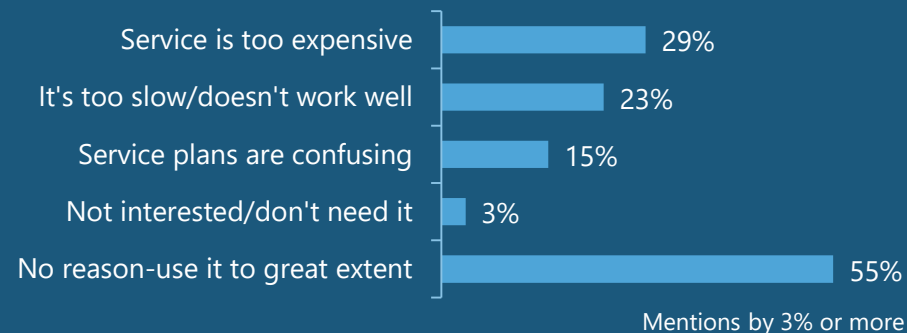

Across the household, nearly all use a smart/mobile phone and a laptop, almost 2 in 3 use a tablet, and close to half use a desktop PC.

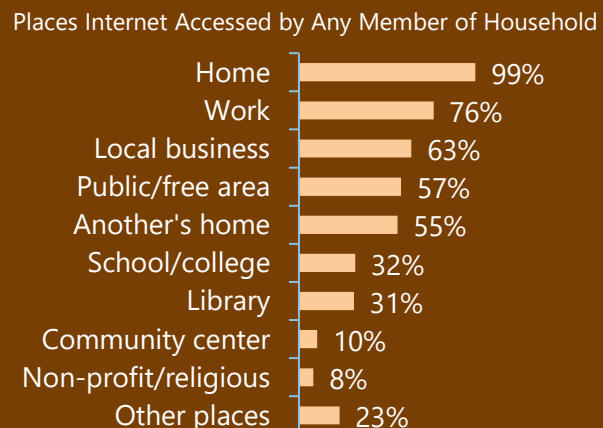

While the majority are on a contract data plan (split between limited and unlimited), nearly 1 in 5 are on a pay-as-you-go basis.

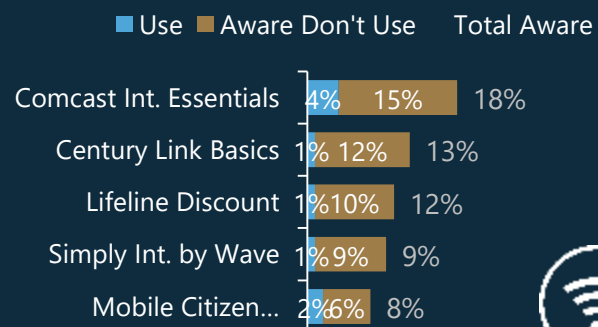

3 in 10 do not use the internet more because the service is too expensive, and nearly a quarter limit their use because it is too slow or does not work well.

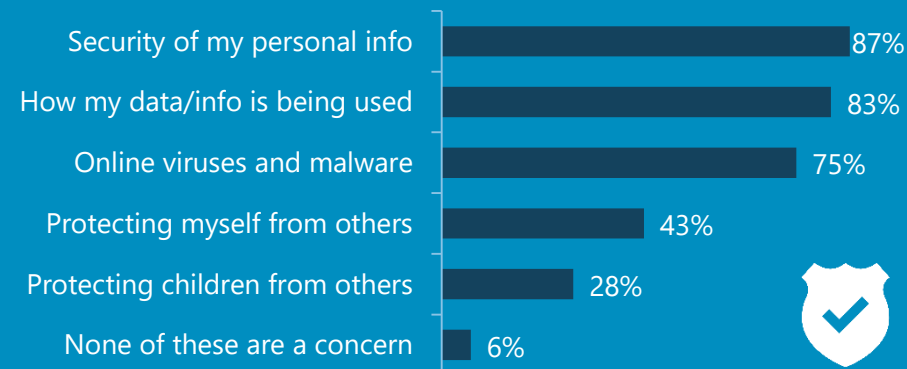

More likely than most others to have accessed the internet at school or the library.

Generally low awareness of low cost internet service plans for qualified low income HHs, and very little use of them.

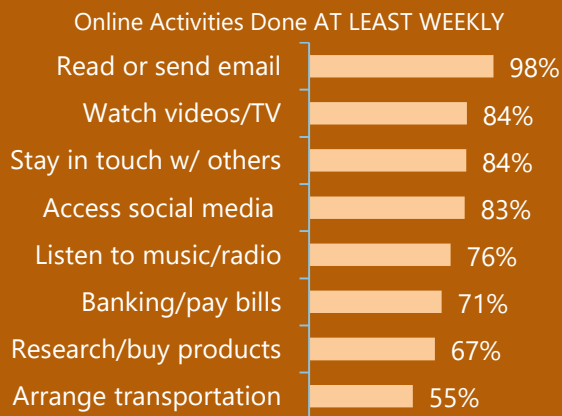

Top concerns about using the internet include security of their personal information, how their data may be used, and online viruses and malware.

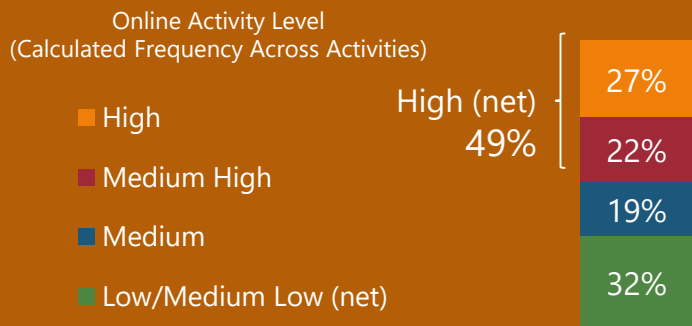

Access Stressed – Use of Internet / Ability to Use the Internet

ONLINE activities engaged in most frequently include email, staying in touch with others, streaming video or music, and accessing social media.

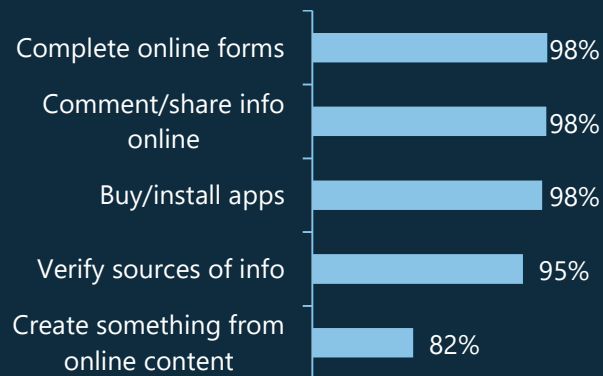

The Access Stressed segment is the second* most active online, with half falling into the "high activity (net)" level.

(*Second only to the Hyper Connected.)

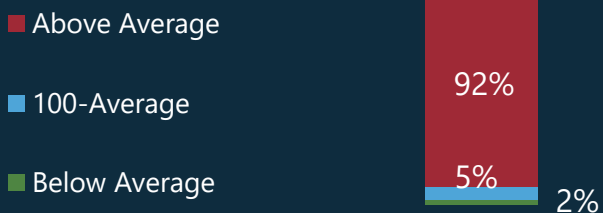

This segment is digitally adept. Nearly all can do 7 of 12 tasks, and most are capable of doing the remaining five activities.

Could Do These Online Activities (Mentions <99% "Can Do")

This segment indexes high for online skills with nine in ten index "above average."

Online Skills Index
(Calculated Ability to Perform Activities)

They rarely, if ever, rely on someone else to help them access or navigate the internet.

Appendix: Digital Divide Index (DDI)

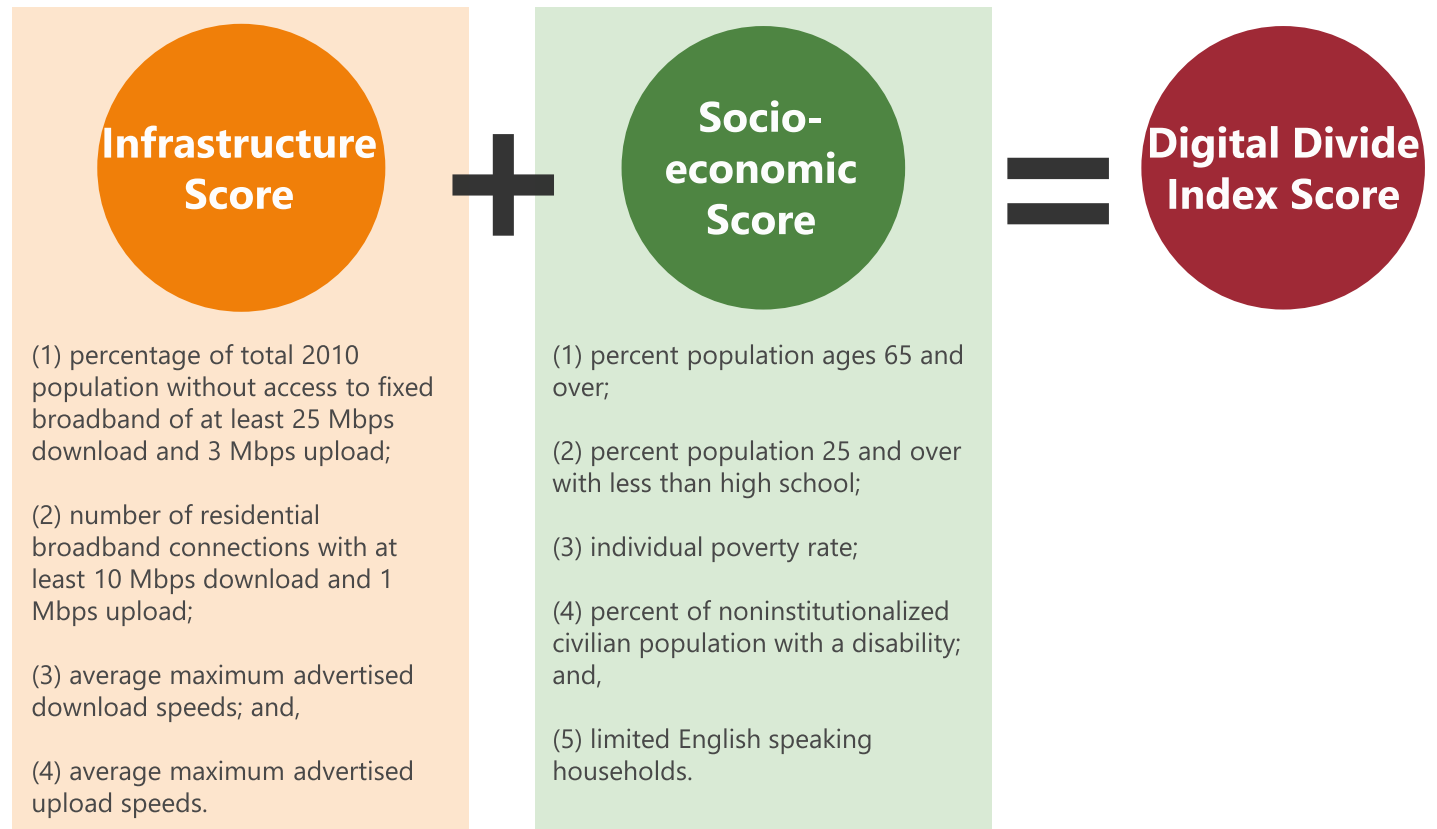

- Methodology
- Overall Digital Divide Index (DDI) Summary
- Infrastructure Score Summary
- Socioeconomic Score Summary

Digital Divide Index (DDI) Overview

As technological and digital advancement continues, there is a growing concern that some individuals may fall behind or be left out from receiving and benefiting from the opportunities of the digital age.

To measure and assess the issue of a lack of access and/or digital skills (known as the digital divide), Dr. Roberto Gallardo of Purdue University Center of Regional Development created a metric called the Digital Divide Index (DDI). The DDI was designed as a descriptive and pragmatic tool to help policymakers and leaders understand this topic and rank geographic areas along a digital divide continuum.

There are two main categories and scores that are used for the DDI index total score (Infrastructure and Socioeconomic scores). Each of these have different factors that make up each of their individual scores.

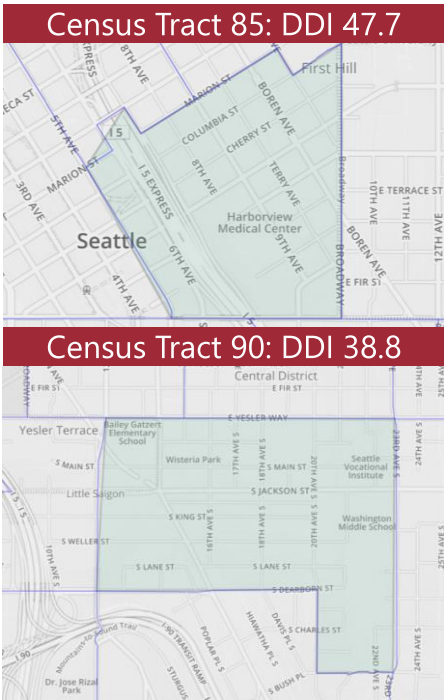

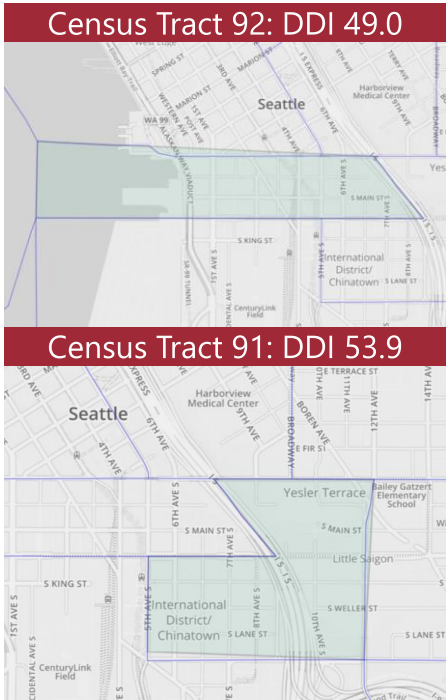

Households in South Central Seattle and Holly Park neighborhoods are significantly less likely to have internet access in the home. Residents living in these areas also have limited public resources for accessing the internet.

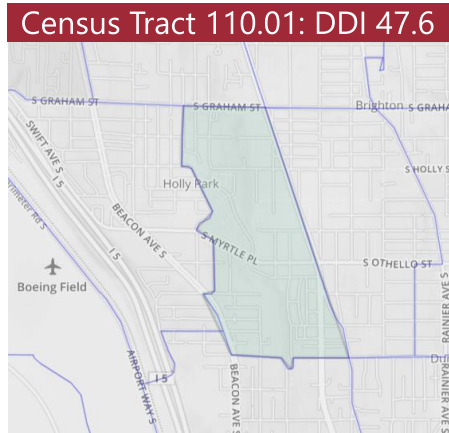

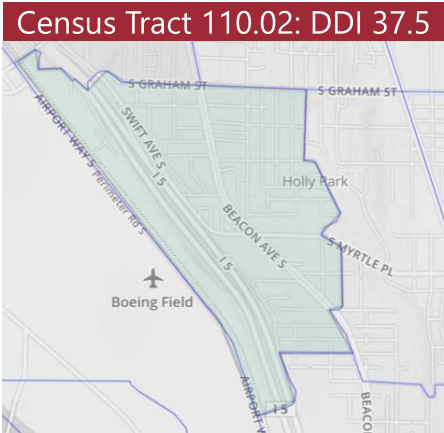

Census tracts with the most digital need (based on the Digital Divide Index*) include: South Central Seattle (Pioneer Square, Yesler Terrace, International District), and Holly Park in South Seattle.

Digital Device Index (DDI) Score*:

Digital access resources in **South Central Seattle** include some cultural centers and a few public access points: the Central Library in Downtown Seattle, the International District SPL Branch, and the Yesler Terrace Rec. Center Computer Lab.

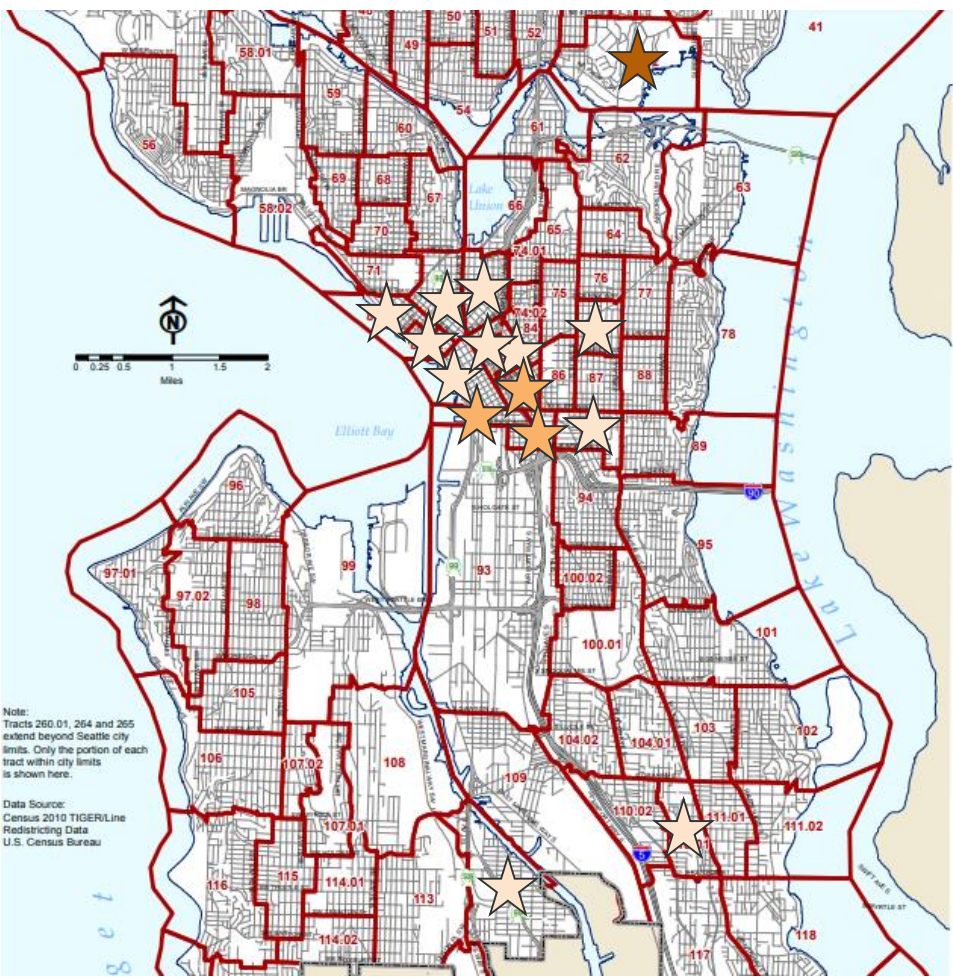

There are only three public access points in **Holly Park**: the New Holly SPL Branch, the New Holly Neighborhood Campus as a part of the Seattle Housing Authority, and the Southeast Customer Service Center.

Limited adoption of broadband connections (at least 10 Mbps download/1 Mbps upload) spreads across 15 census tract and impacts 69,000 residents.

All residents in Seattle have access to at least a 25 Mbps download/3 Mbps (25/3) upload fixed broadband connection, but the degree of adoption of at least a 10Mbps/1Mbps fixed broadband connection is limited (less than 60% of households) in the following tracts. This impacts about one in ten residents (approximately 69,000 based on 2016 ACS).

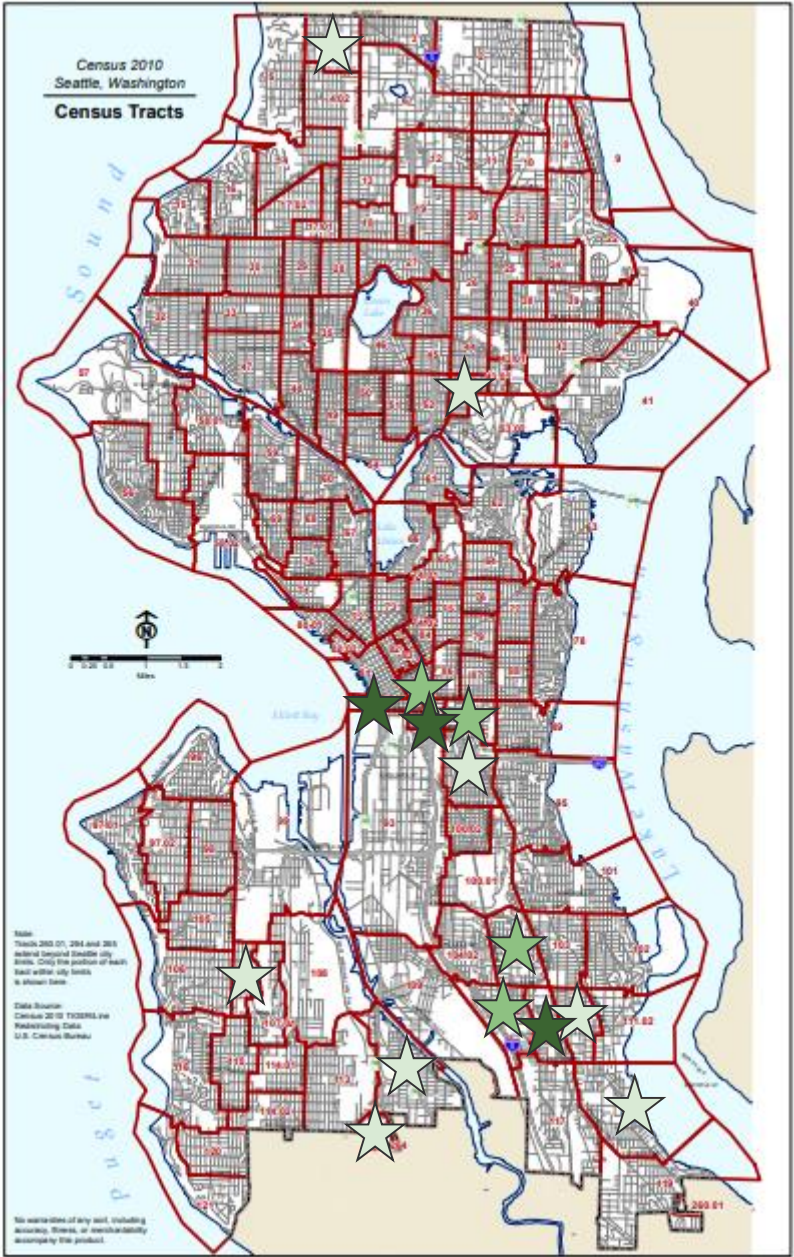

Infrastructure (INFA) Score:			
Census Tract	Neighborhood	Infrastructure (INFA) Score*	% of residential broadband connections with at least 10/1 speed
53.02	UW	55.1	0.1% - 19.9%
85	South Central	46.1	20.0% - 39.9%
91	South Central	44.9	20.0% - 39.9%
92	South Central	44.6	20.0% - 39.9%
82	Downtown	37.7	40.0% - 59.9%
83	Downtown	37.4	40.0% - 59.9%
73	S. Lake Union	37.1	40.0% - 59.9%
81	Waterfront	36.6	40.0% - 59.9%
110.01	Holly Park	36.3	40.0% - 59.9%
72	S. Lake Union	35.9	40.0% - 59.9%
80.02	Waterfront	35.3	40.0% - 59.9%
90	South Central	35.2	40.0% - 59.9%
80.01	Waterfront	34.4	40.0% - 59.9%
79	Capital Hill	34.0	40.0% - 59.9%
112	South Park	33.8	40.0% - 59.9%

Many of the same census tracts that experience lack of adoption, also have socioeconomic factors (older age, living at or below poverty levels, etc.) that are linked to their inability to access the internet.

South Central Seattle, Rainer Valley, and other areas downtown and south of downtown experience significant impacts on accessing technology based on demographics.

Socioeconomic (SE) Score:			
Census Tract	Neighborhood	Socioeconomic (SE) Score*	Top Socioeconomic Components compared to Gen. Pop.
91	South Central	42.5	Limited English, 25+ and Less than HS
110.01	Holly Park	39.6	Poverty, 25+ and Less than HS
92	South Central	37.1	Any Disability
85	South Central	34.8	Older Adults (65+), Any Disability
110.02	Holly Park	32.7	25+ and Less than HS, Limited English
104.01	Rainer Valley	30.2	Limited English
90	South Central	30.0	Older Adults (65+), Any Disability
107.02	High Point	29.1	Poverty
265	South Park	28.6	25+ and Less than HS, Limited English
118	Rainier Valley	28.4	Poverty, 25+ and Less than HS
53.01	University District	26.6	Poverty, Limited English
111.01	Rainier Valley	25.6	Any Disability
94	Beacon Hill	25.3	Limited English
112	South Park	25.1	Poverty
4.01	Bitter Lake/ North	24.9	Older Adults (65+), Any Disability

*Socioeconomic (SE) Score produced as a part of the Digital Divide Index by Dr. Roberto Gallardo, Purdue University Center for Regional Development and Extension Community Development Program; September 2017.

Appendix: Access

- Primary Device Used to Access the Internet at Residence

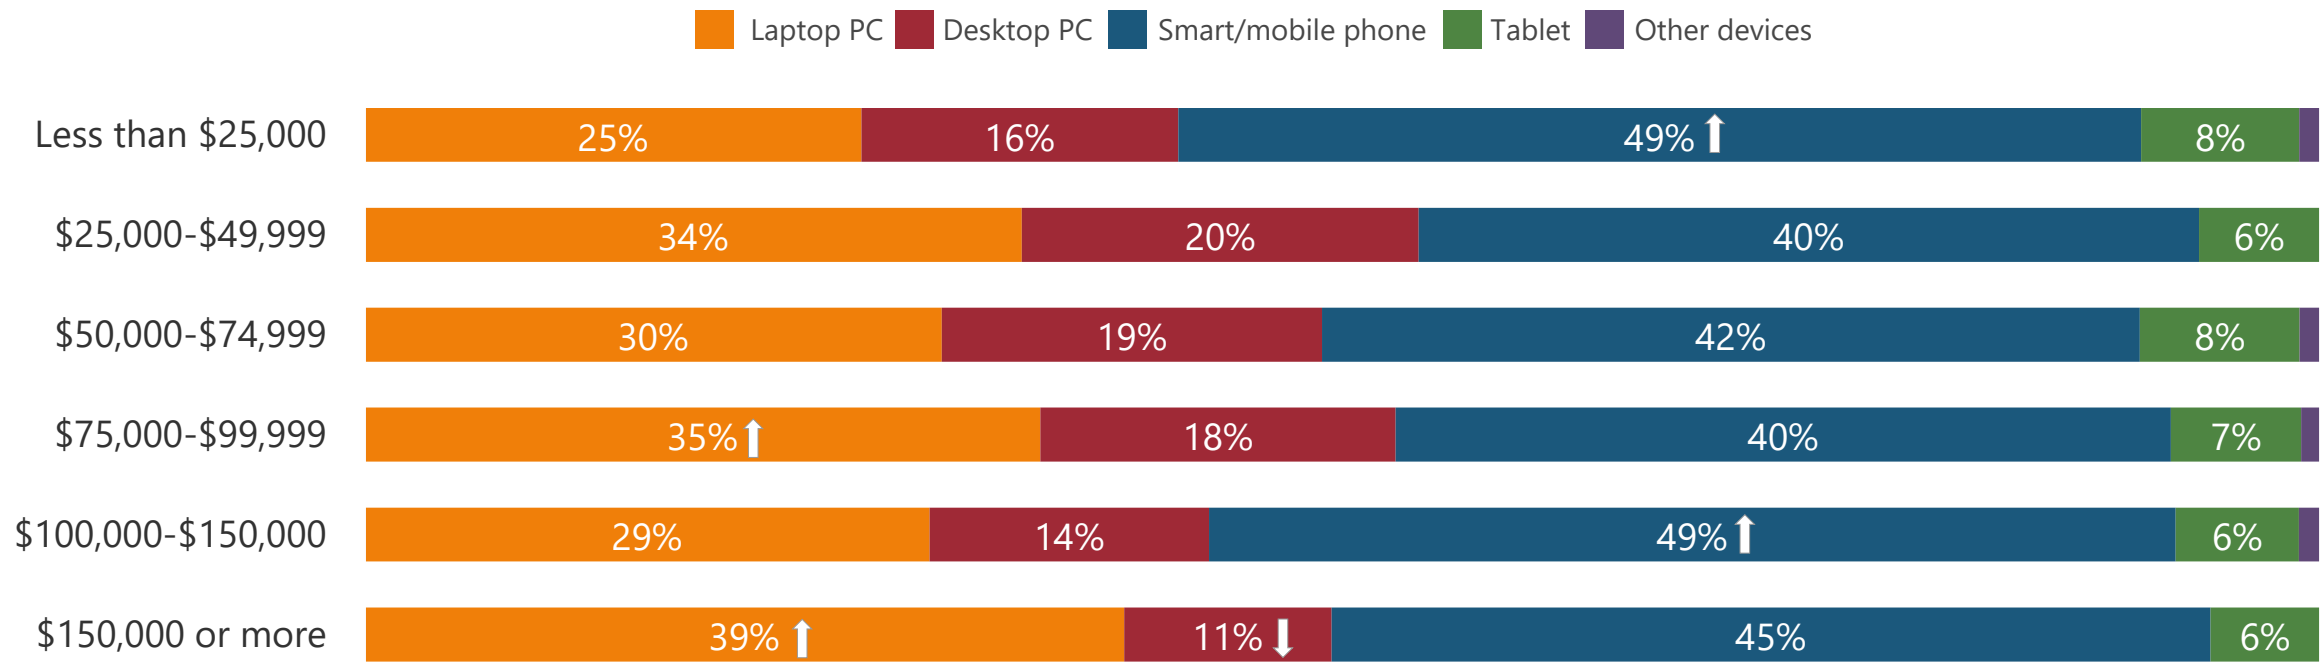

Across income levels, at least two in five use a phone as their primary device to access the internet at their residence.

Those with income under \$25K are less likely than others to use a computer as their primary device.

Those with income of \$150K or greater favor using a laptop nearly as much as their phone, while those with income between \$25K and \$100K are more likely than others to use a desktop computer.

Primary Device Used to Access the Internet at Residence: By Income

Values below 3% not shown.

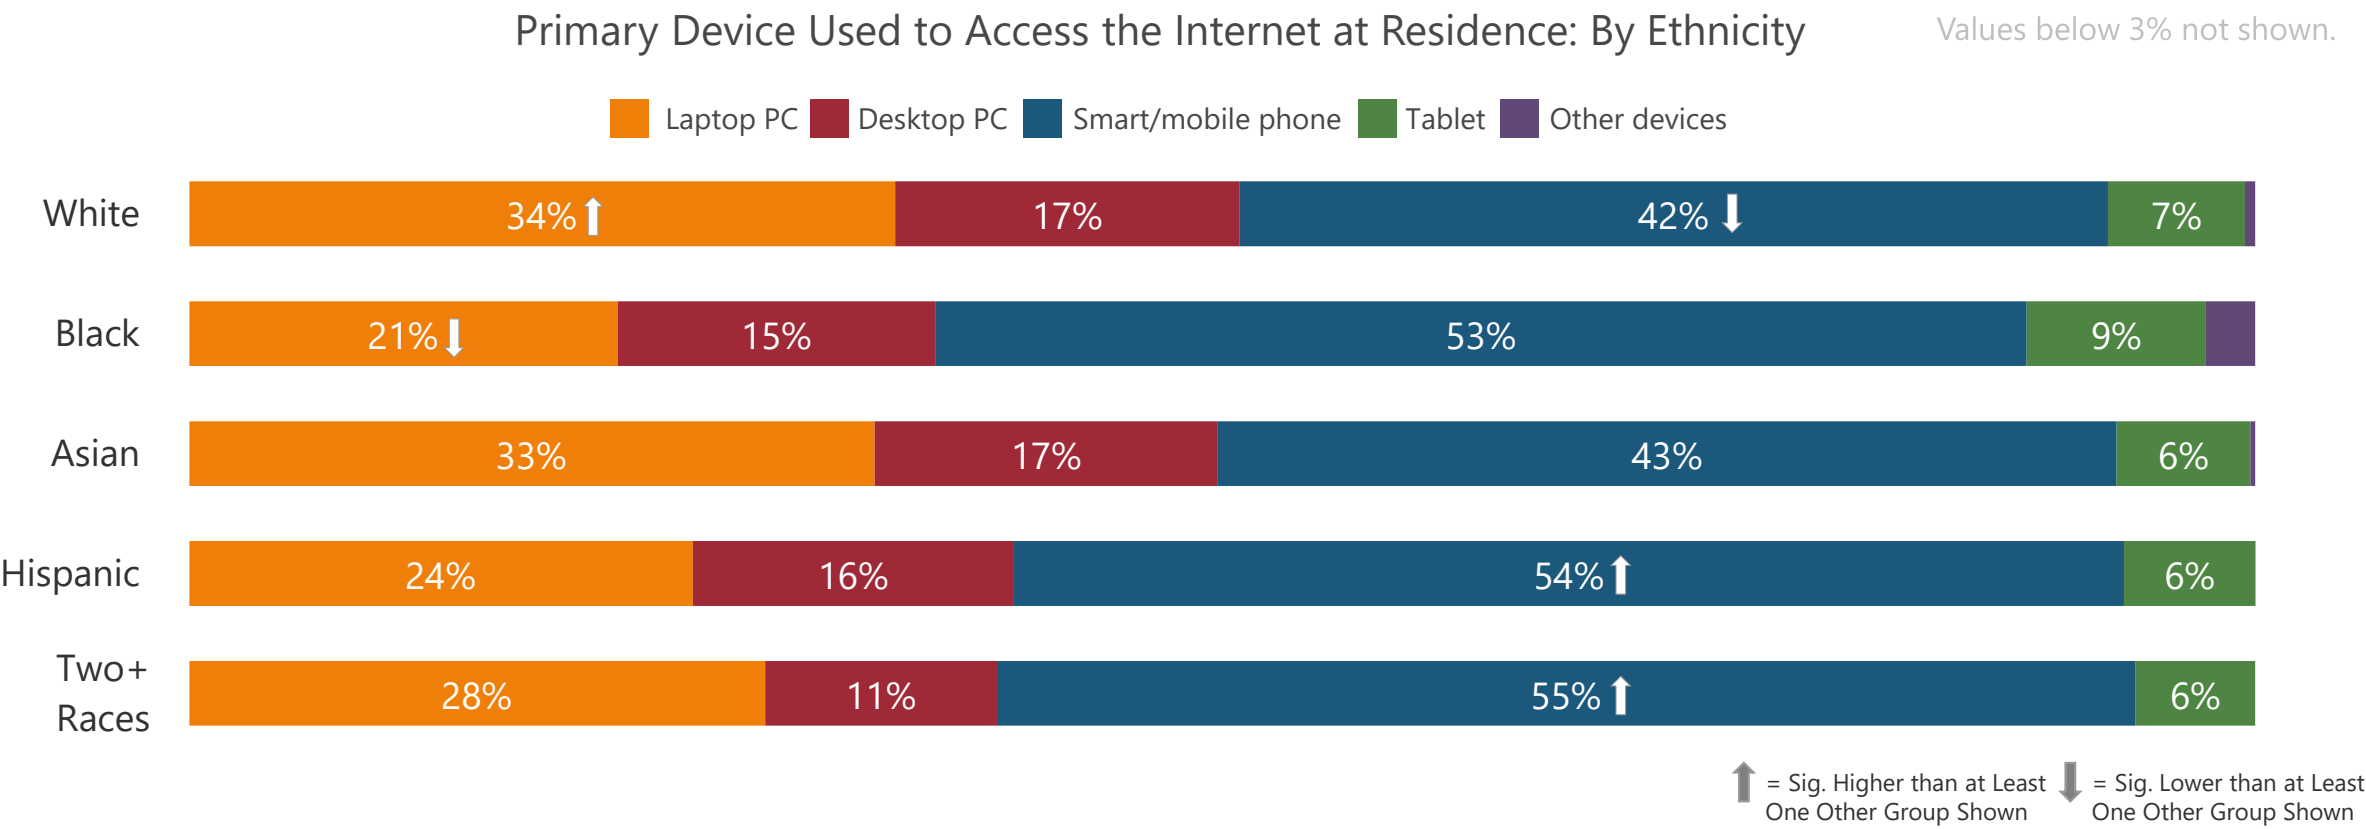

↑ = Sig. Higher than at Least One Other Group Shown
↓ = Sig. Lower than at Least One Other Group Shown

Base: Total Answering, By Income Group – <\$25K (n516), \$25K-\$50K (n487), \$50K-\$75K (n467), \$75K-\$100K (n429), \$100K-\$150K (n693), \$150K+ (n900). Individual Weight.
Q3 - Of all of the devices you have access to, which ONE device do you personally rely on or use most to access the internet in the place where you live?

Across race/ethnicity, a phone is most often the primary device used to access the internet.

However, White residents are more likely than Black residents to use a laptop computer as their primary way to access the internet when home.

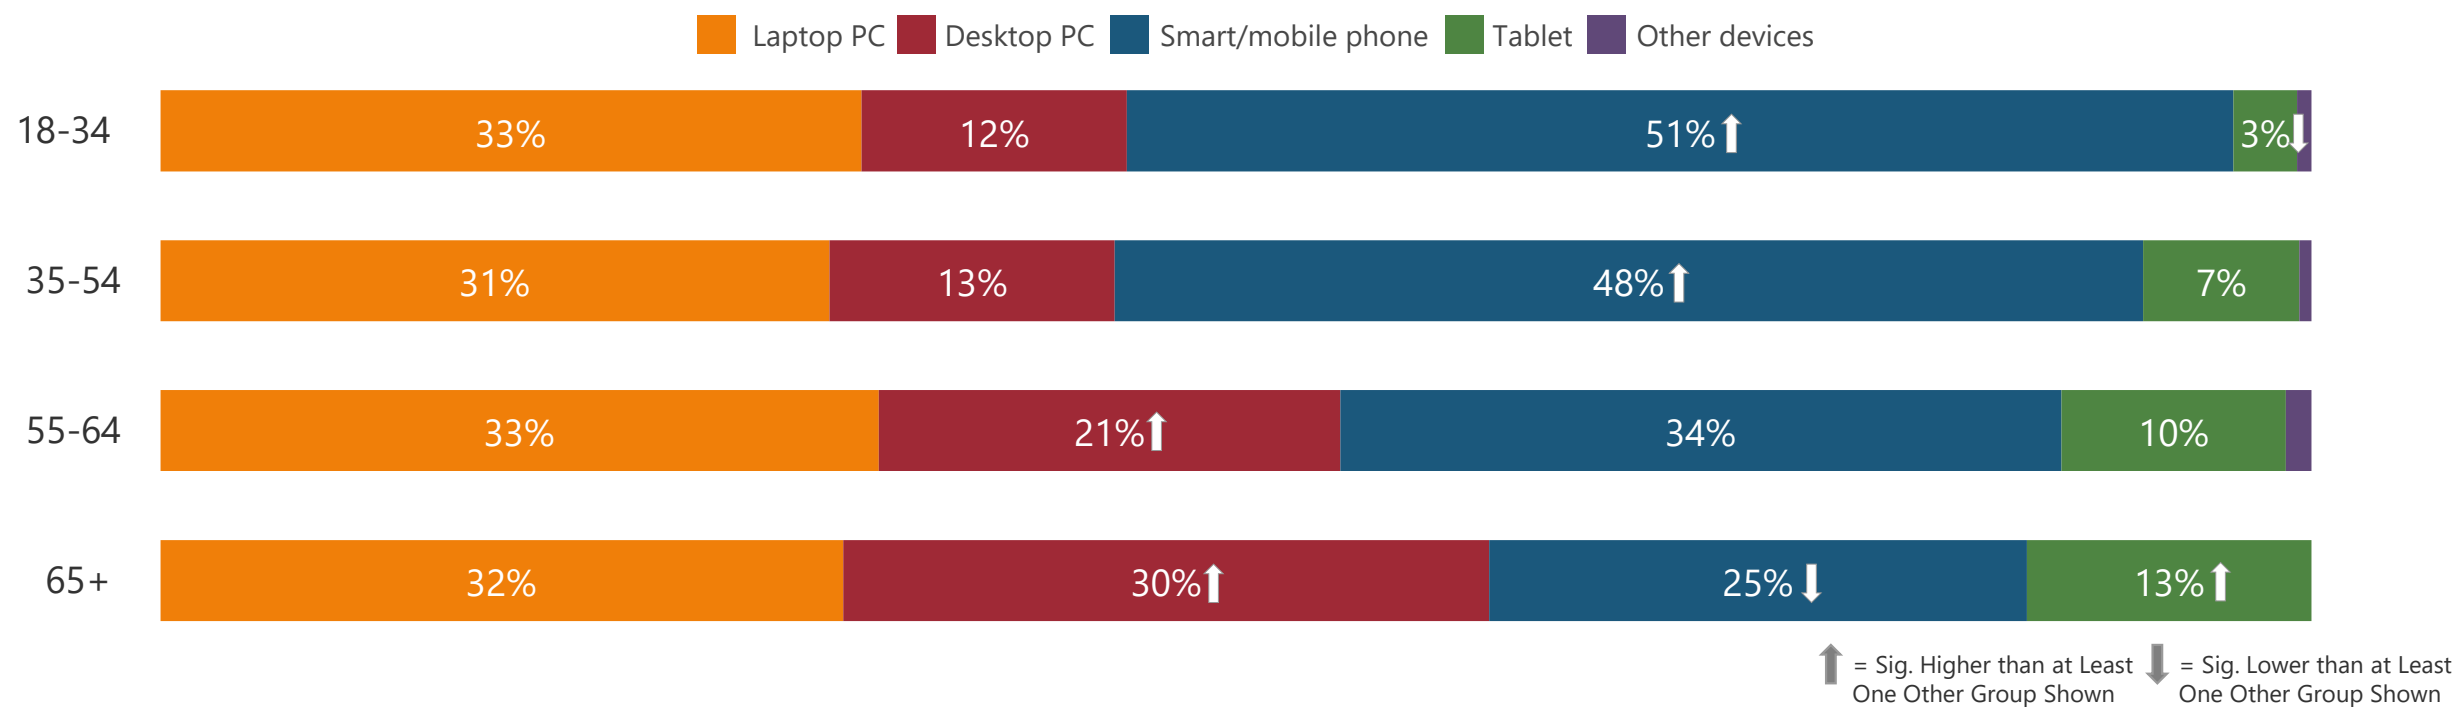

Base: Total Answering, By Ethnicity – White (n2974), Black (n148), Asian (n401), Hispanic (n161), 2+ Race (n146). Individual Weight.
Q3 - Of all of the devices you have access to, which ONE device do you personally rely on or use most to access the internet in the place where you live?

Younger residents (under 55 years of age) rely on their phone the most to access the internet.

Older residents are more evenly distributed among various devices as the one they rely on the most often for internet access: laptop, phone, or desktop computer.

Primary Device Used to Access the Internet at Residence: By Age Group Values below 3% not shown.

Base: Total Answering, By Age Group – 18-34 (n628), 35-54 (n1494), 55-64 (n609), 65+ (n810). Individual Weight.
Q3 - Of all of the devices you have access to, which ONE device do you personally rely on or use most to access the internet in the place where you live?

Appendix: Digital Skills

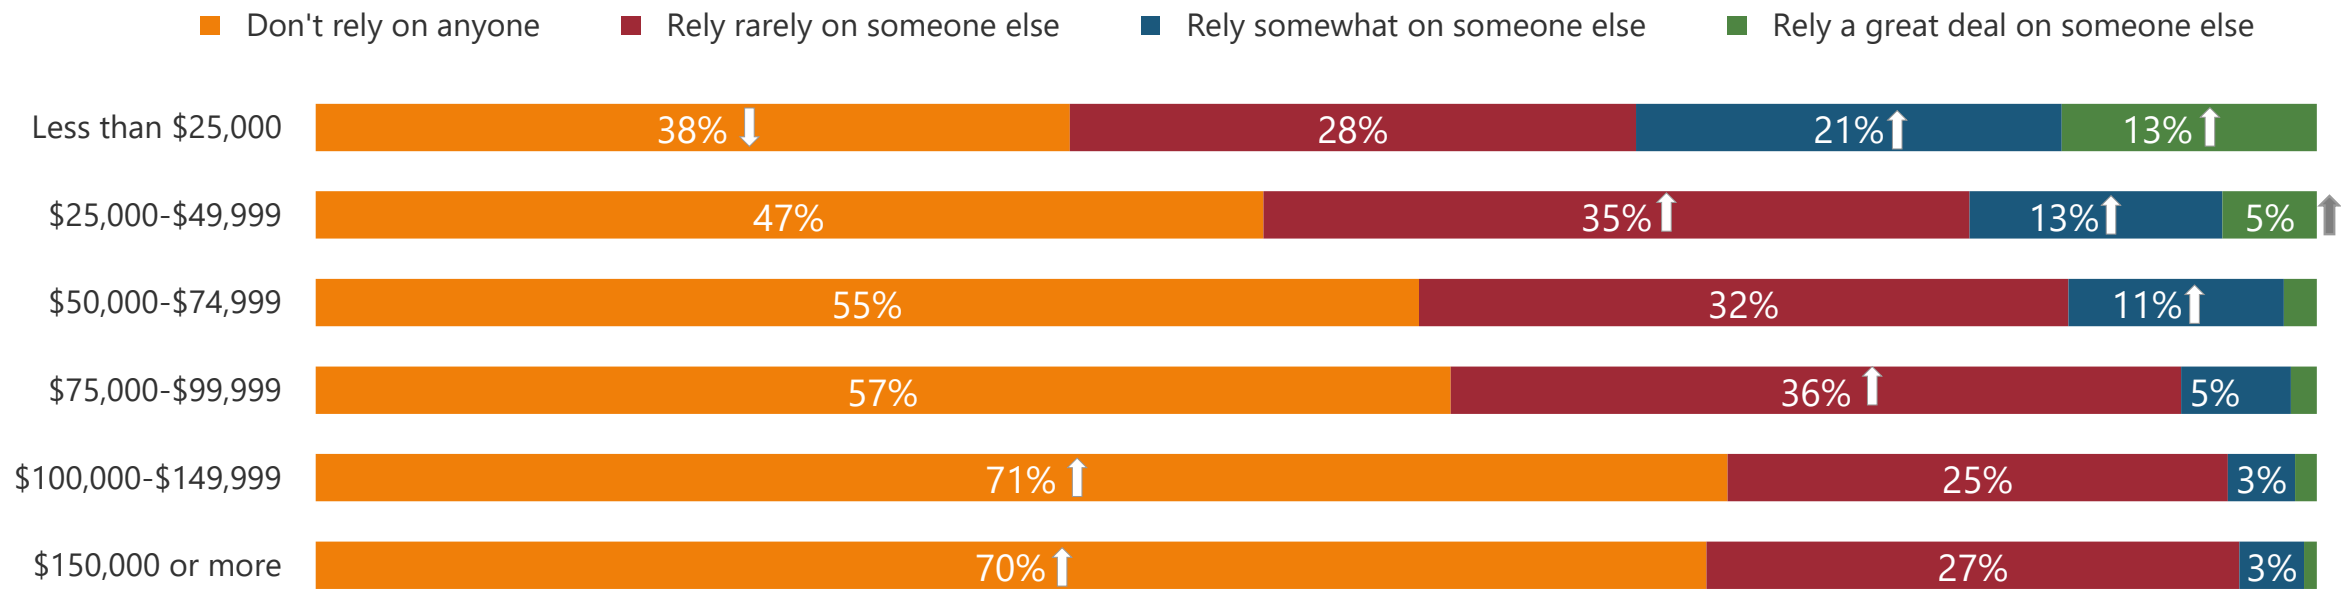

- Reliance on Others to Help with Access and Navigation of the Internet

Residents with more household income are less likely to need assistance to access and navigate the internet.

Only one third (38%) of respondents with less than \$25,000 in household income are able to use the internet independently and are significantly more likely than any other income group to need a “great deal” of help from someone else to access and navigate the internet.

Reliance on Others to Help with Access and Navigation of the Internet: By Income

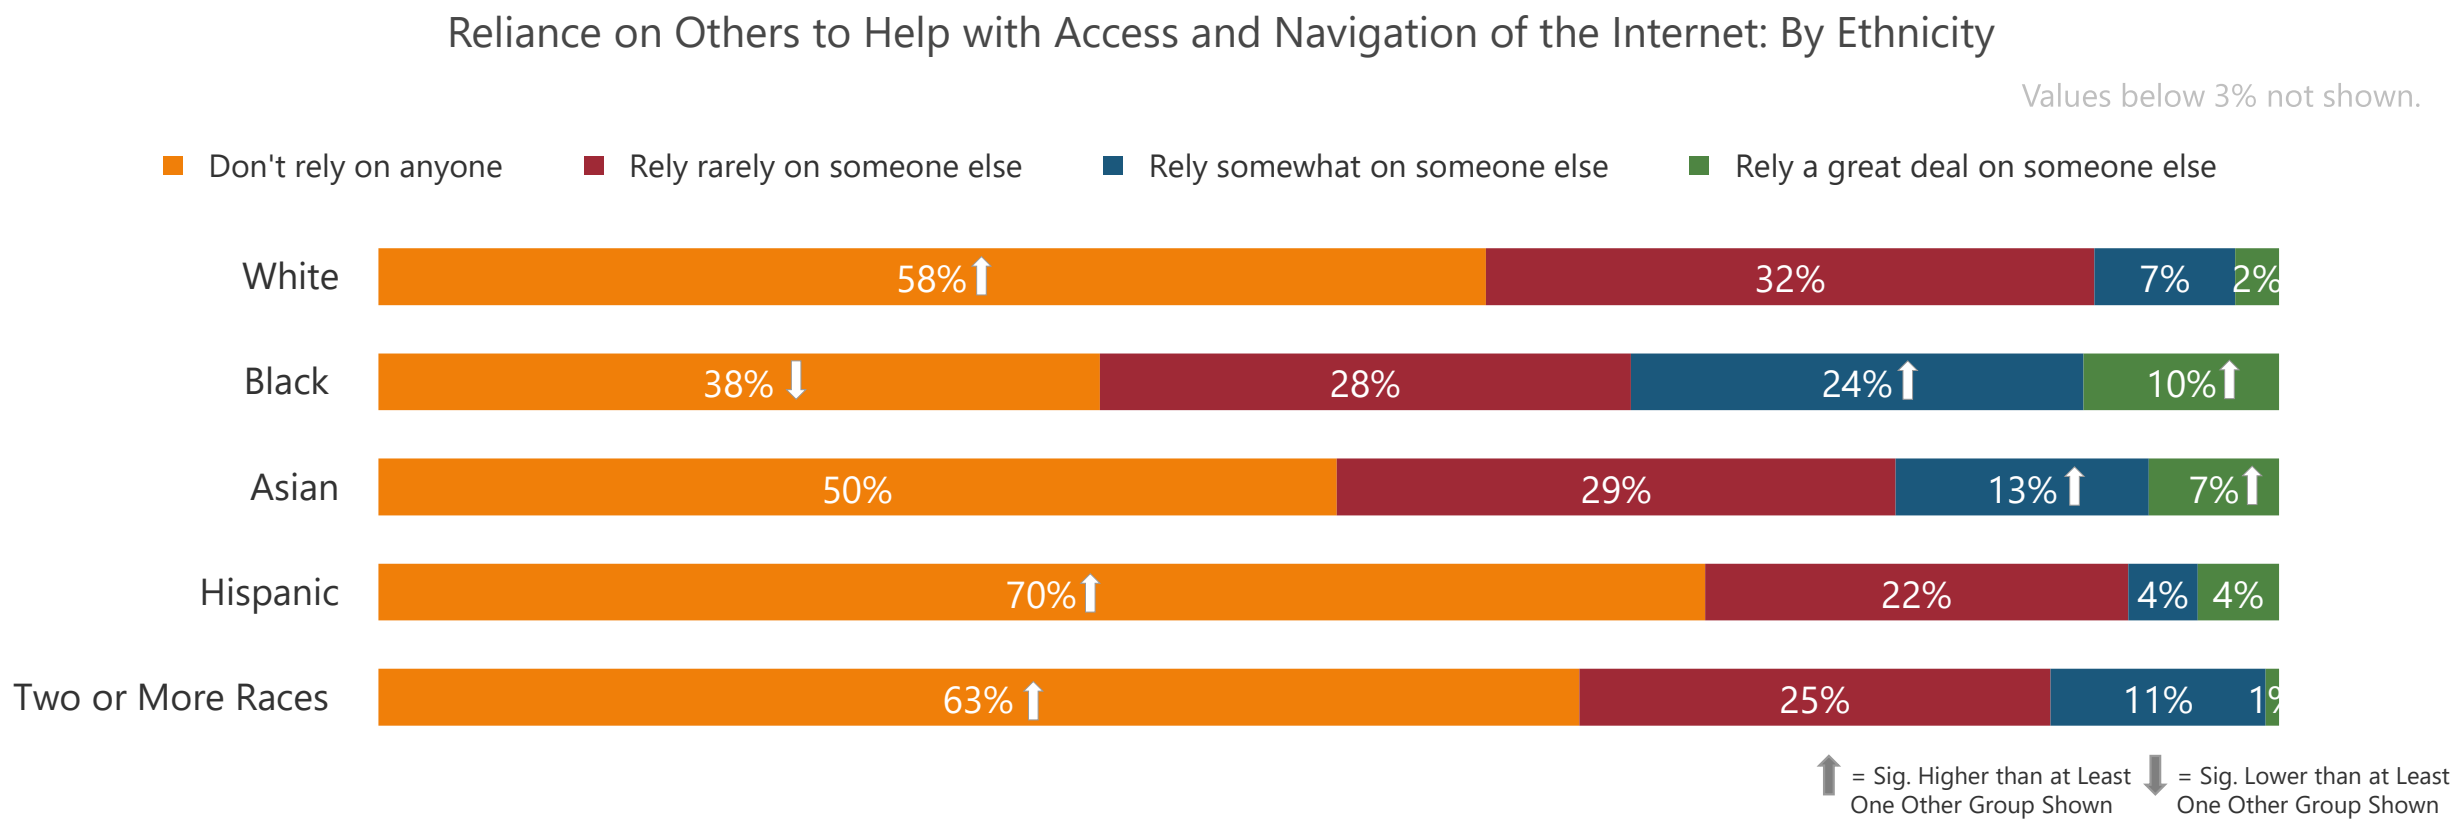

Values below 3% not shown.

↑ = Sig. Higher than at Least One Other Group Shown ↓ = Sig. Lower than at Least One Other Group Shown

Reliance on others for help accessing or navigating the internet is highest among Black residents.

At least half of respondents who are White, Asian, Hispanic, or Mixed (two or more races) can use the internet without any help from others, while just over one third (38%) of Black respondents use the internet independently.

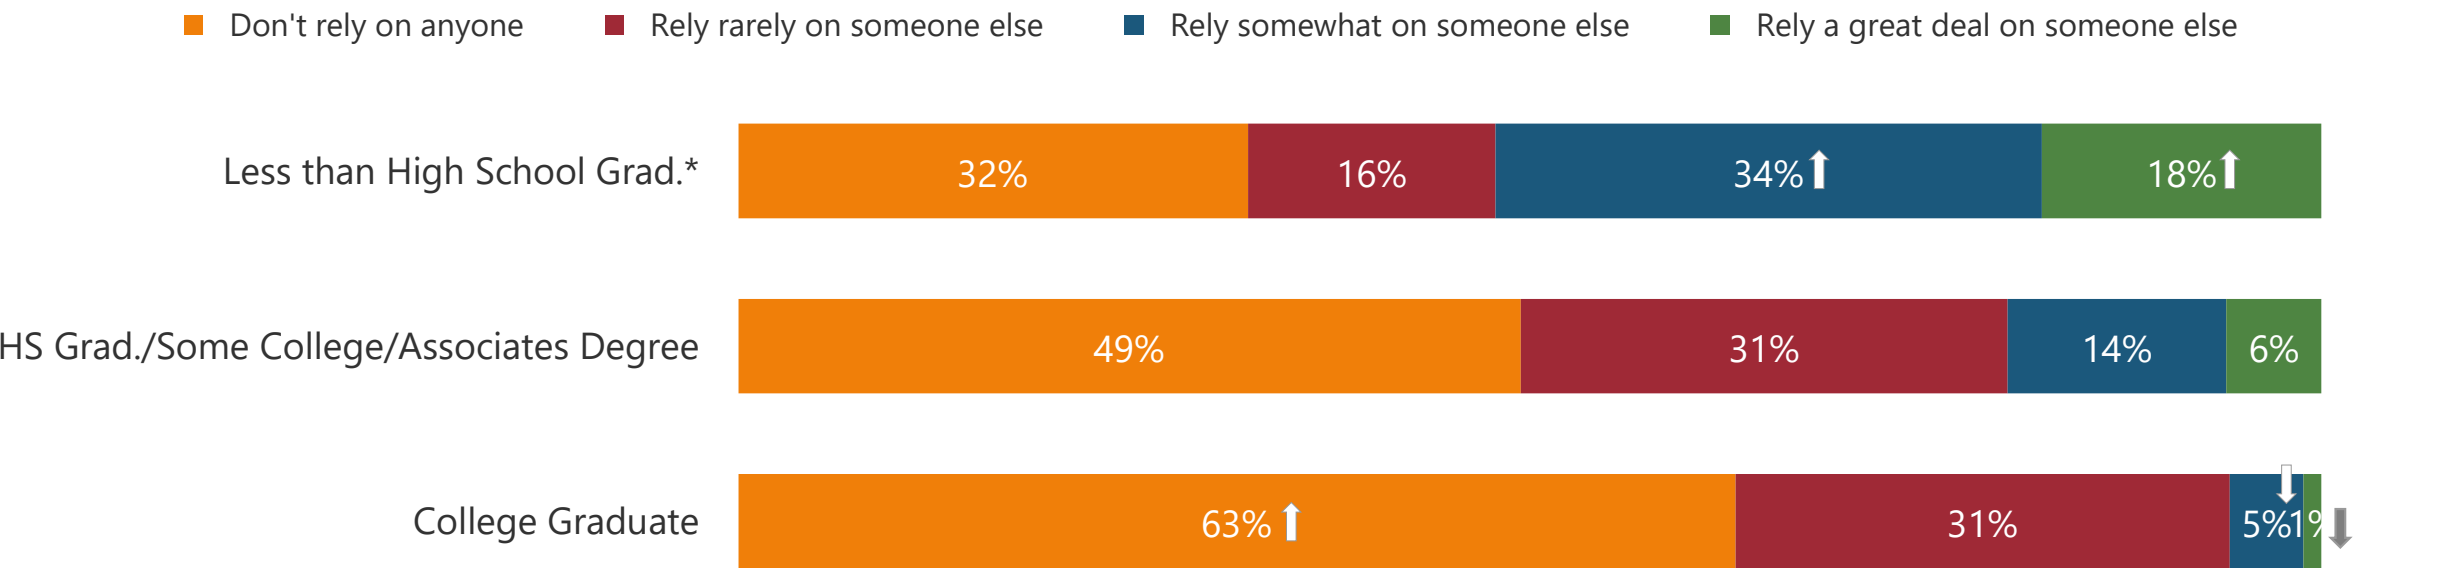

The reliance for help accessing and navigating the internet decreases among those with further education.

Residents that have not received a high school diploma or equivalent are the most likely to need at least some assistance to use the internet.

Reliance on Others to Help with Access and Navigation of the Internet: By Education

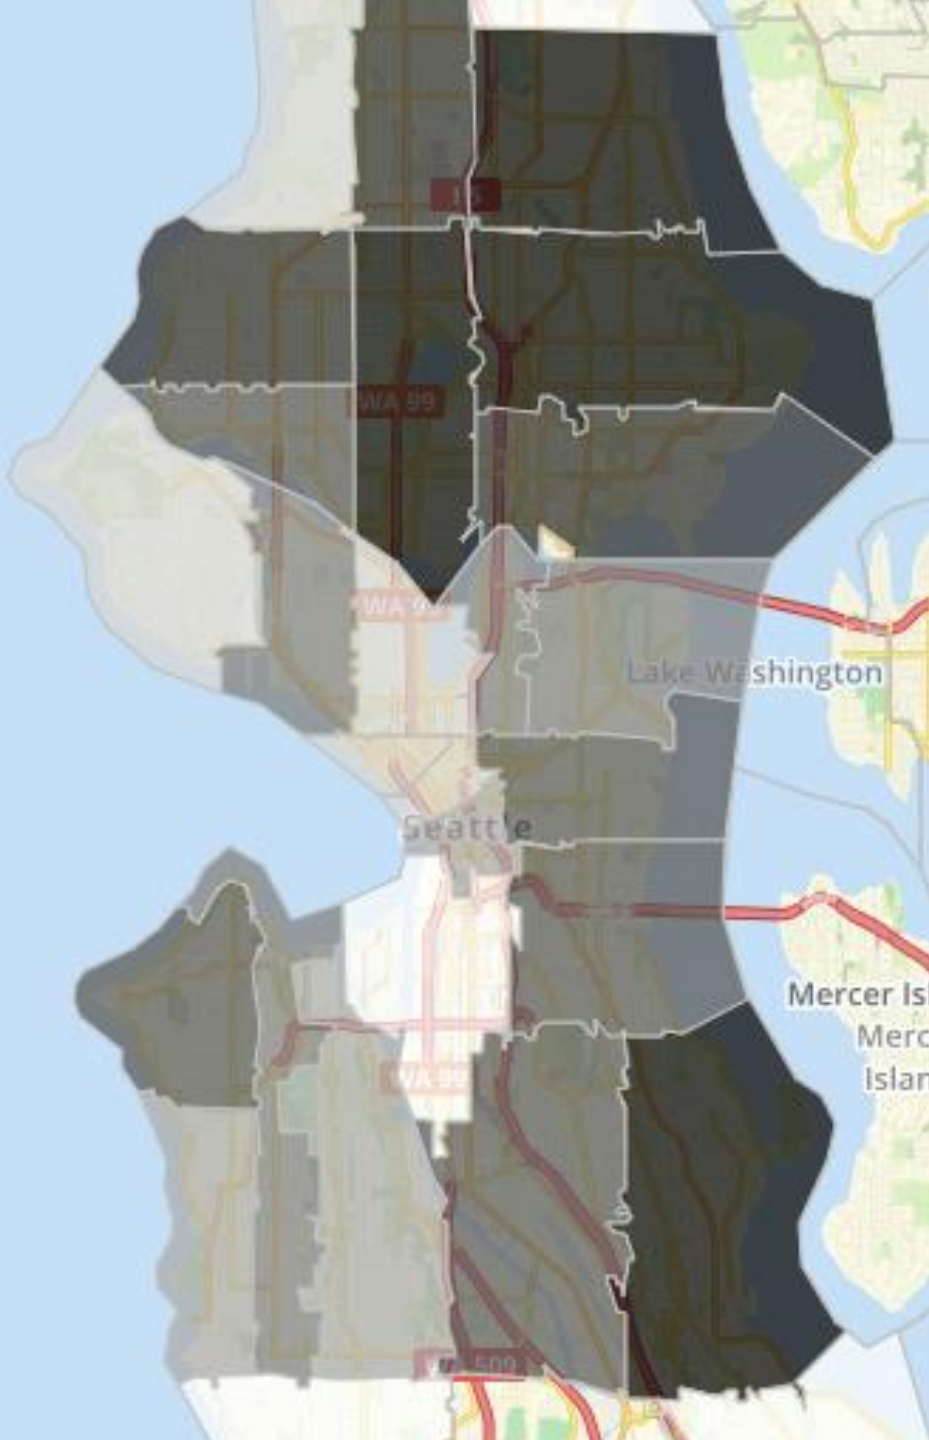

Values below 3% not shown.

Base: Total Answering – < HS Grad, (n54*), HS Grad/Some College/Associates Degree (n947), College Graduate (n3044)
Individual Weight. *Limited sample size. Sub-segment analysis warrants further research and/or a large sample size.
Q18 - How much do you rely on others to help you with the skills needed to access and navigate the internet?
